

Version	Date	Change	Change screen	Person
7.0.1	2016/07/01	Redesigned ergo based on 5.2.5 plus improvements. Moved to Material Design Changelog provided externally.	All screens.	Joren
7.0.3	2016/07/28	Updated engineer feedback. Added always-on release notes (if available) Removed 'recently updated'	All screens.	Joren
7.0.3	2016/08/10	Added FOTA/AOTA only feature Clarified that 'report' is for user only, reporting happens in back end	FOTA/AOTA exclusive ND1	Joren
7.0.3.1	2016/09/23	Added notification to announce new available app Added Setting to turn notification for new available app off	NIO 4.1 - Settings	Joren
7.0.3.2	2016/10/20	Updated Beta logic Added BETA entrance to settings, updated advanced mode Updated enter advanced mode style Clarified notifications in Android N style (extra page) Added App detail page	Beta pages (updated) 4.1 (settings) 5.0 (help) Android N pages (added)	Joren

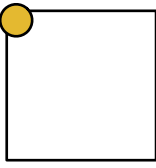

The app can be opened in two ways.

0.1 - Using App Icon

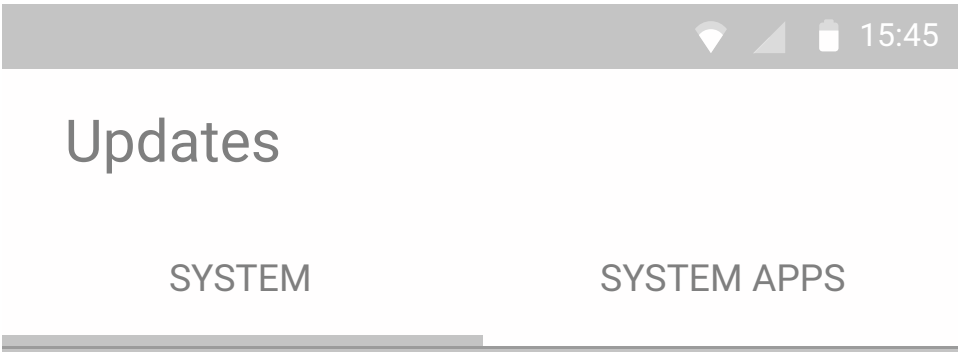

To home
screen
1.0

Updates app icon will open Updates screen.
When system update (not app) has been checked
in the background and is available for download
(if auto-download not enabled) or for installation,
show a dot on icon:

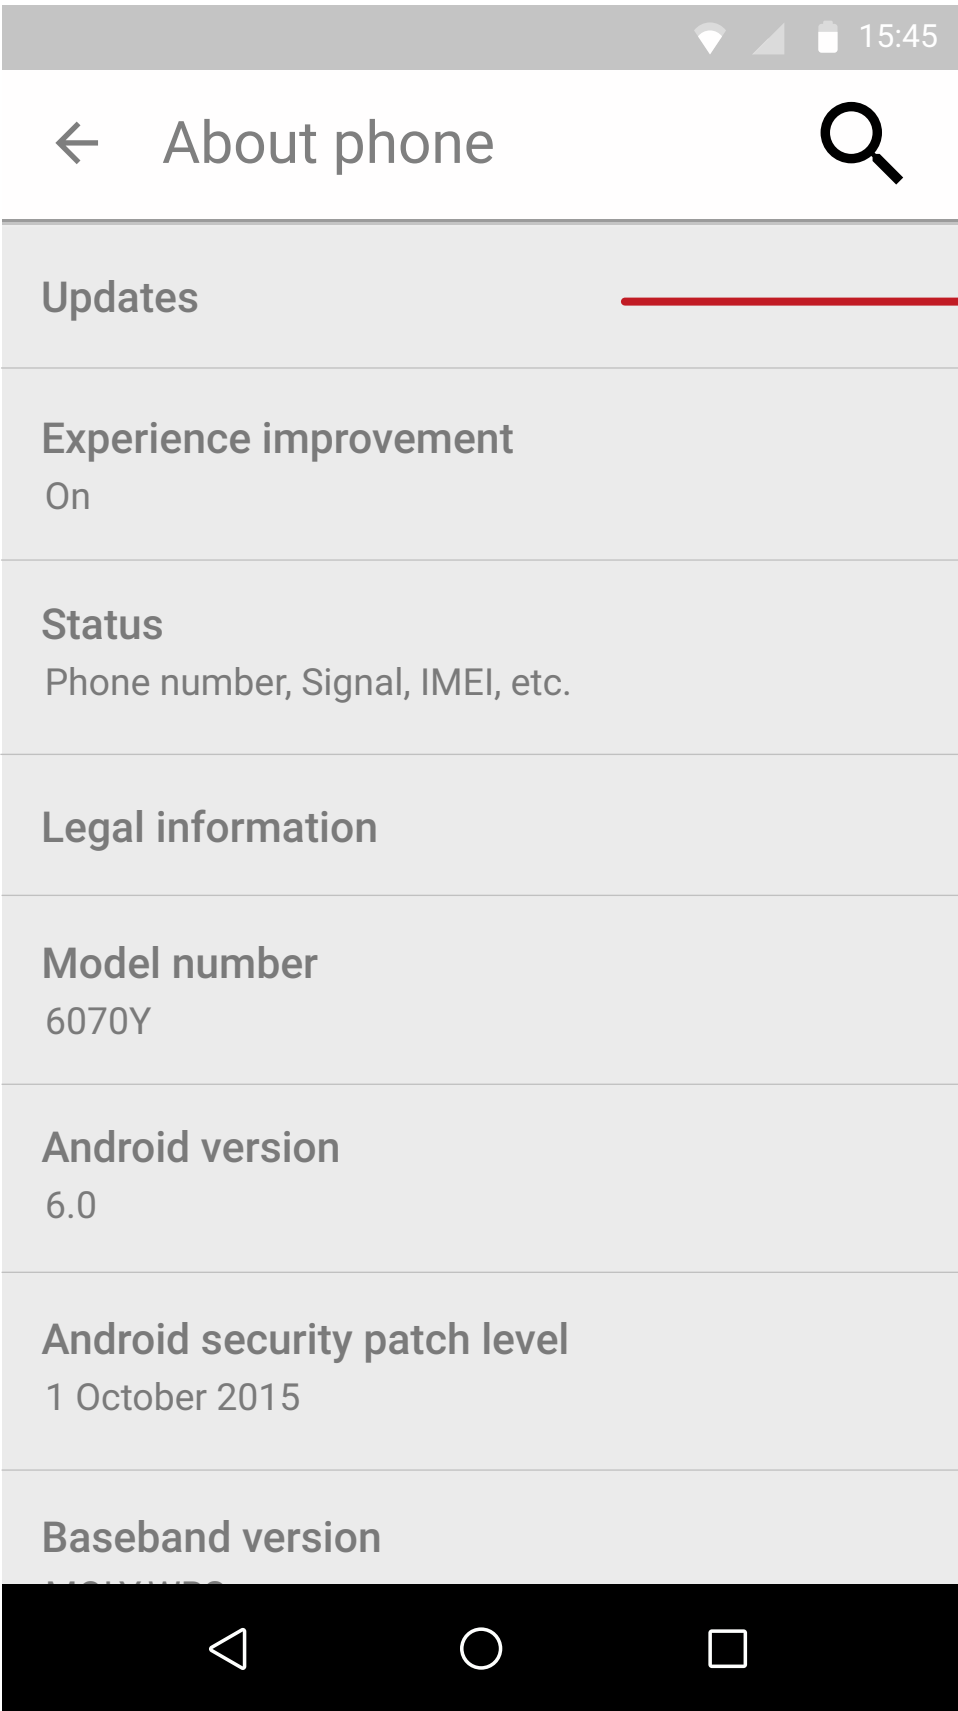

Updates

Using the app icon will not show a back arrow in
the application:

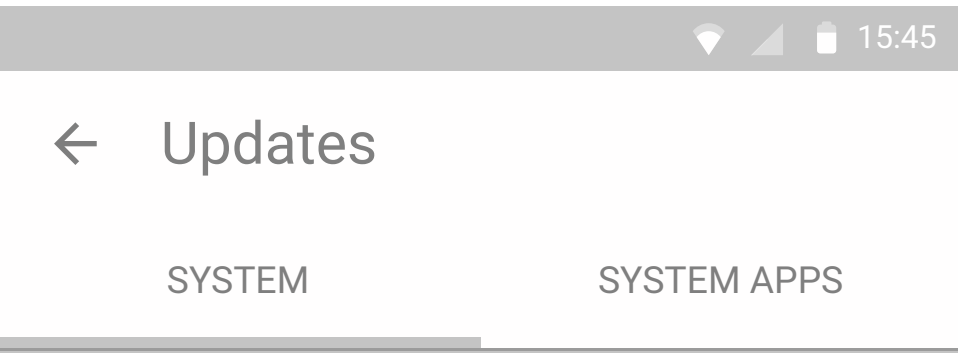

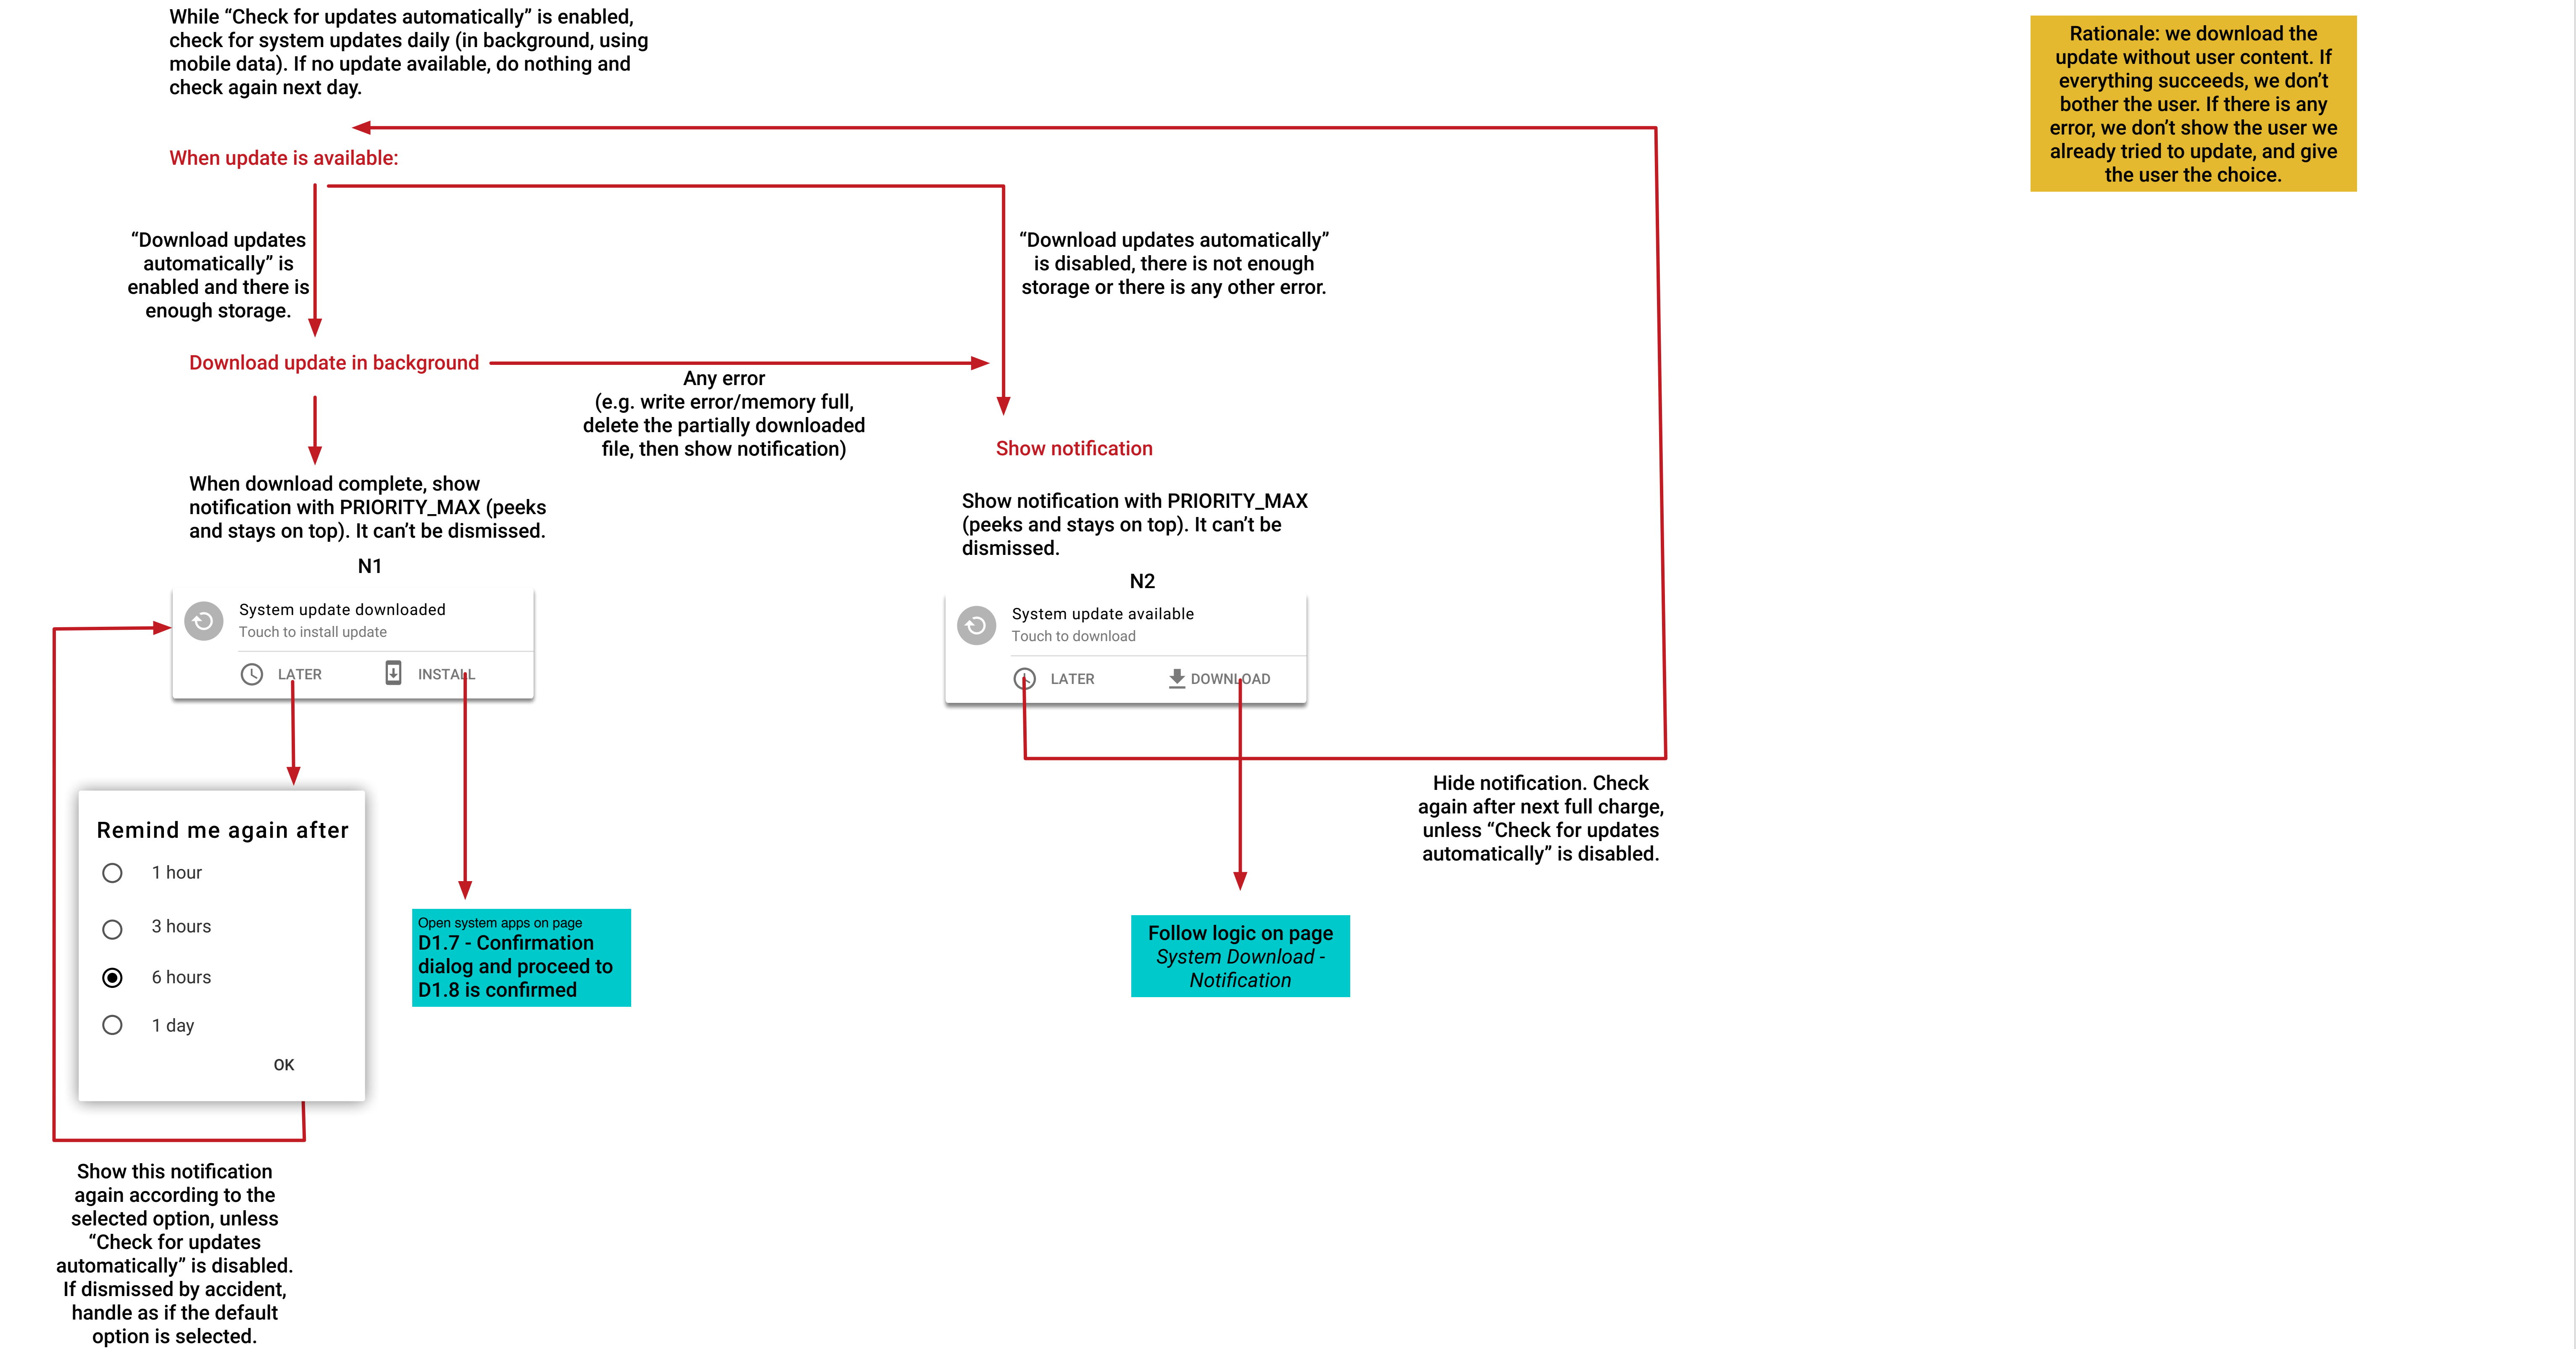

0.2 - Using the settings menu

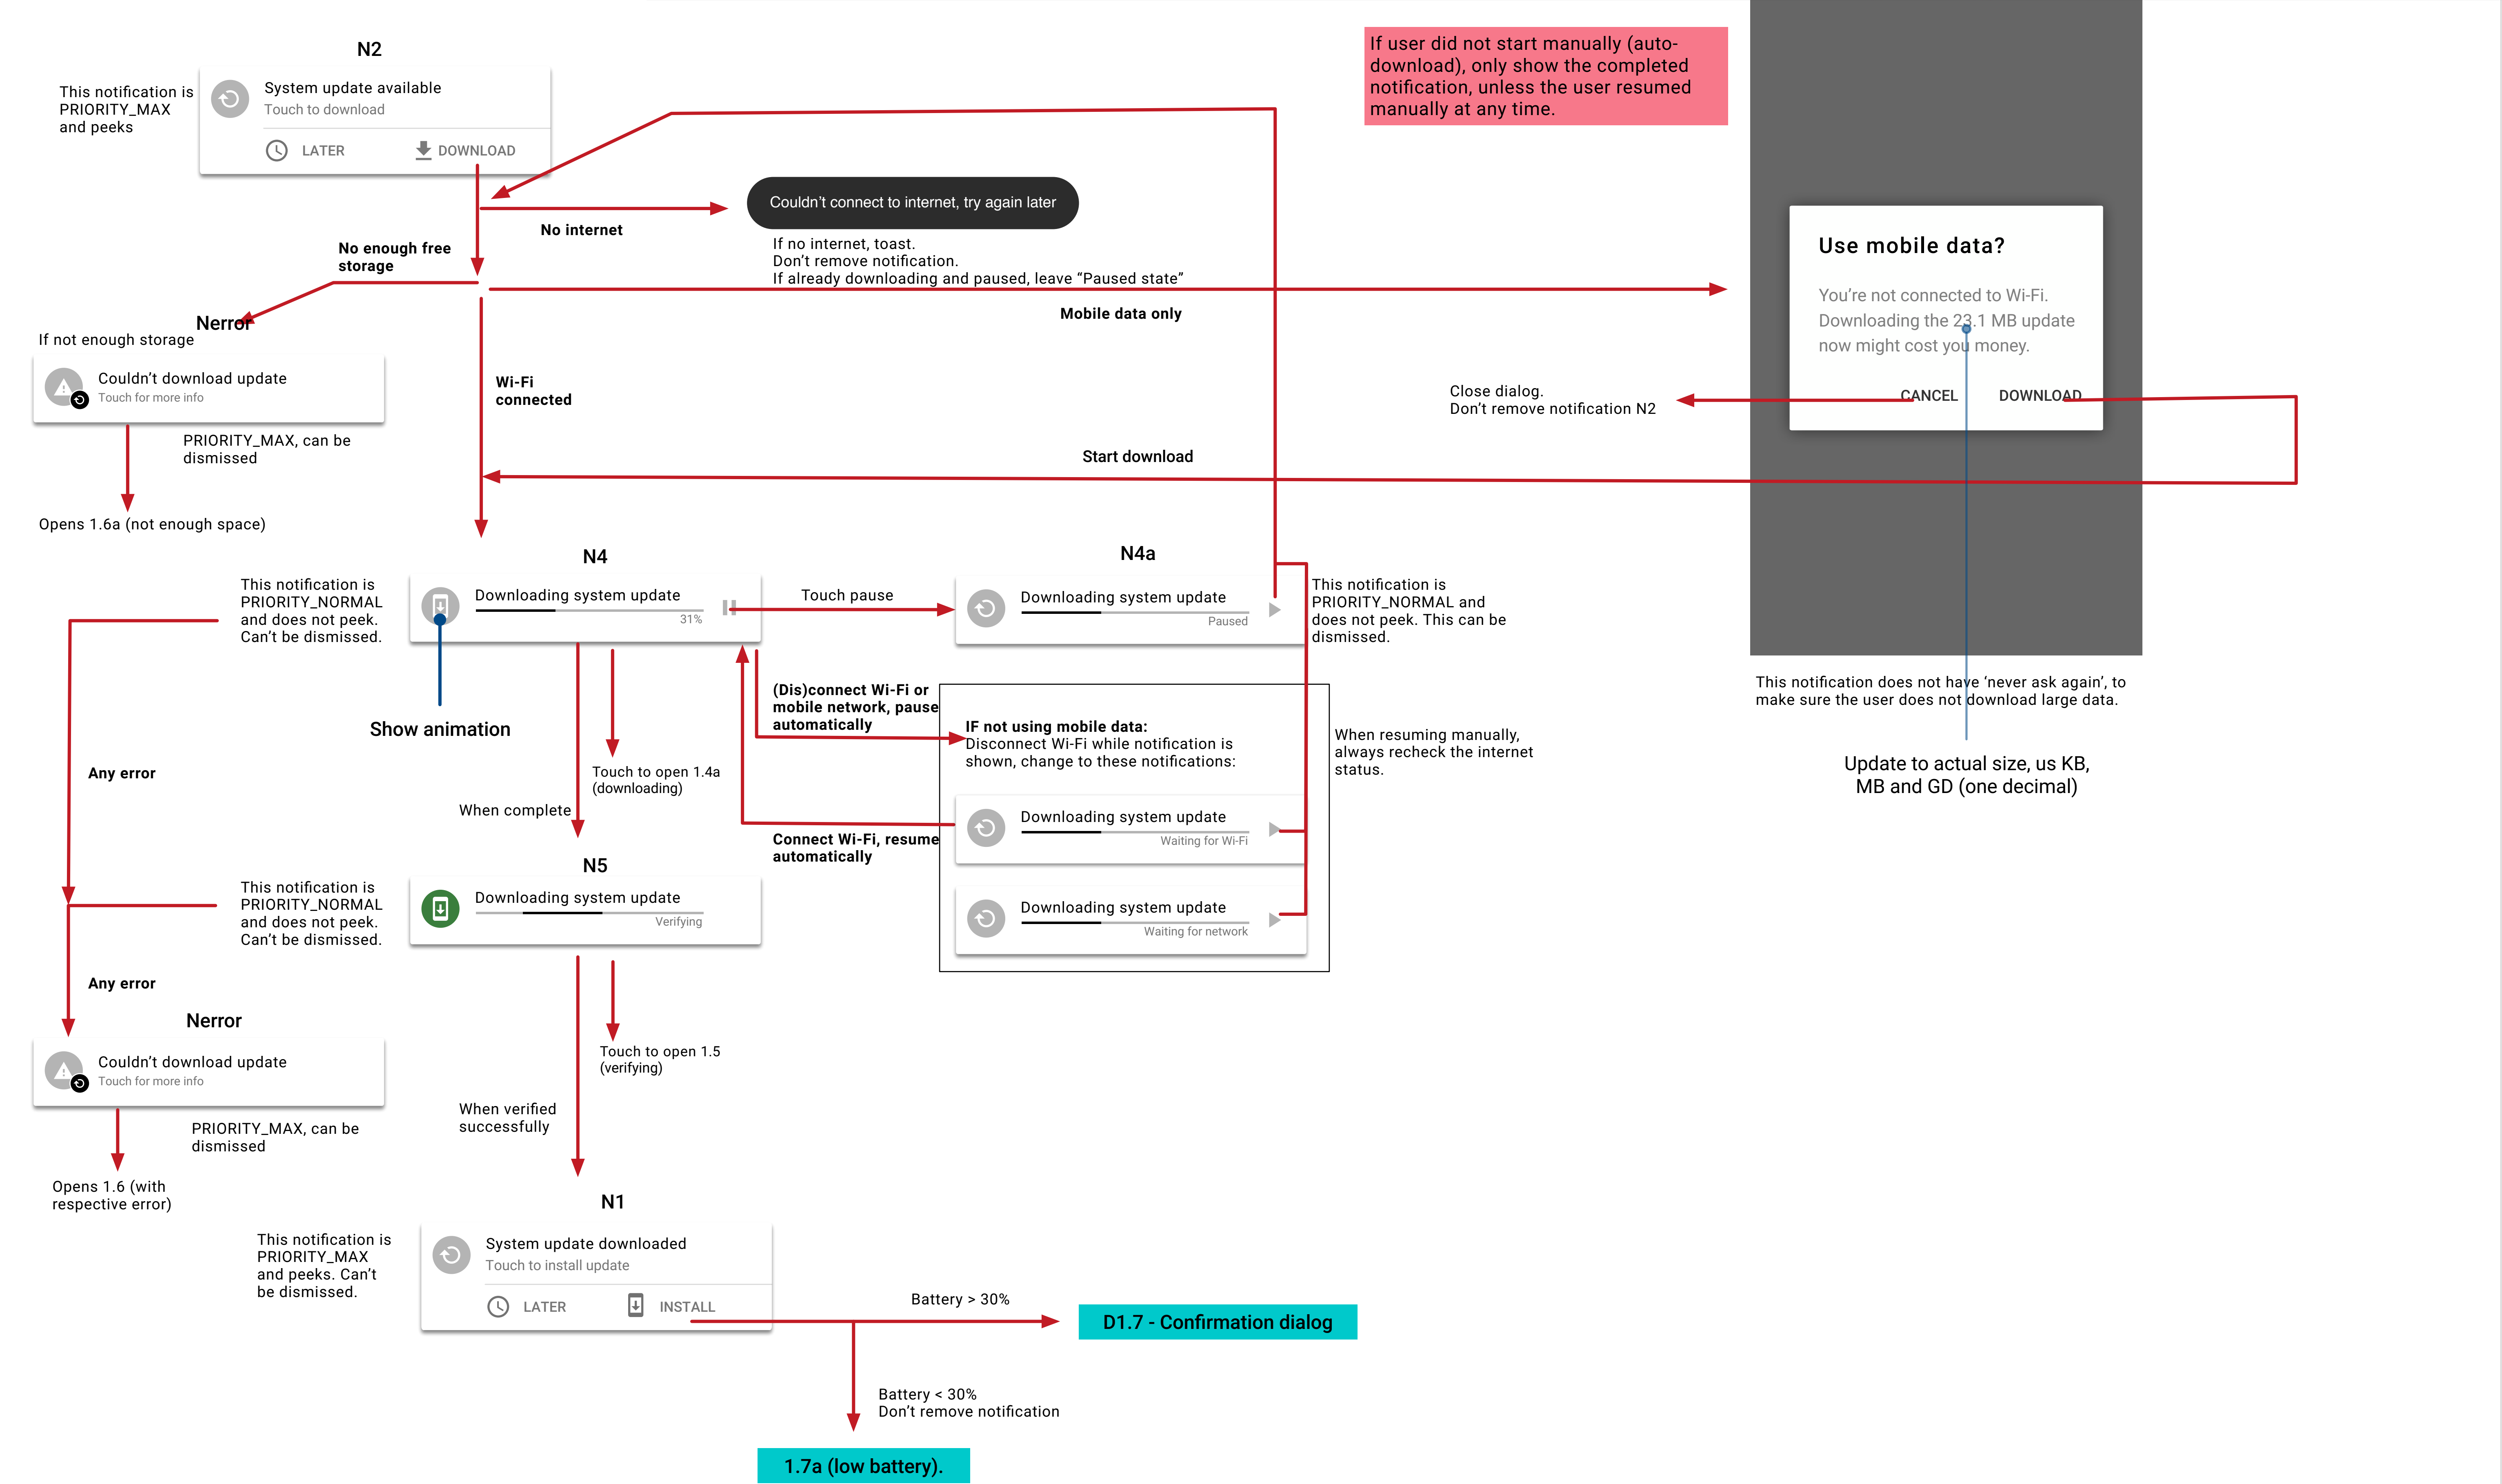

To home
screen
1.0

In 'About phone' submenu of the Settings, there is
updates entrance. If used, Updates will
have a back button in App bar that returns to
"About phone".

1.6 - Home screen (error)

Depending on error, change subtext (underneath 'Couldn't download update):

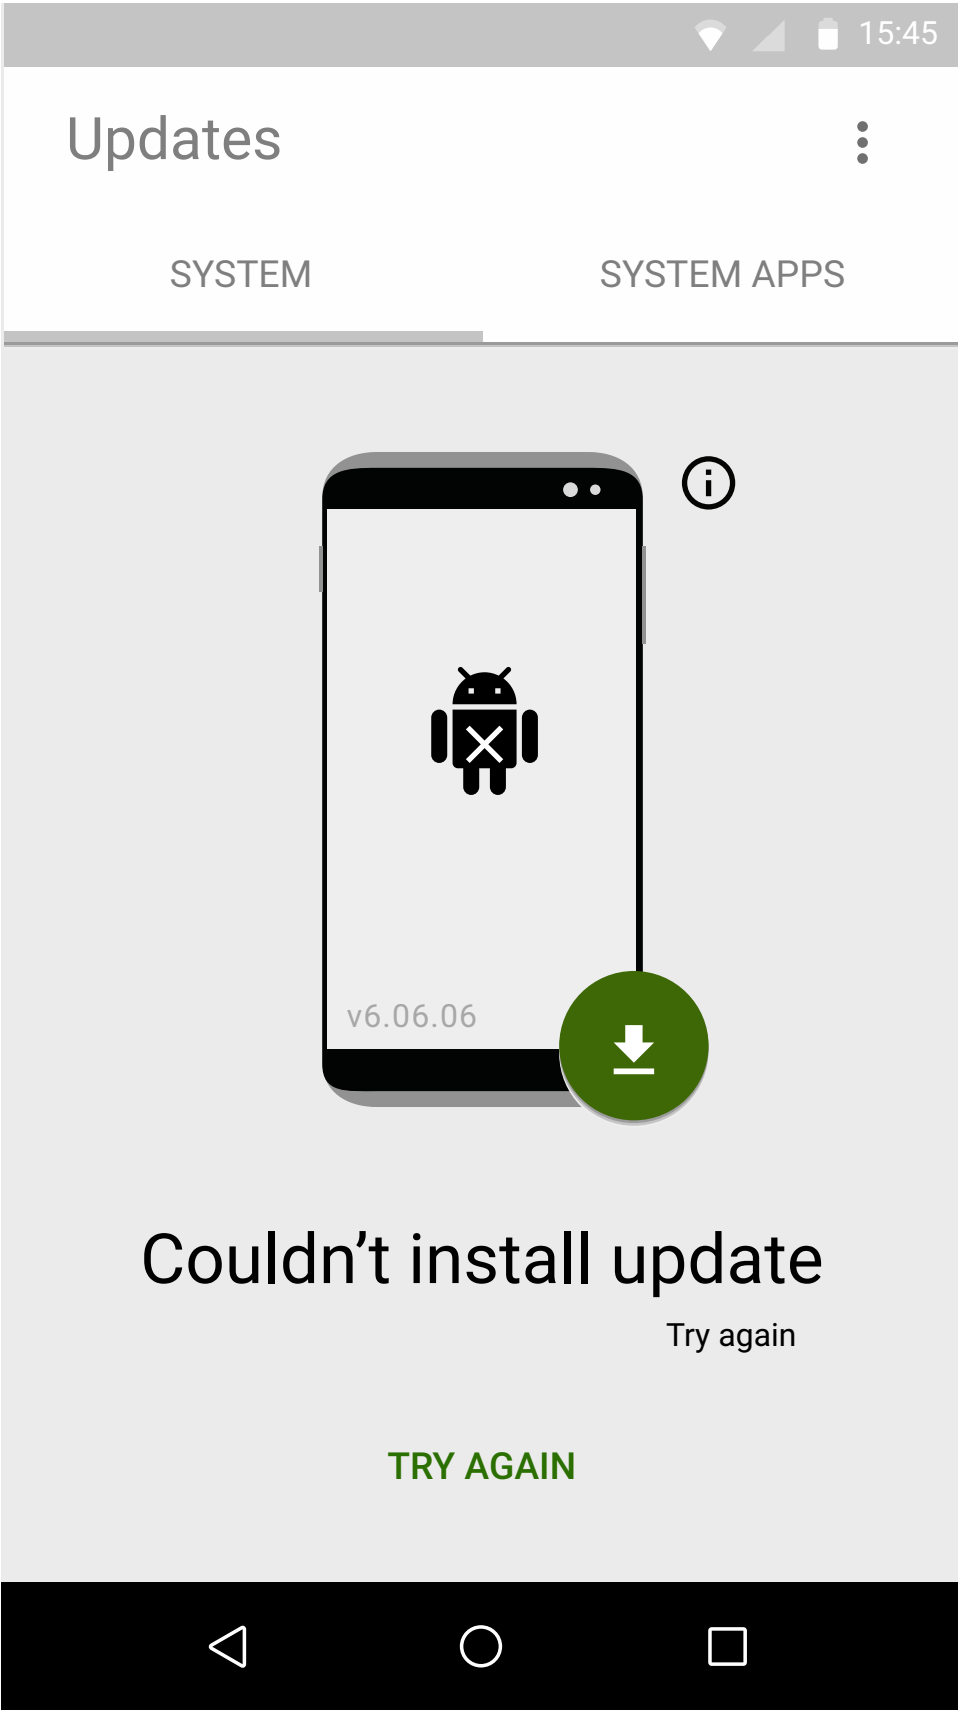

If storage full:
"Storage full, free up storage and try again."

If verification failed:
"File corrupted, try again".

If SD card removed
"SD card removed, try again".

When downloaded, change progress indicator to non-timed indicator while verifying

1.6b - Home screen (install error)

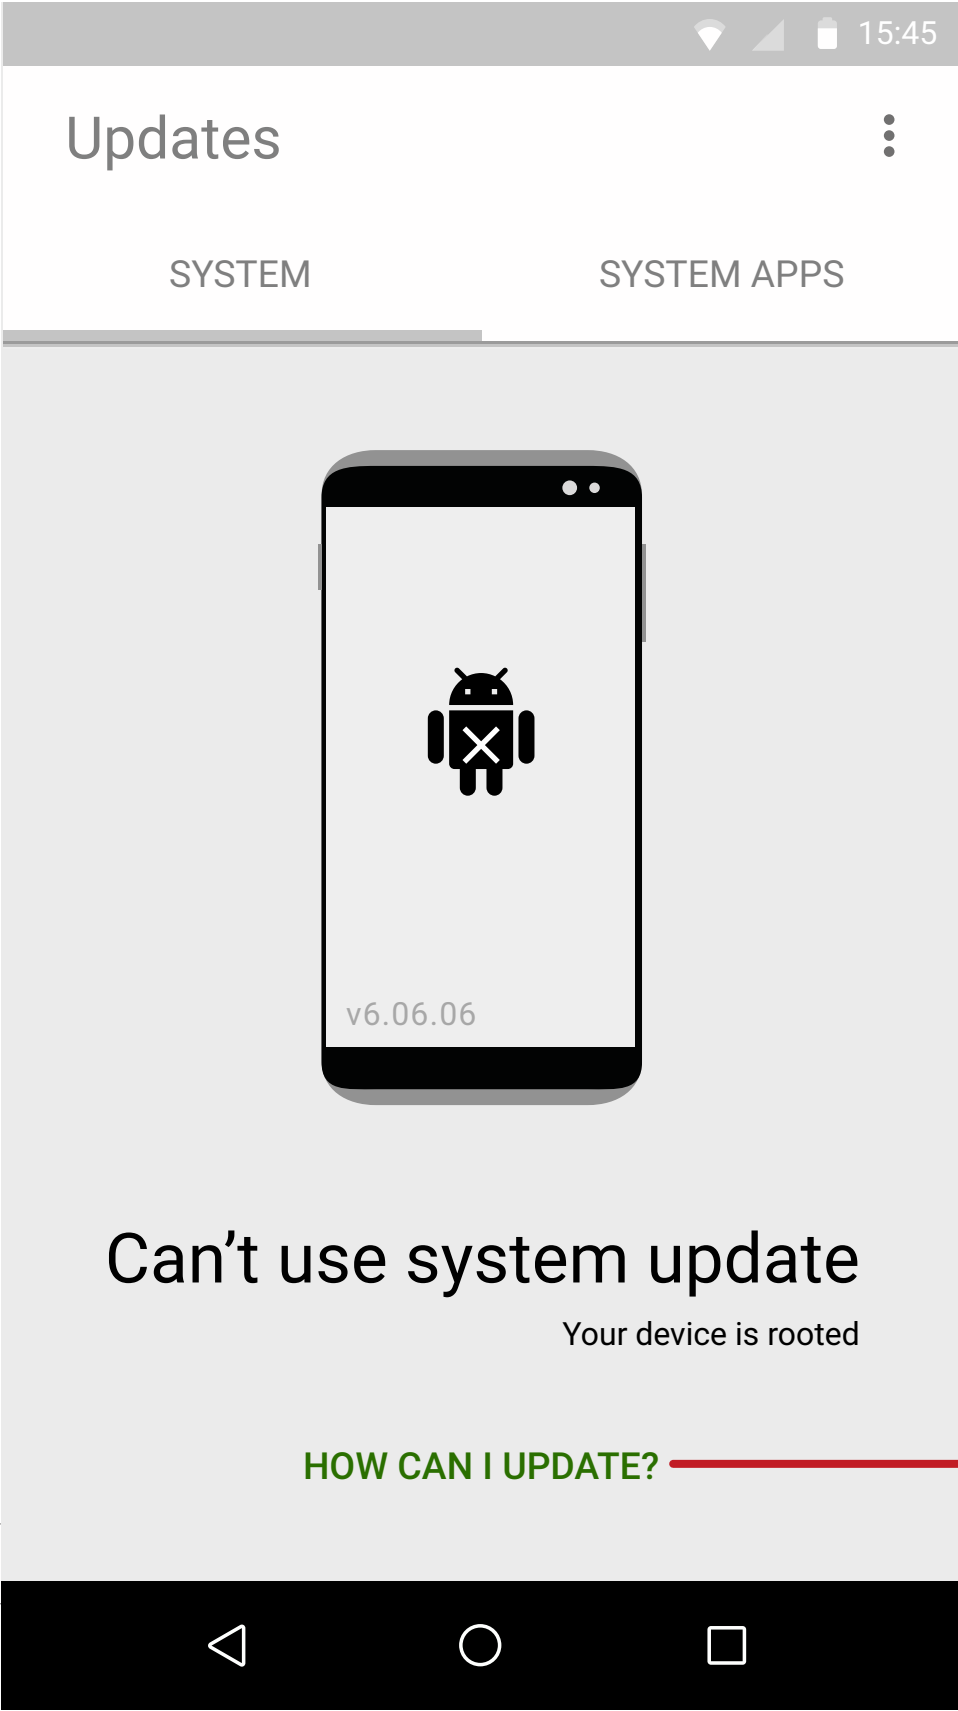

Depending on error, change subtext (underneath 'Couldn't download update):

If verification failed:
"File corrupted, download again".
and change button to 'DOWNLOAD AGAIN'

If SD card removed
"SD card removed, download again".

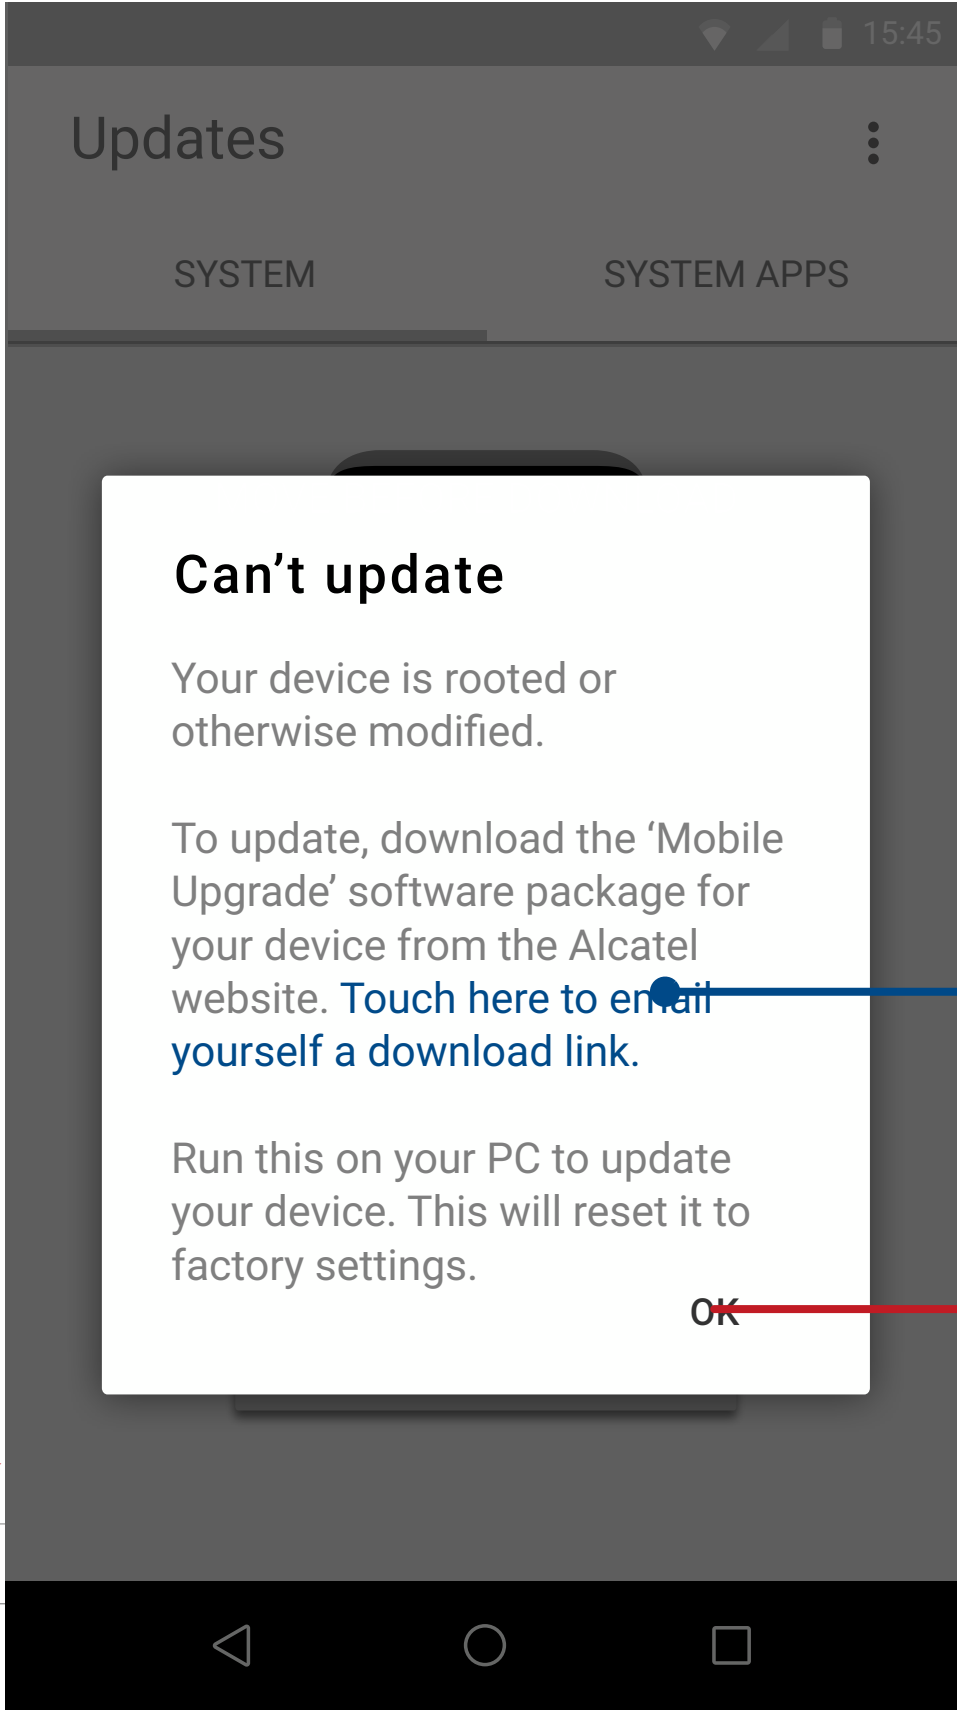

When downloaded, change progress indicator to non-timed indicator while verifying

1.6c - Home screen (rooted)

If the device is rooted, don't check for system updates, and always show this screen in the "System" tab for updates.

D1.7a - Rooted dialog

Touch this to initiate an email share intent with putExtra's

1. If the device has an associated email address, use the **primary email address** for the putExtra(Intent.EXTRA_EMAIL). If it doesn't have an associated address, don't.
2. For the putExtra(Intent.EXTRA_SUBJECT) use:
Download location for Mobile Upgrade
3. For the putExtra(intent.EXTRA_TEXT) use:
To update your mobile device, download the "System Upgrade" PC package for your device on this website:
<http://www.alcatelonetouch.com/global-en/support/softwareUpgrade/list>

Install and run the downloaded PC package, and follow the instructions.

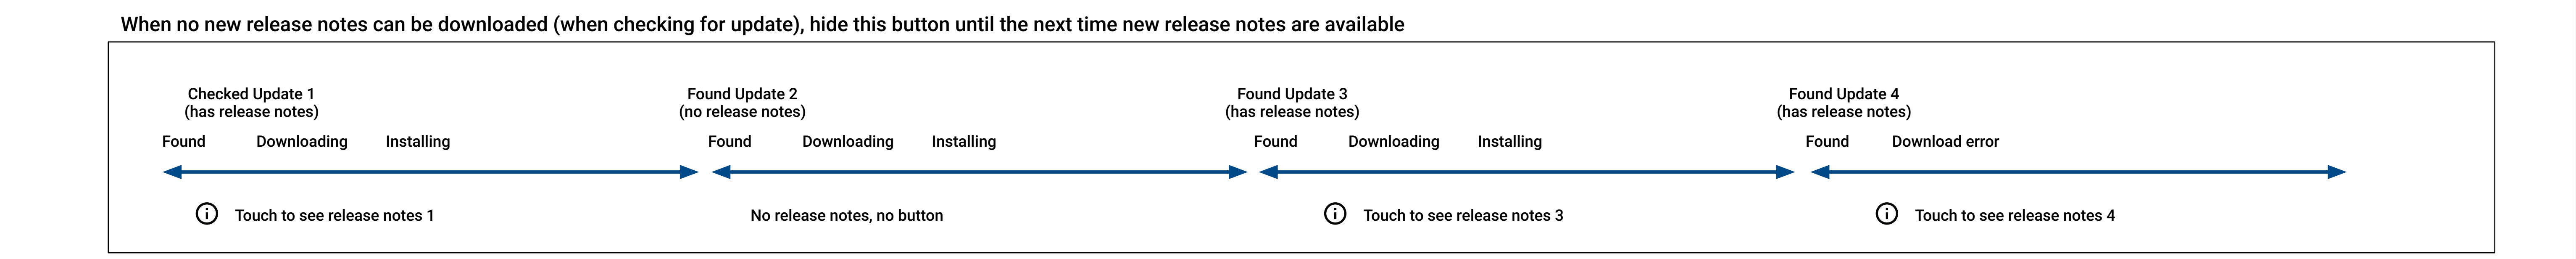

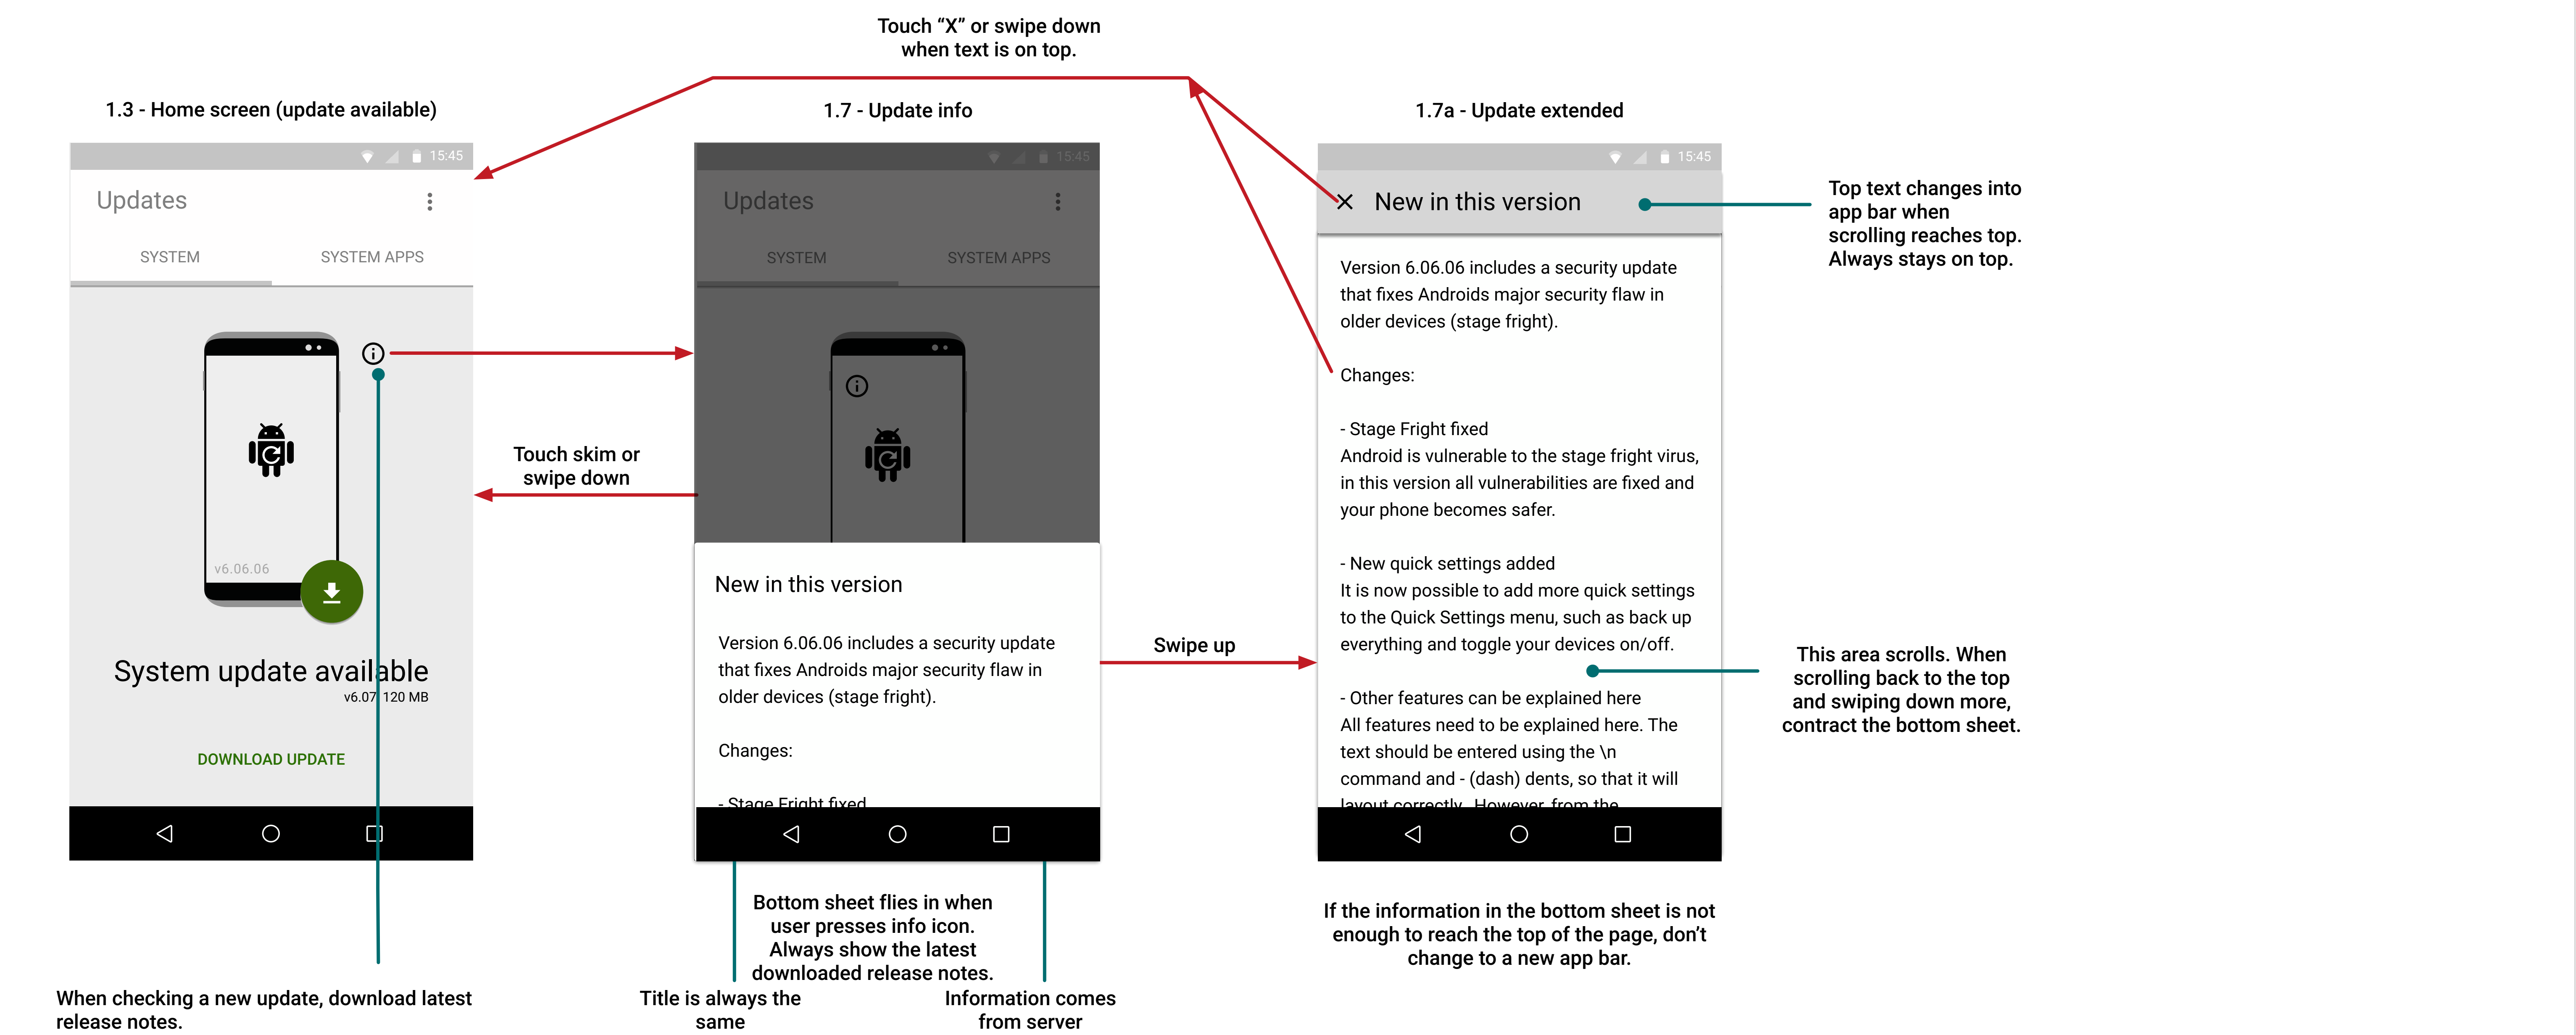

Using Mobile Upgrade will reset your device back to factory settings, so make sure you make a back up of your data!

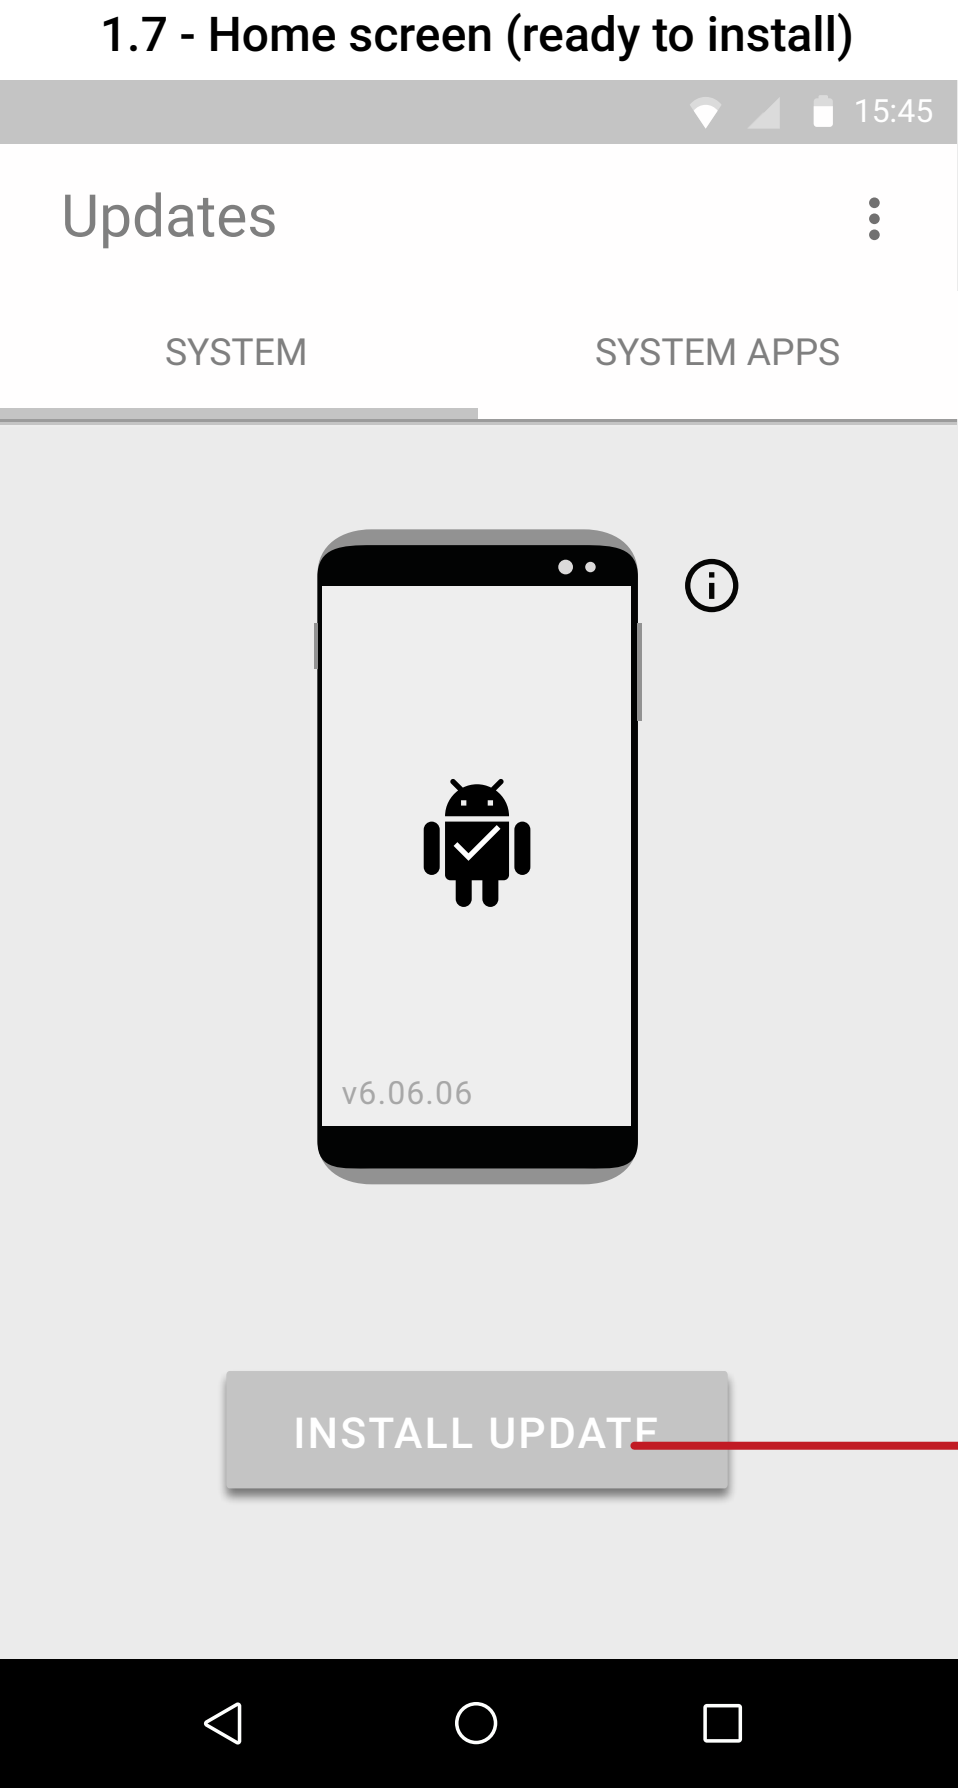

ALCATEL ONETOUCH
<http://www.alcatelonetouch.com>

Removes dialog, don't allow update.

Show install progress

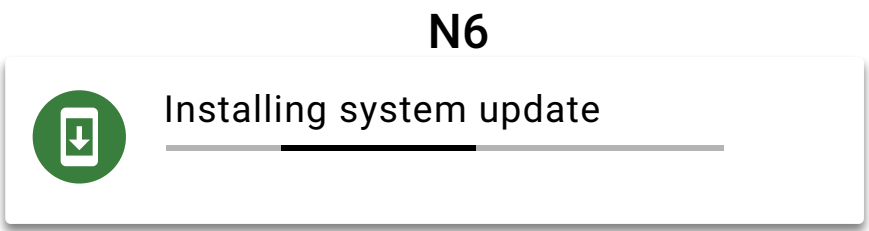

If battery < 30%, show this screen instead of 1.7 and don't allow update.

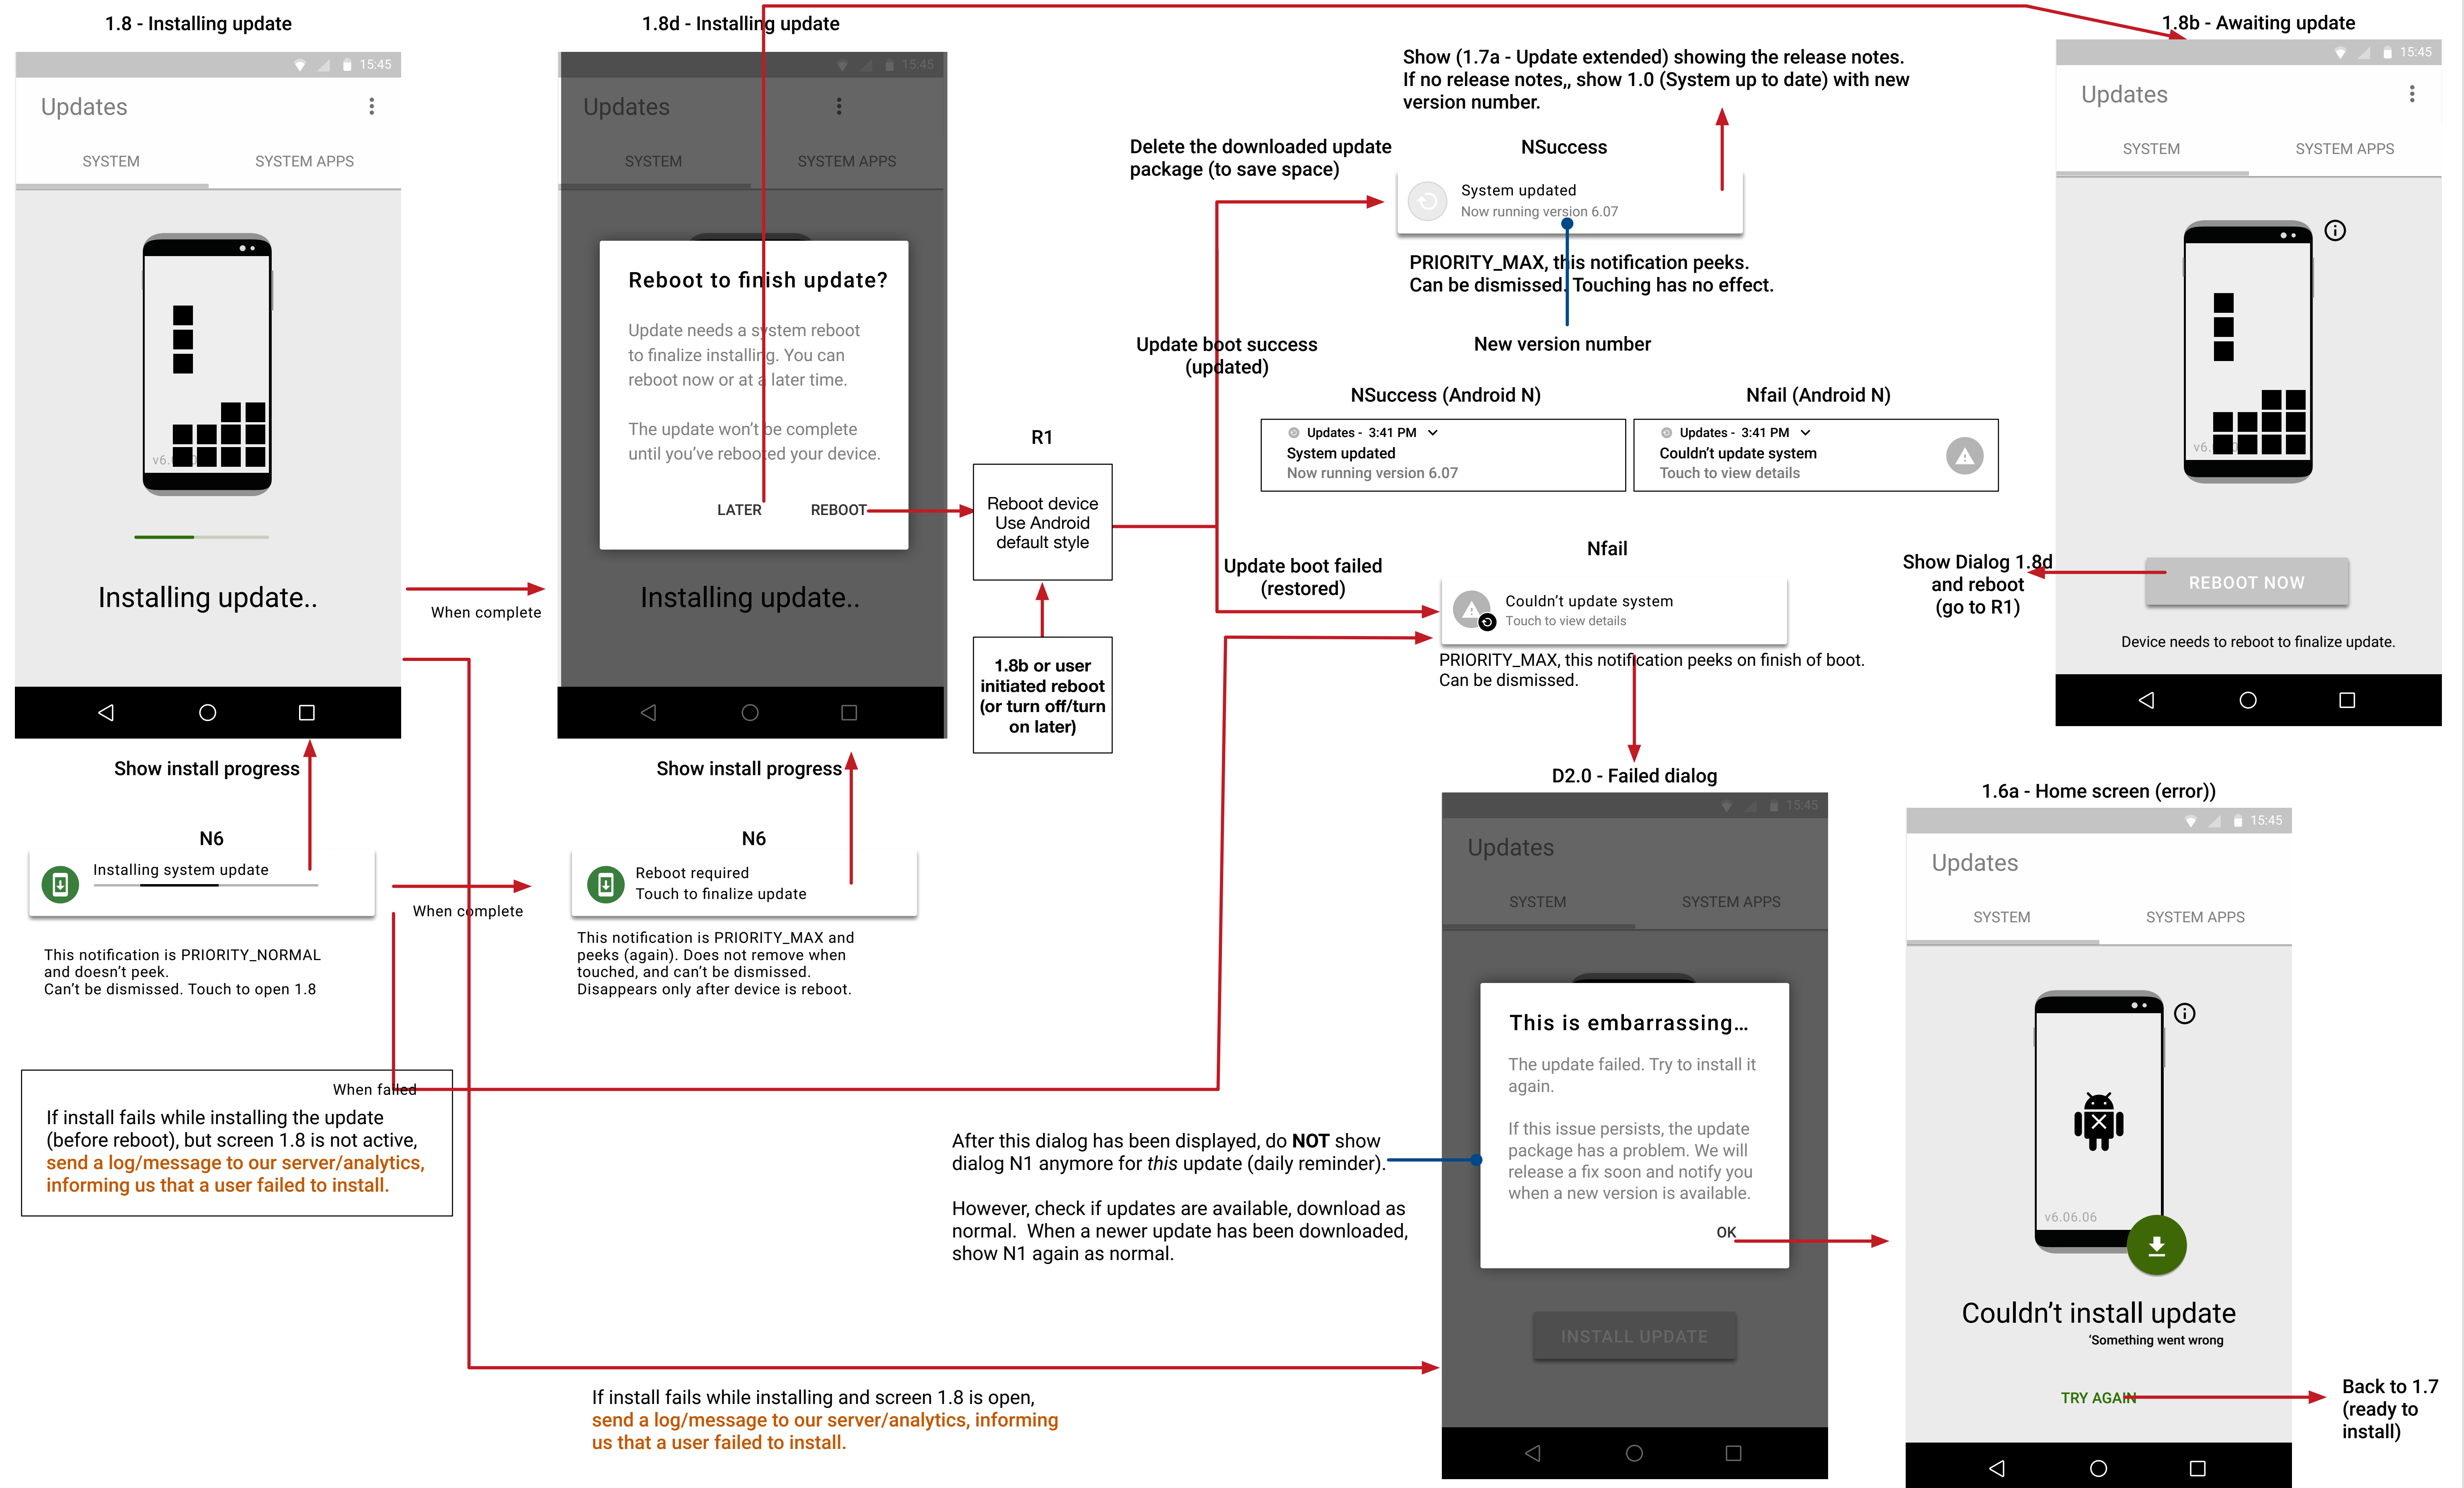

Show battery percentage

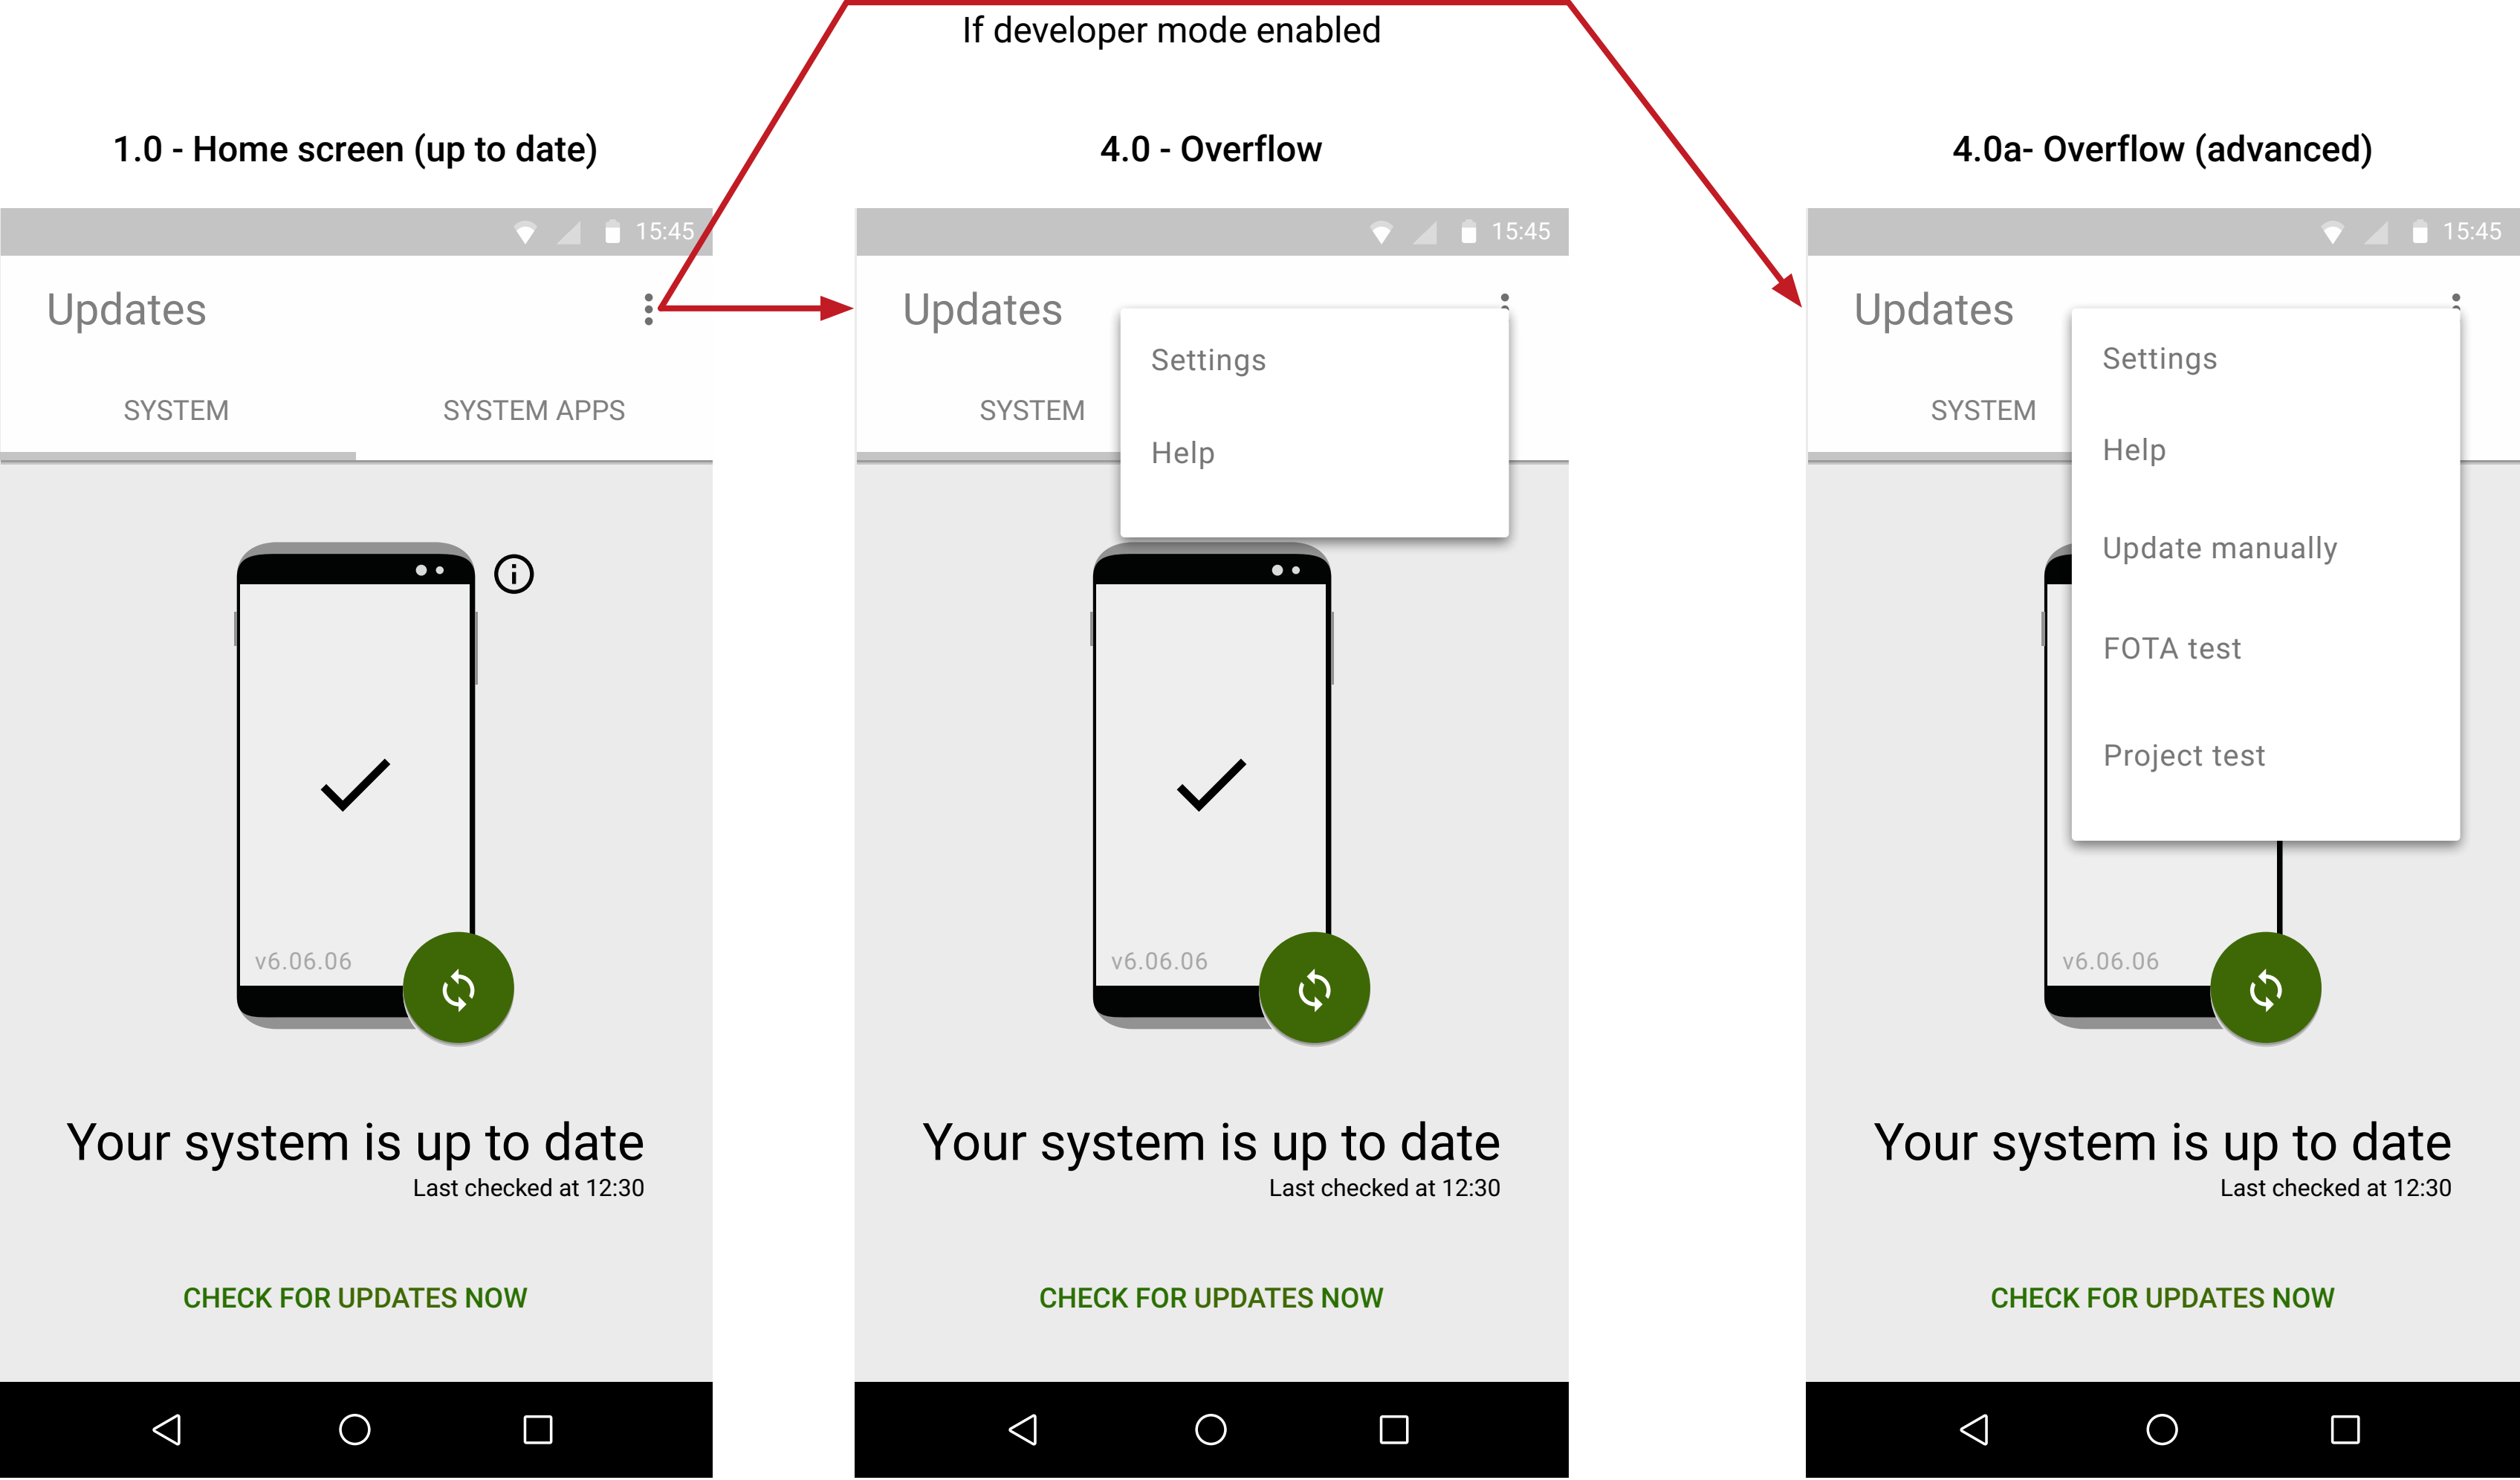

Grey out button

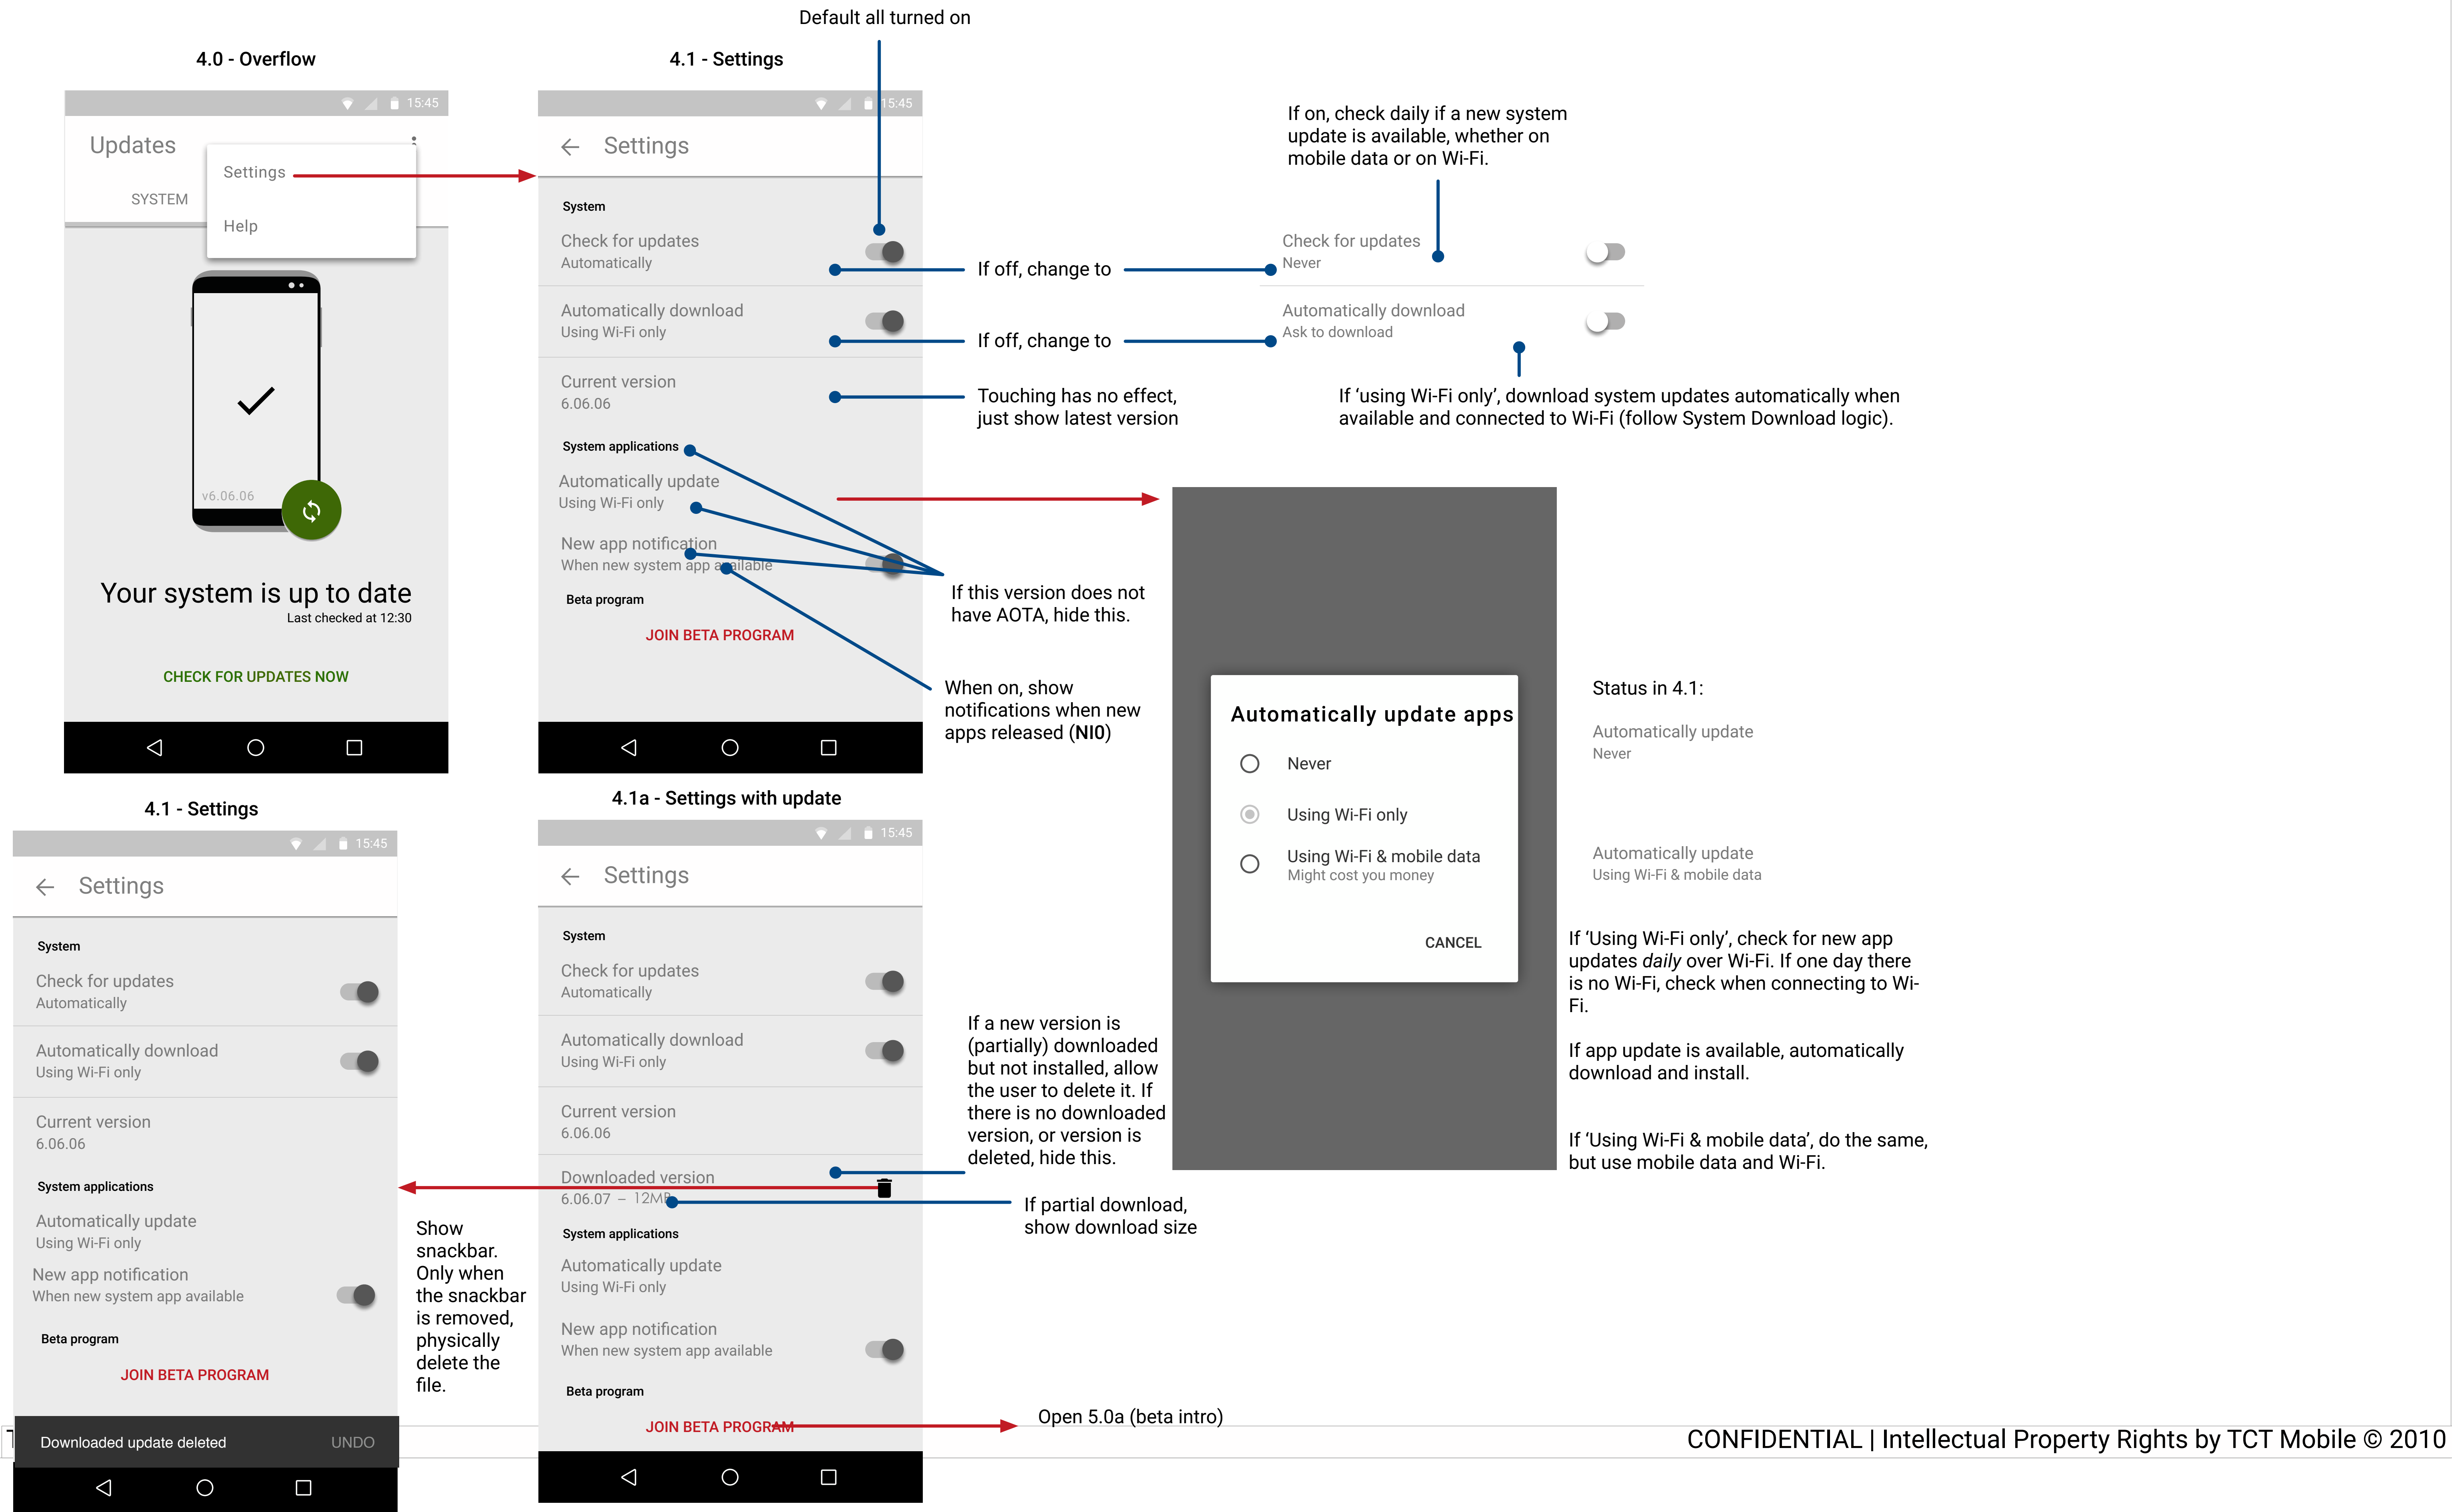

Add hint text

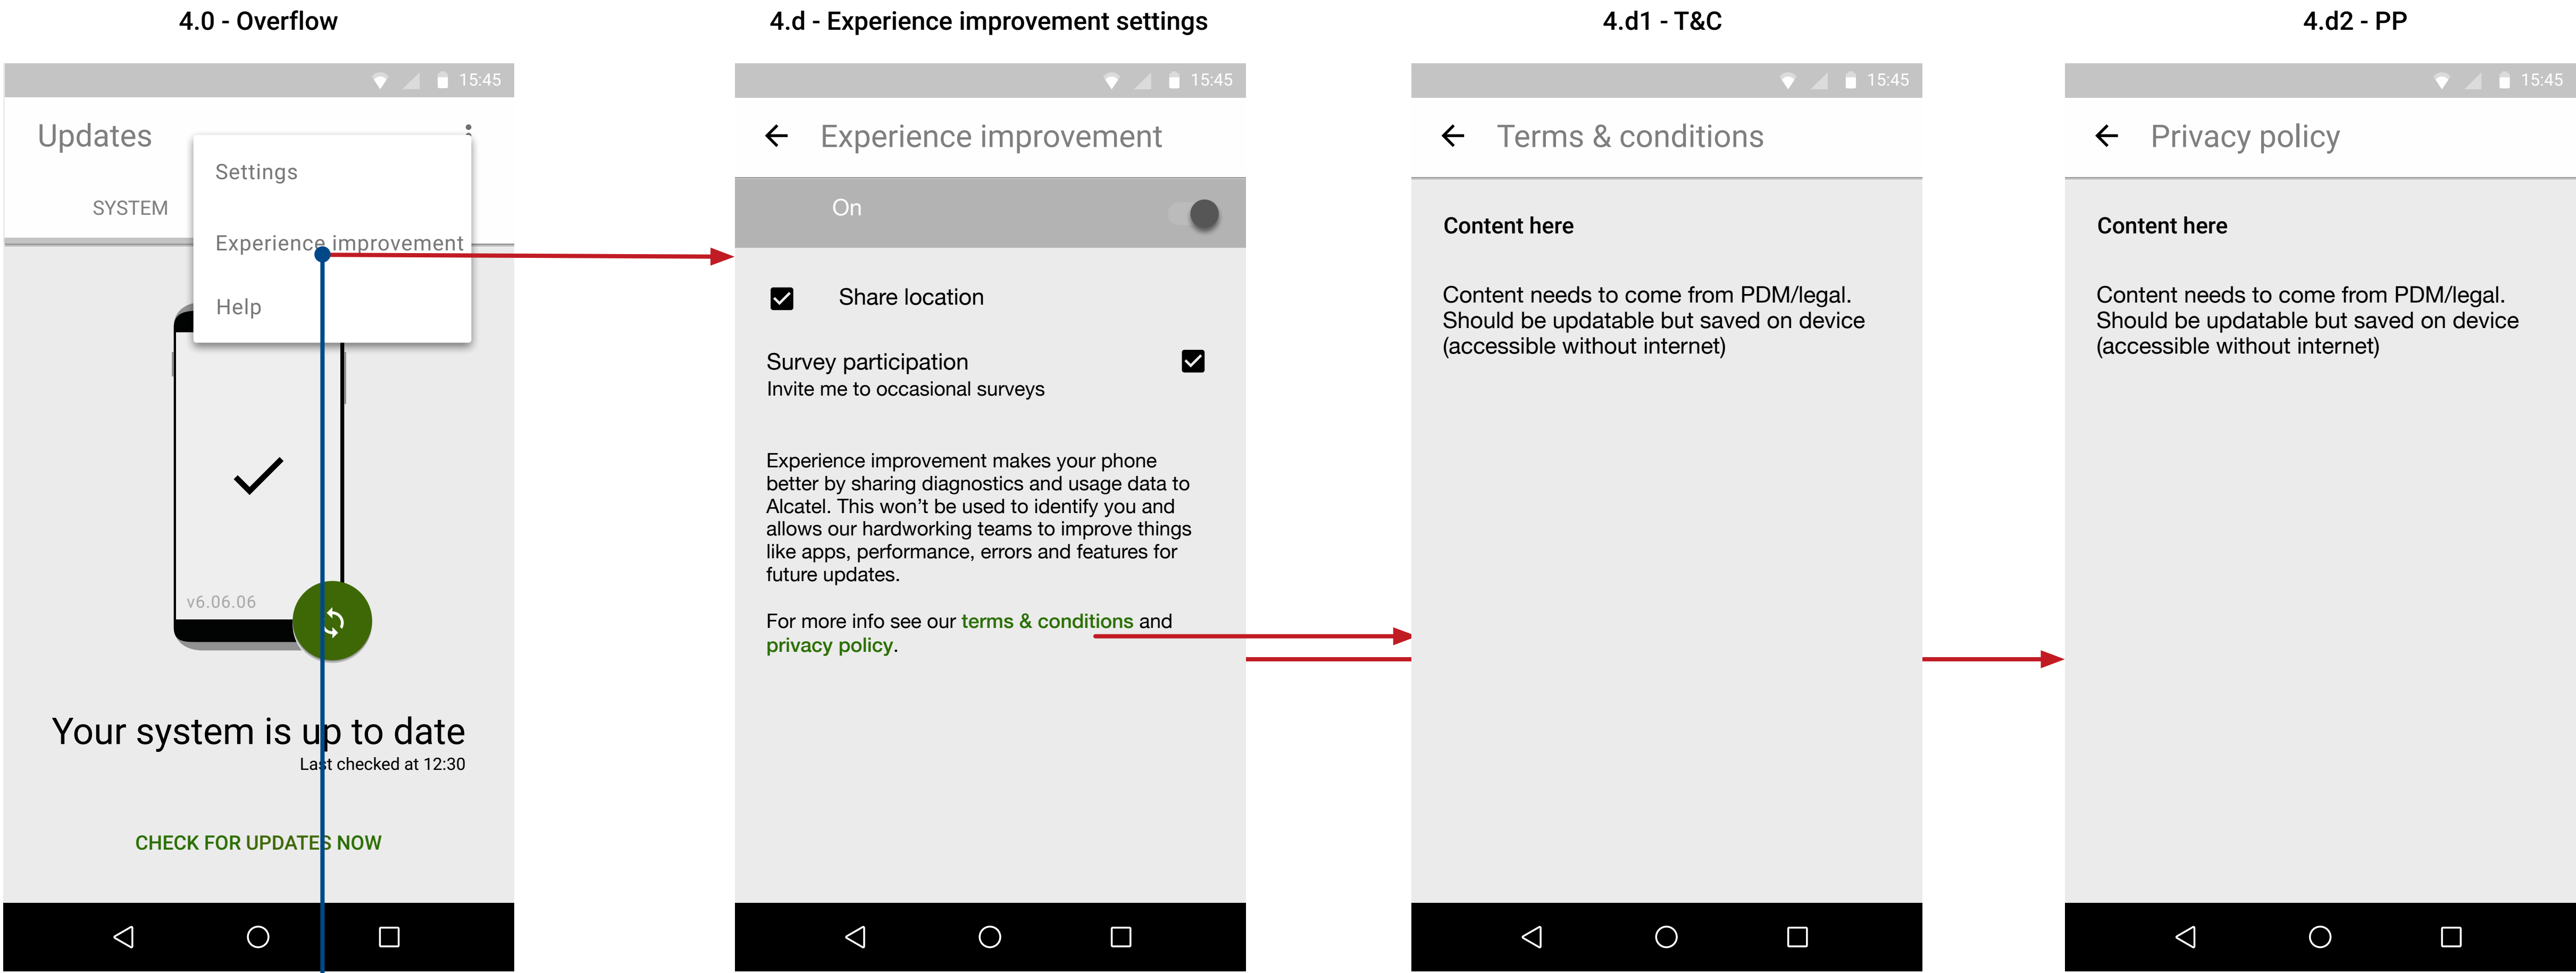

This notification is PRIORITY_MAX and peeks. Can't be dismissed.

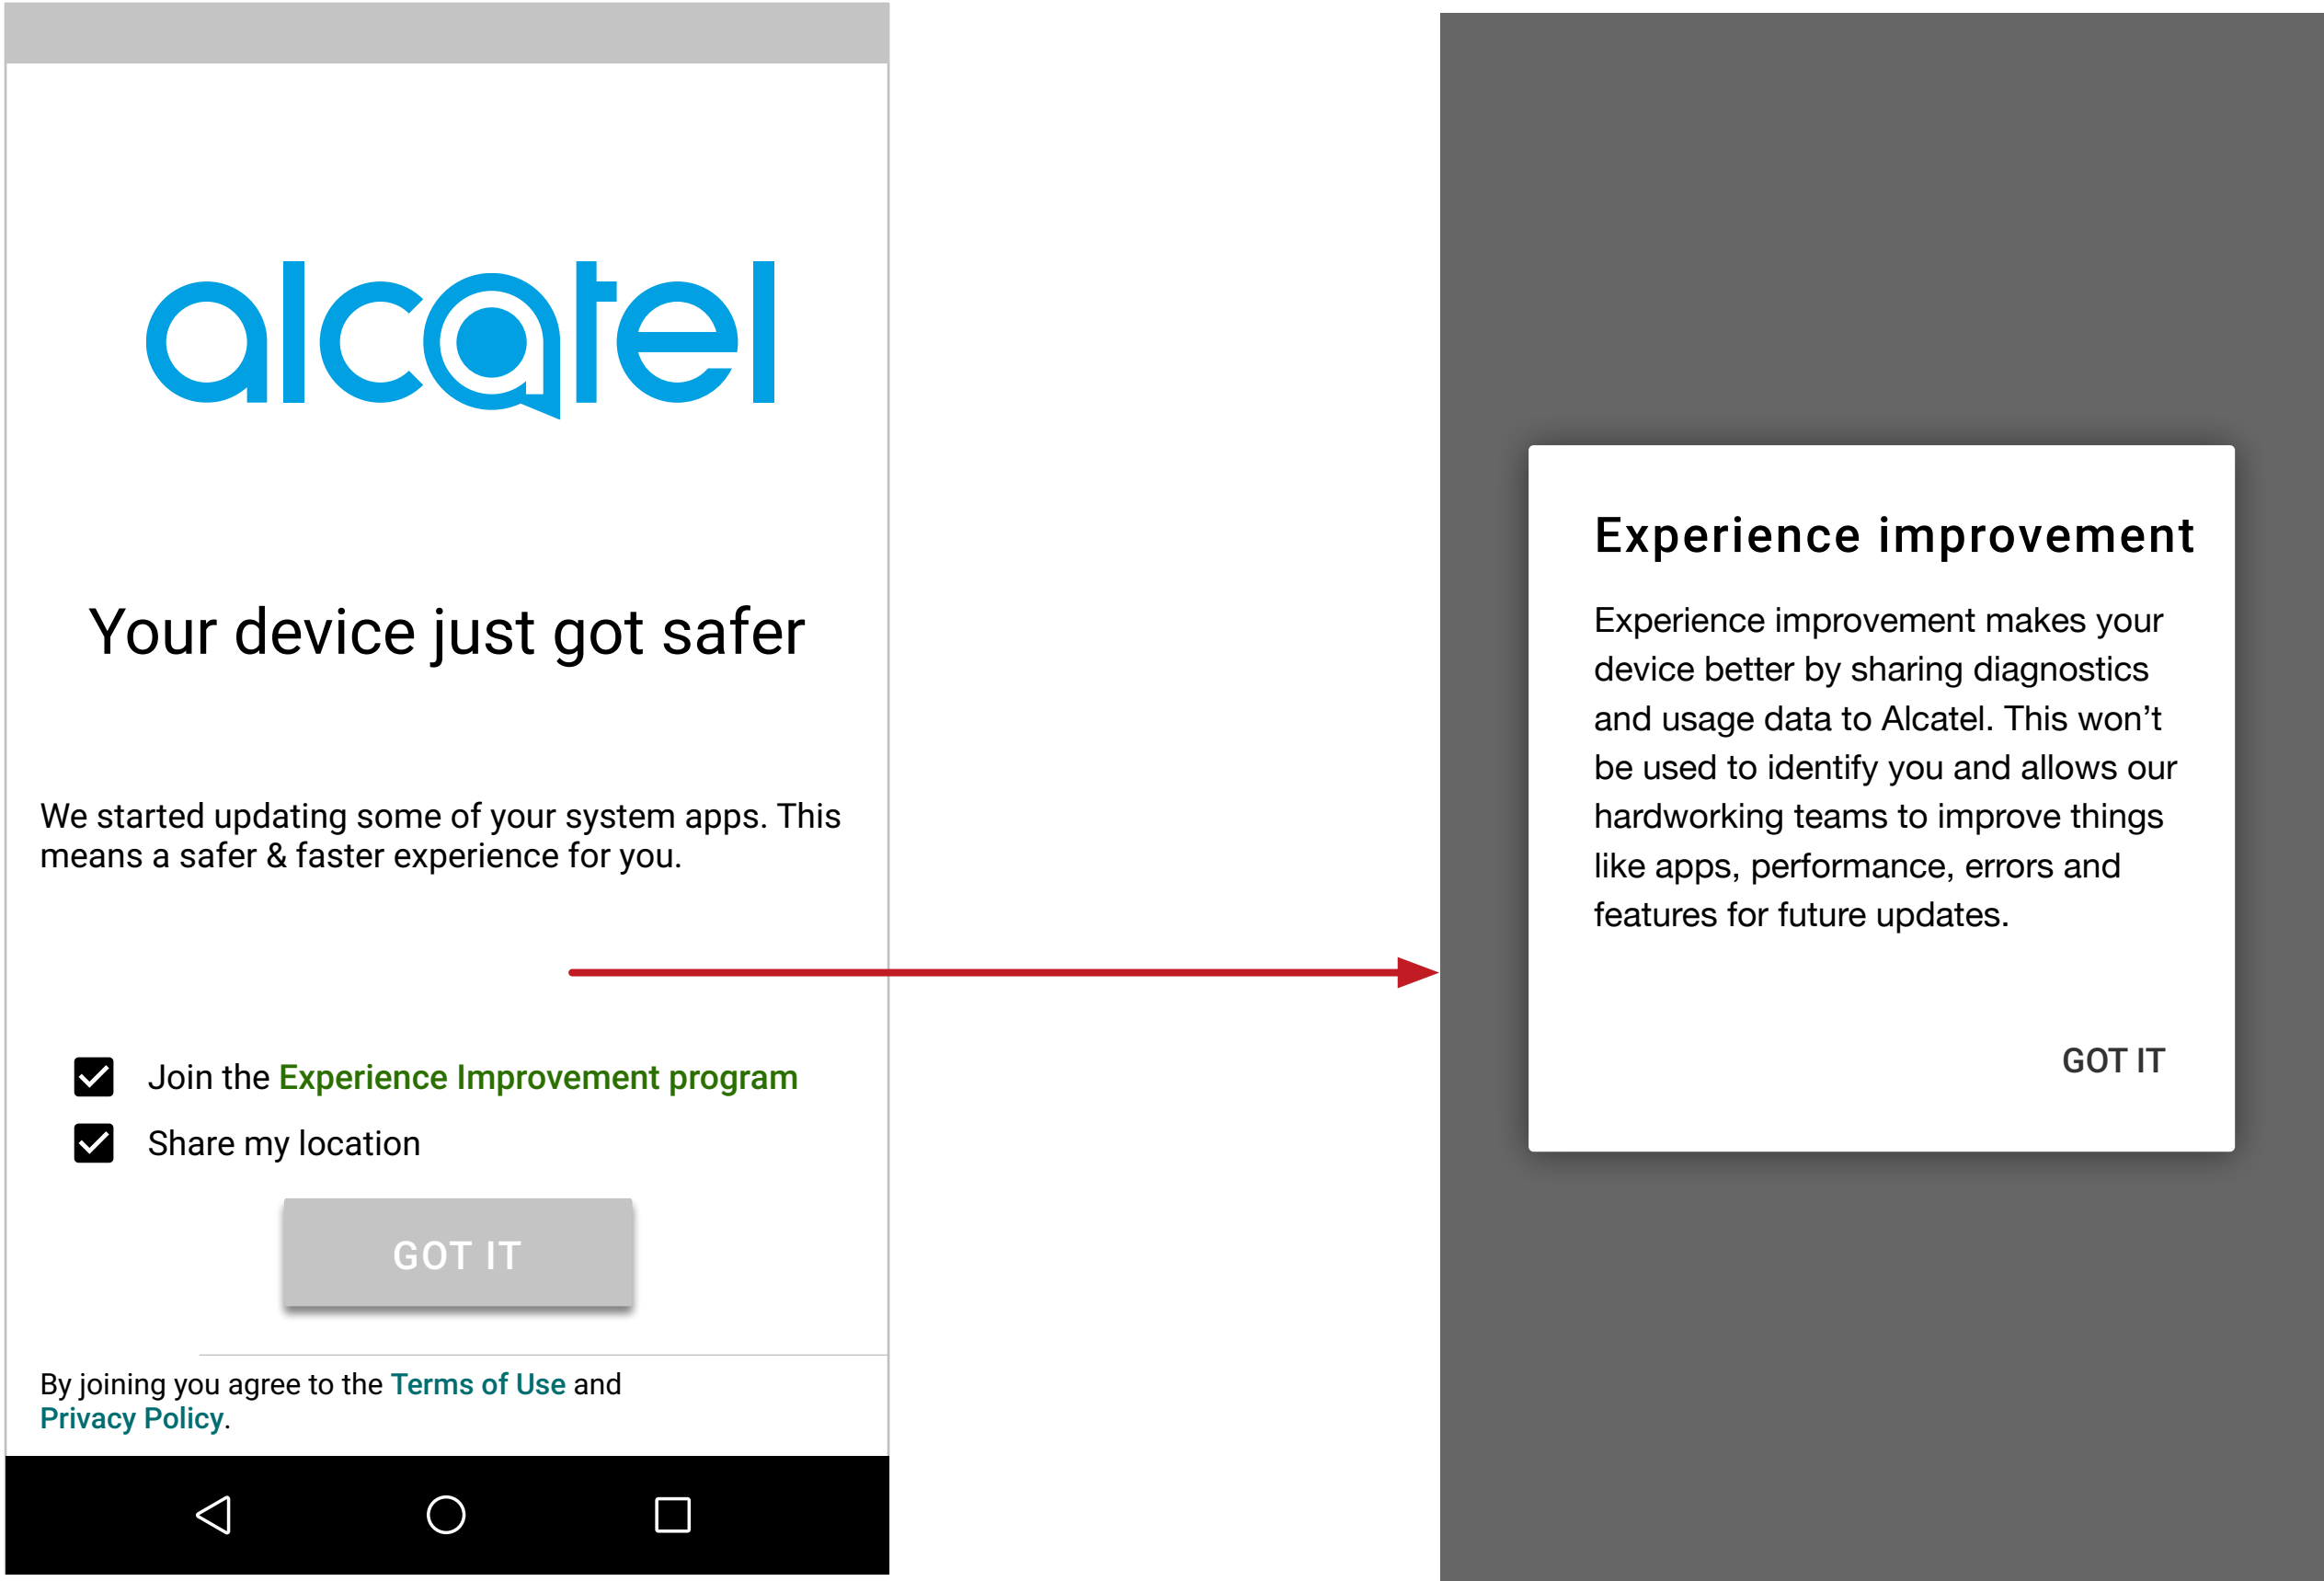

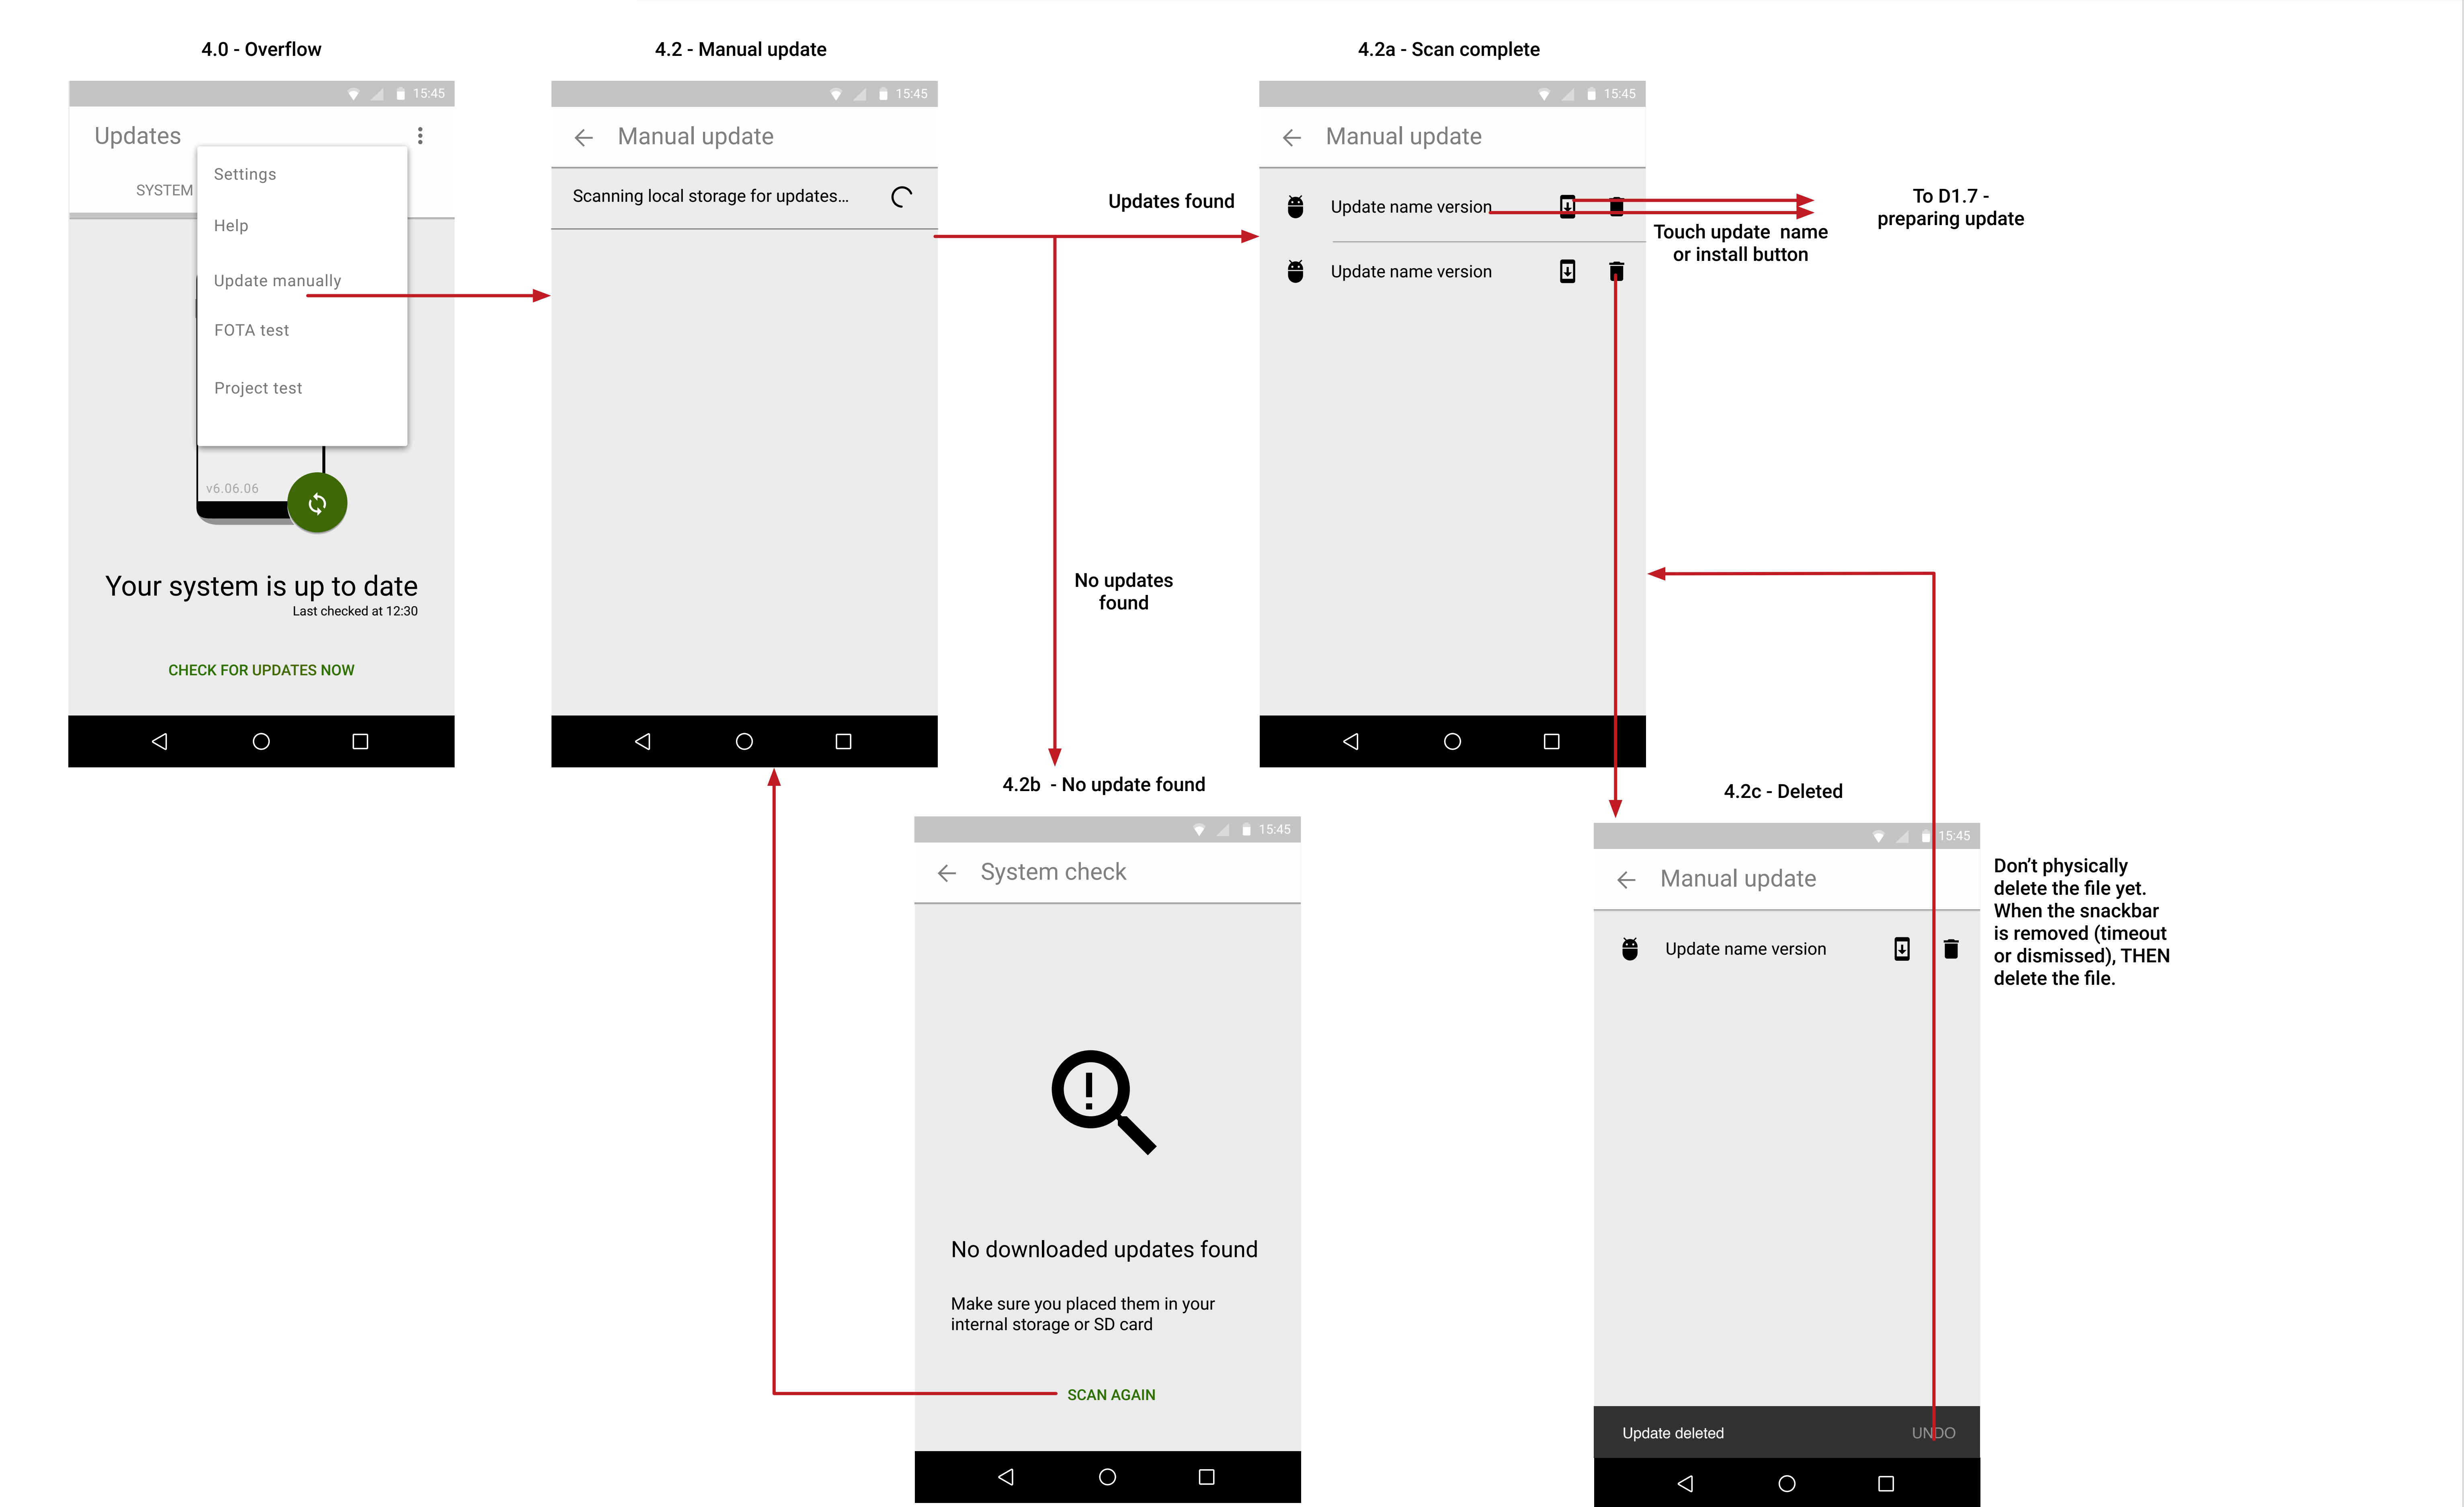

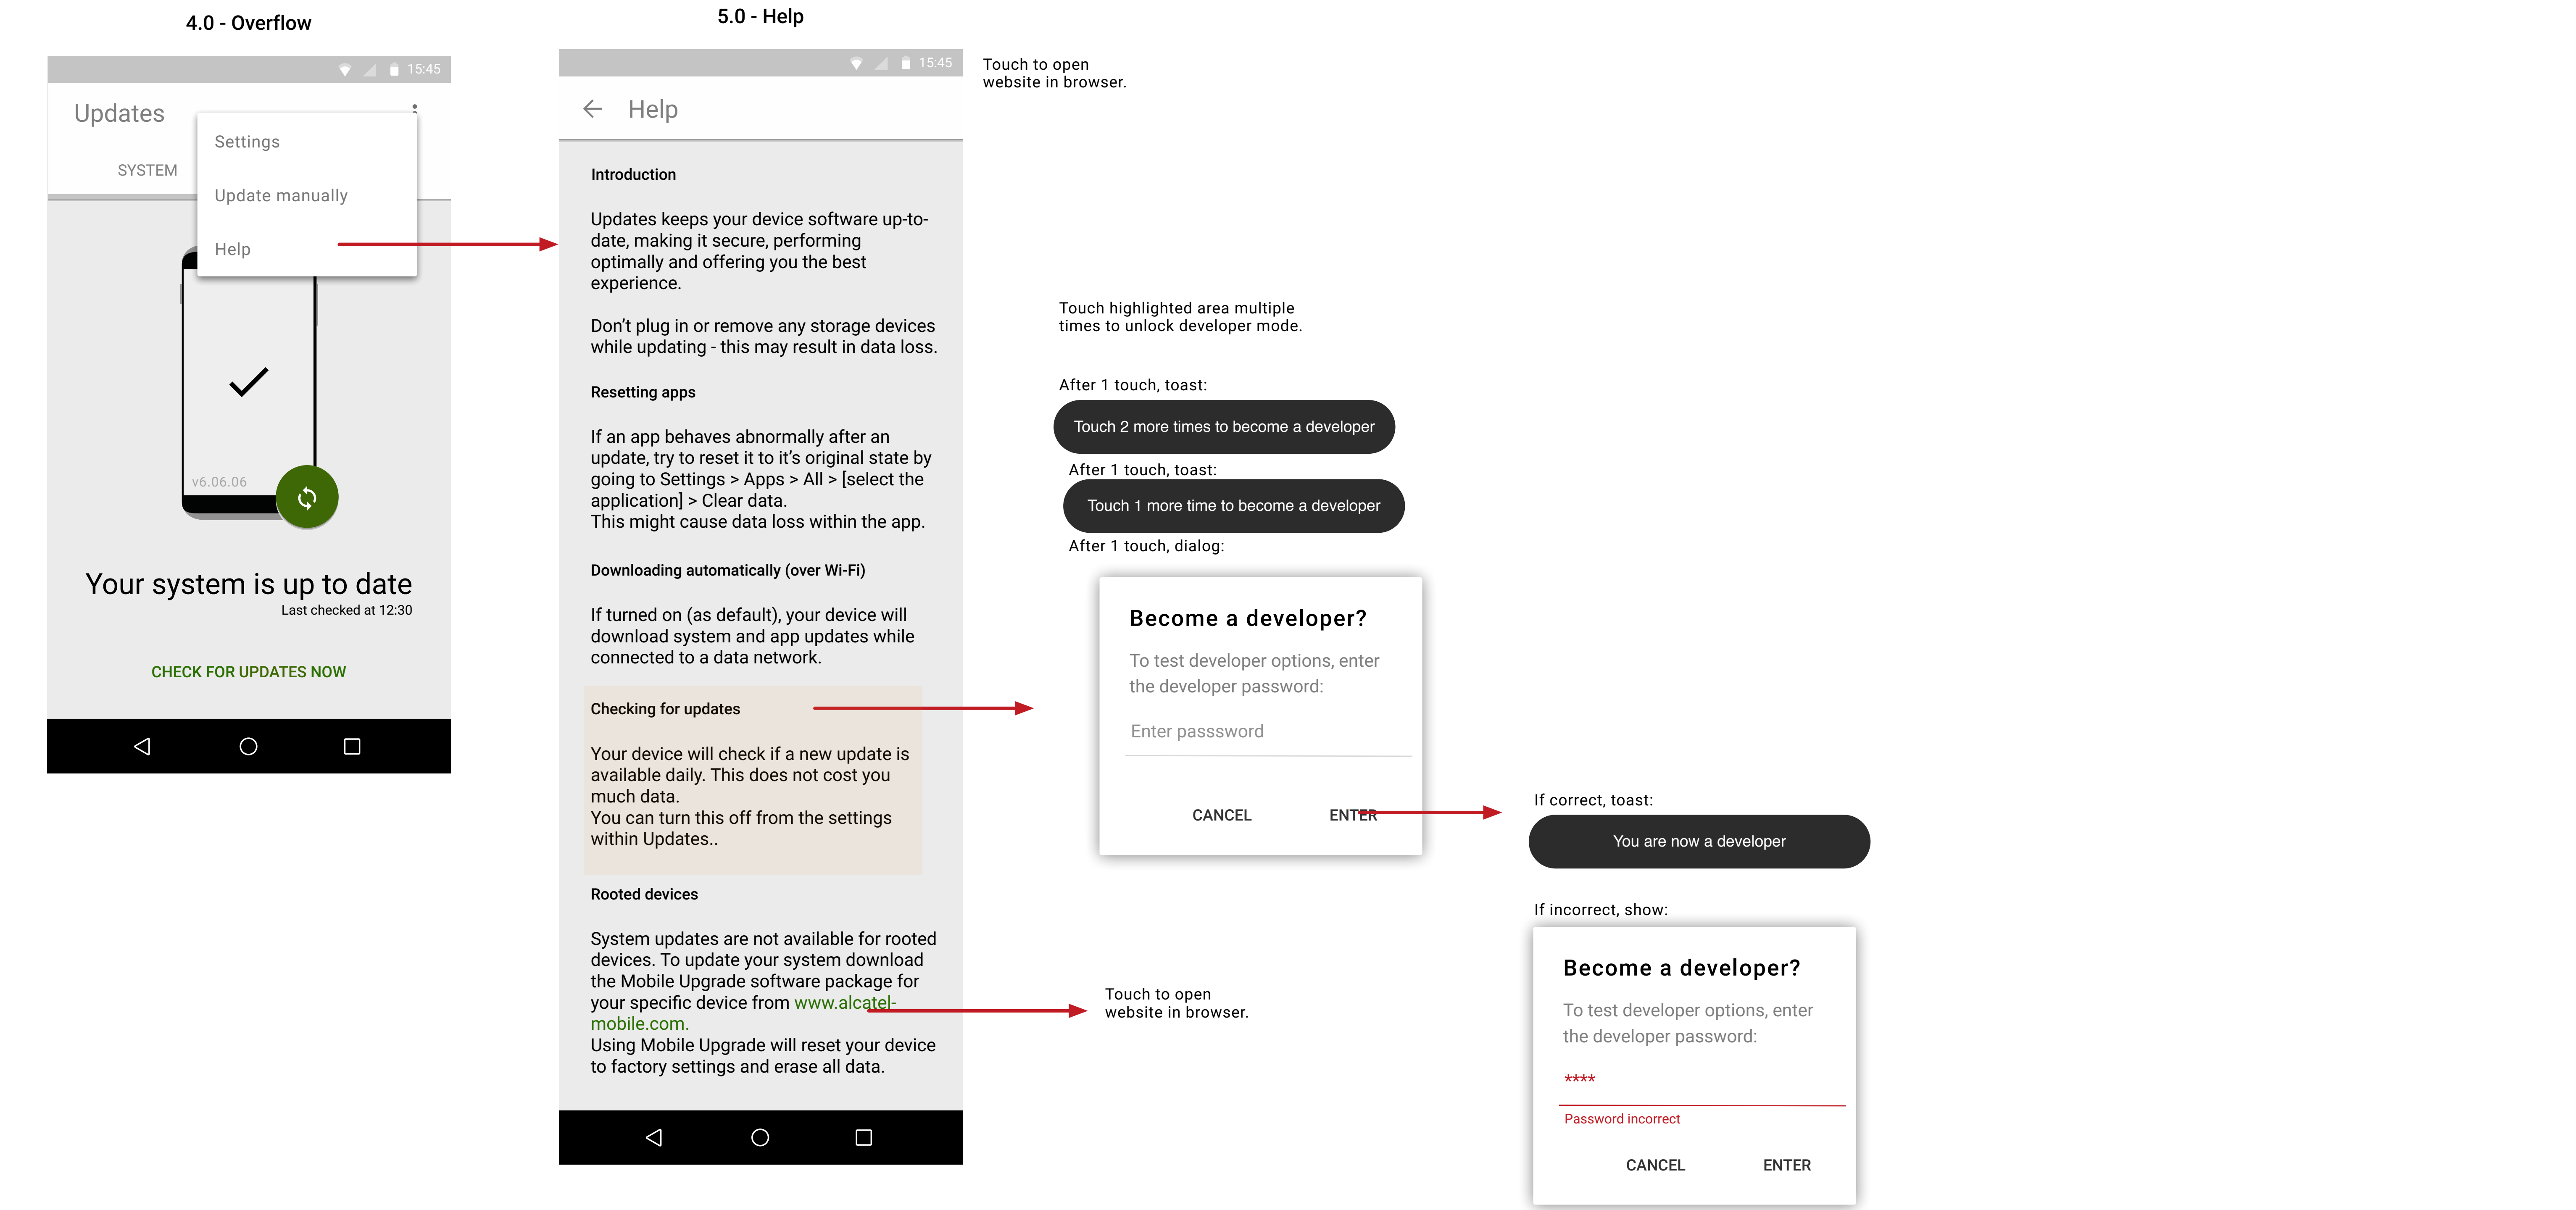

If this device is pre-M device (no diagnostics available), AOTA needs to serve as diagnostics base.

In that case, add an entry "Experience improvement" to the overflow menu. This is a flag that all apps can check to see if diagnostics is on or not.

When the device does not have diagnostics installed, the first time a diagnostic-enabled app is opened, show this screen (AOTA). This will set the flag on D

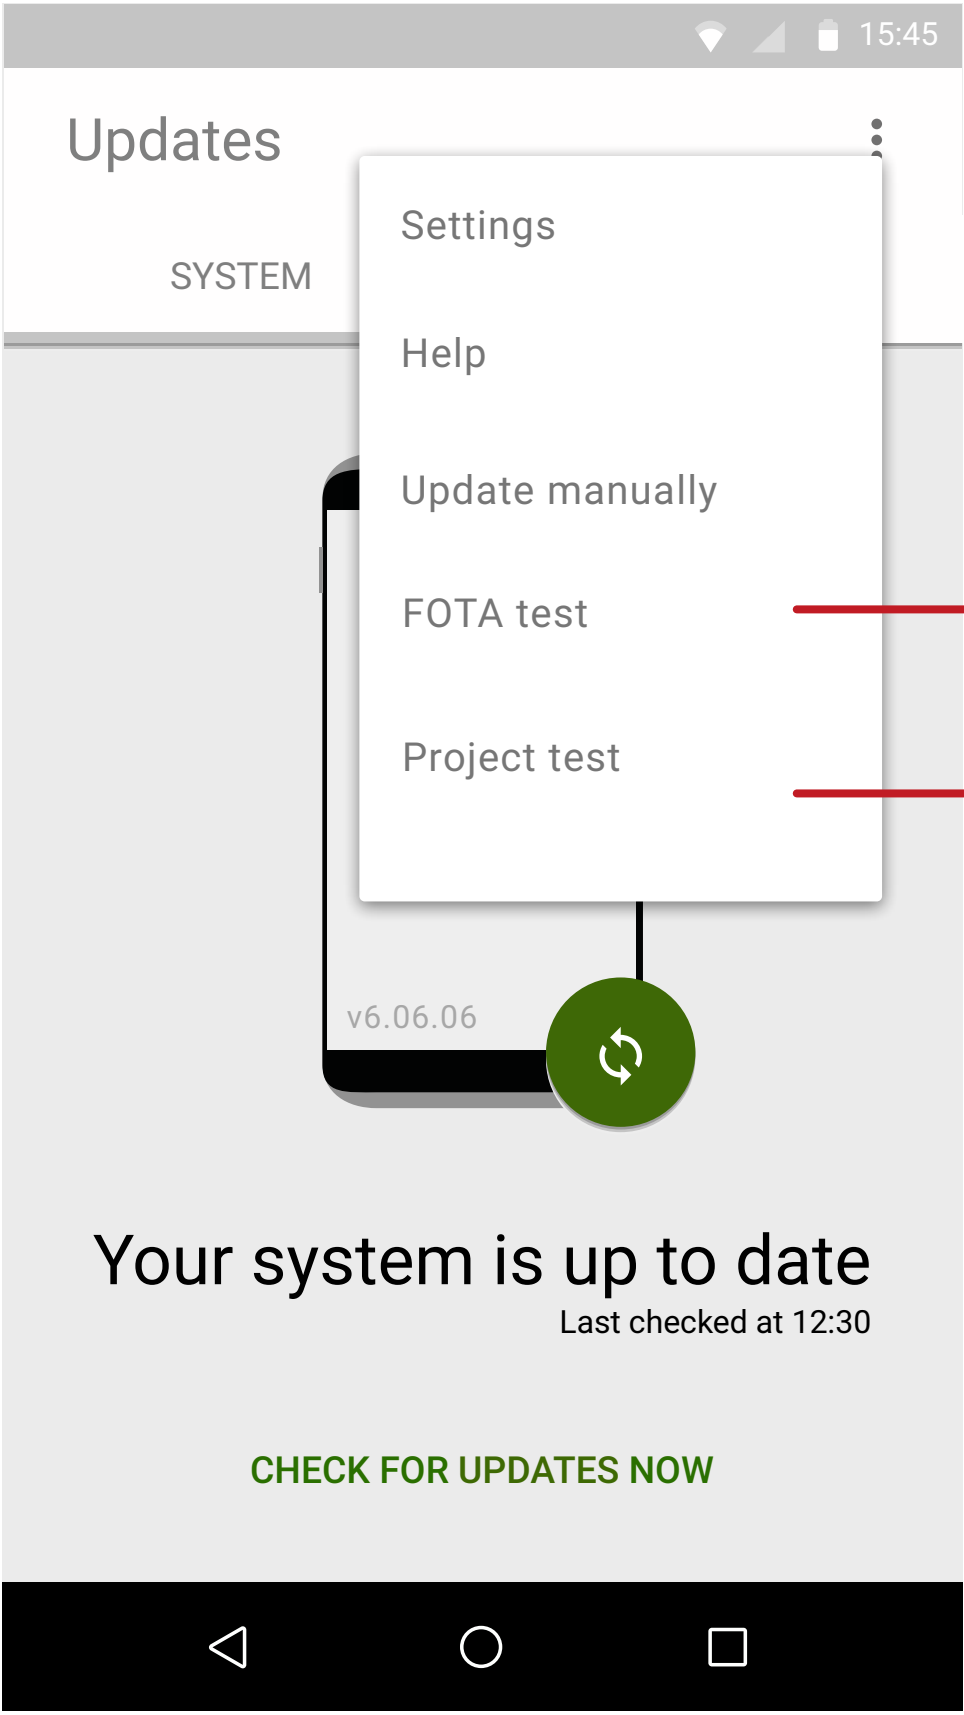

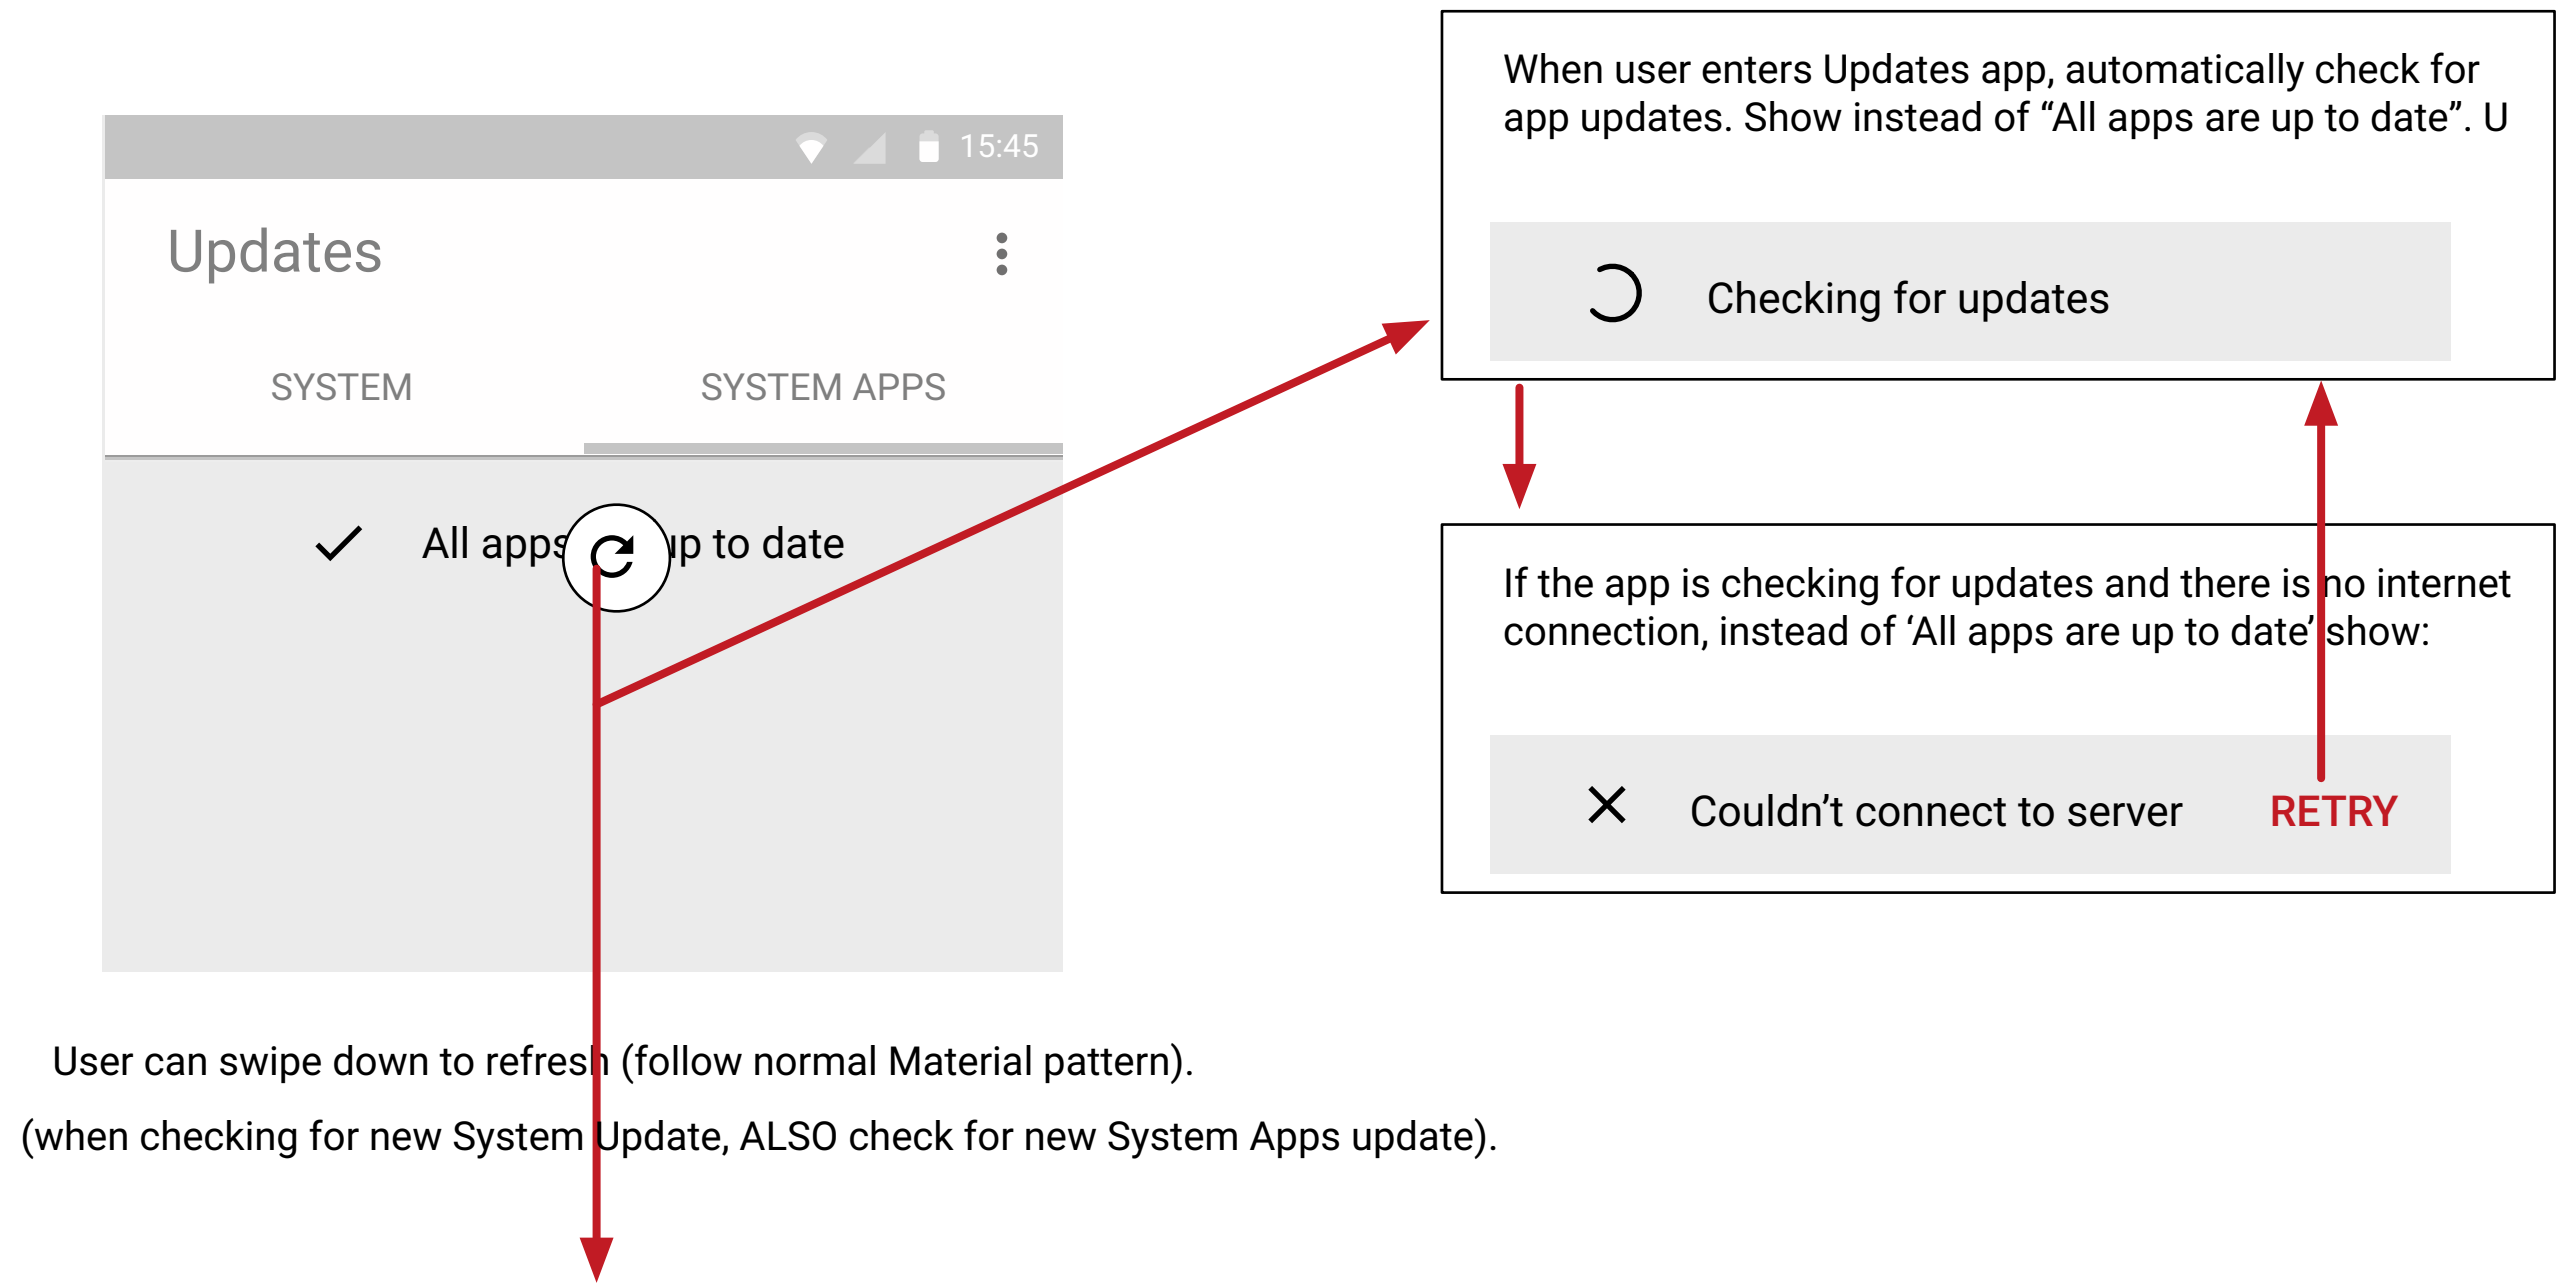

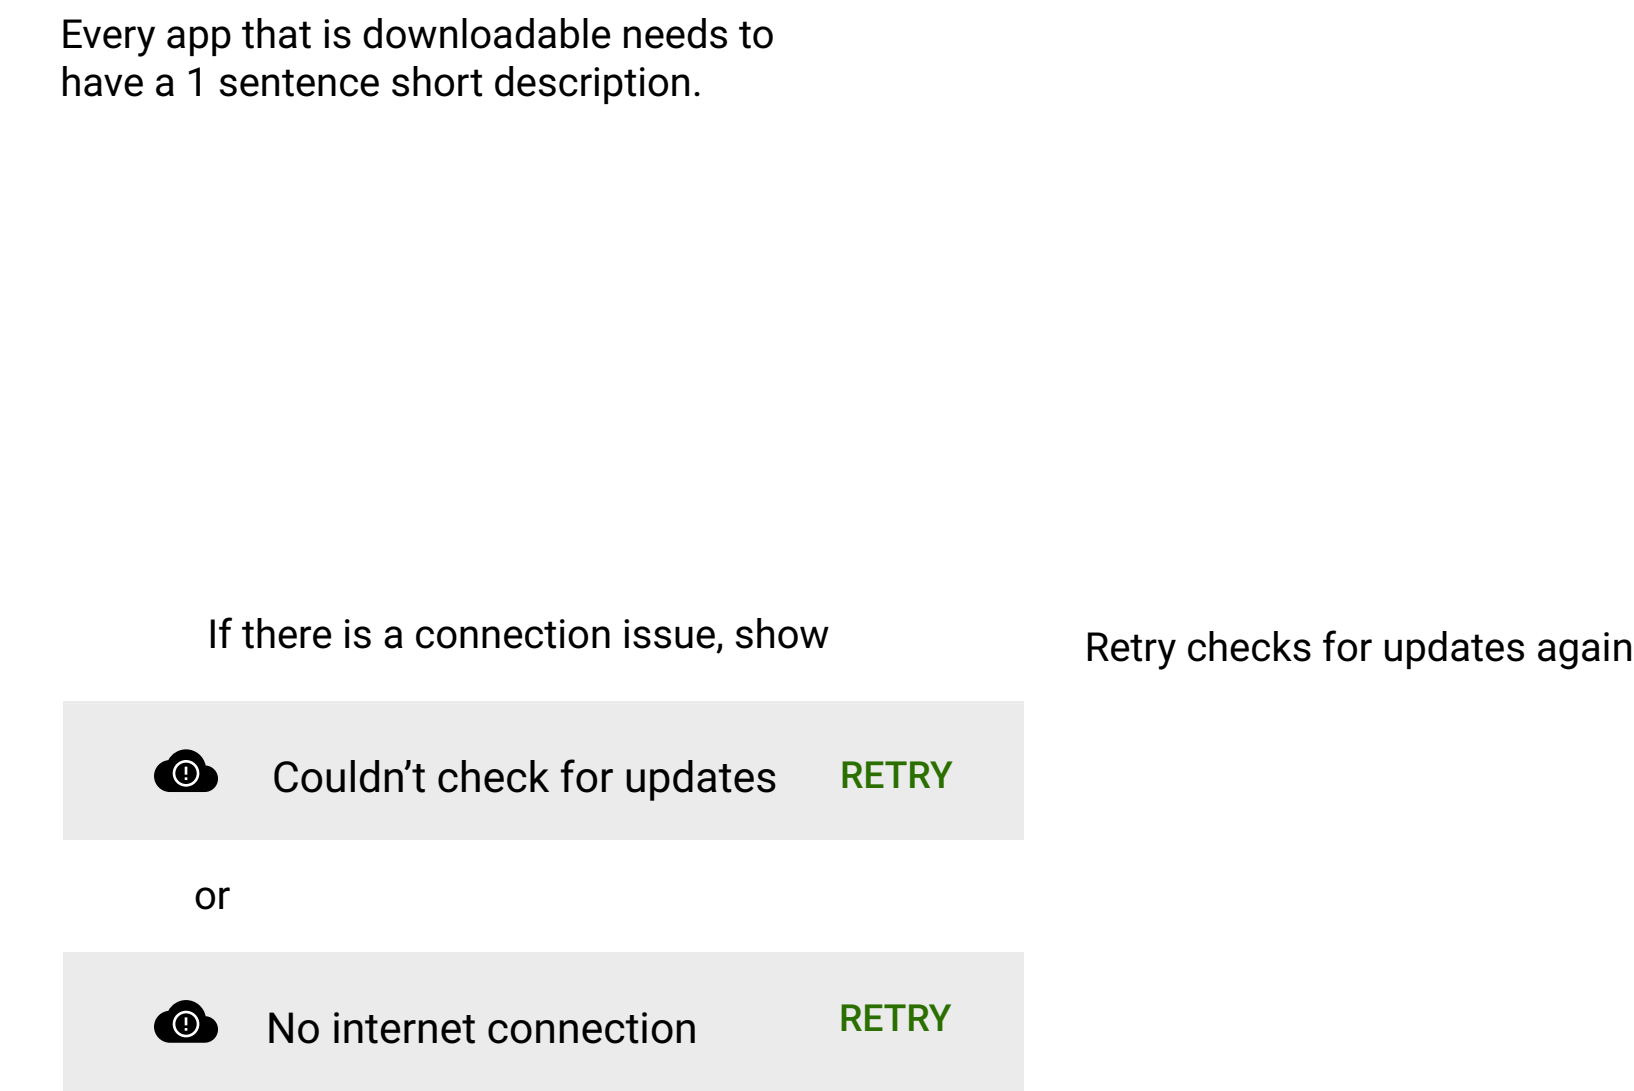

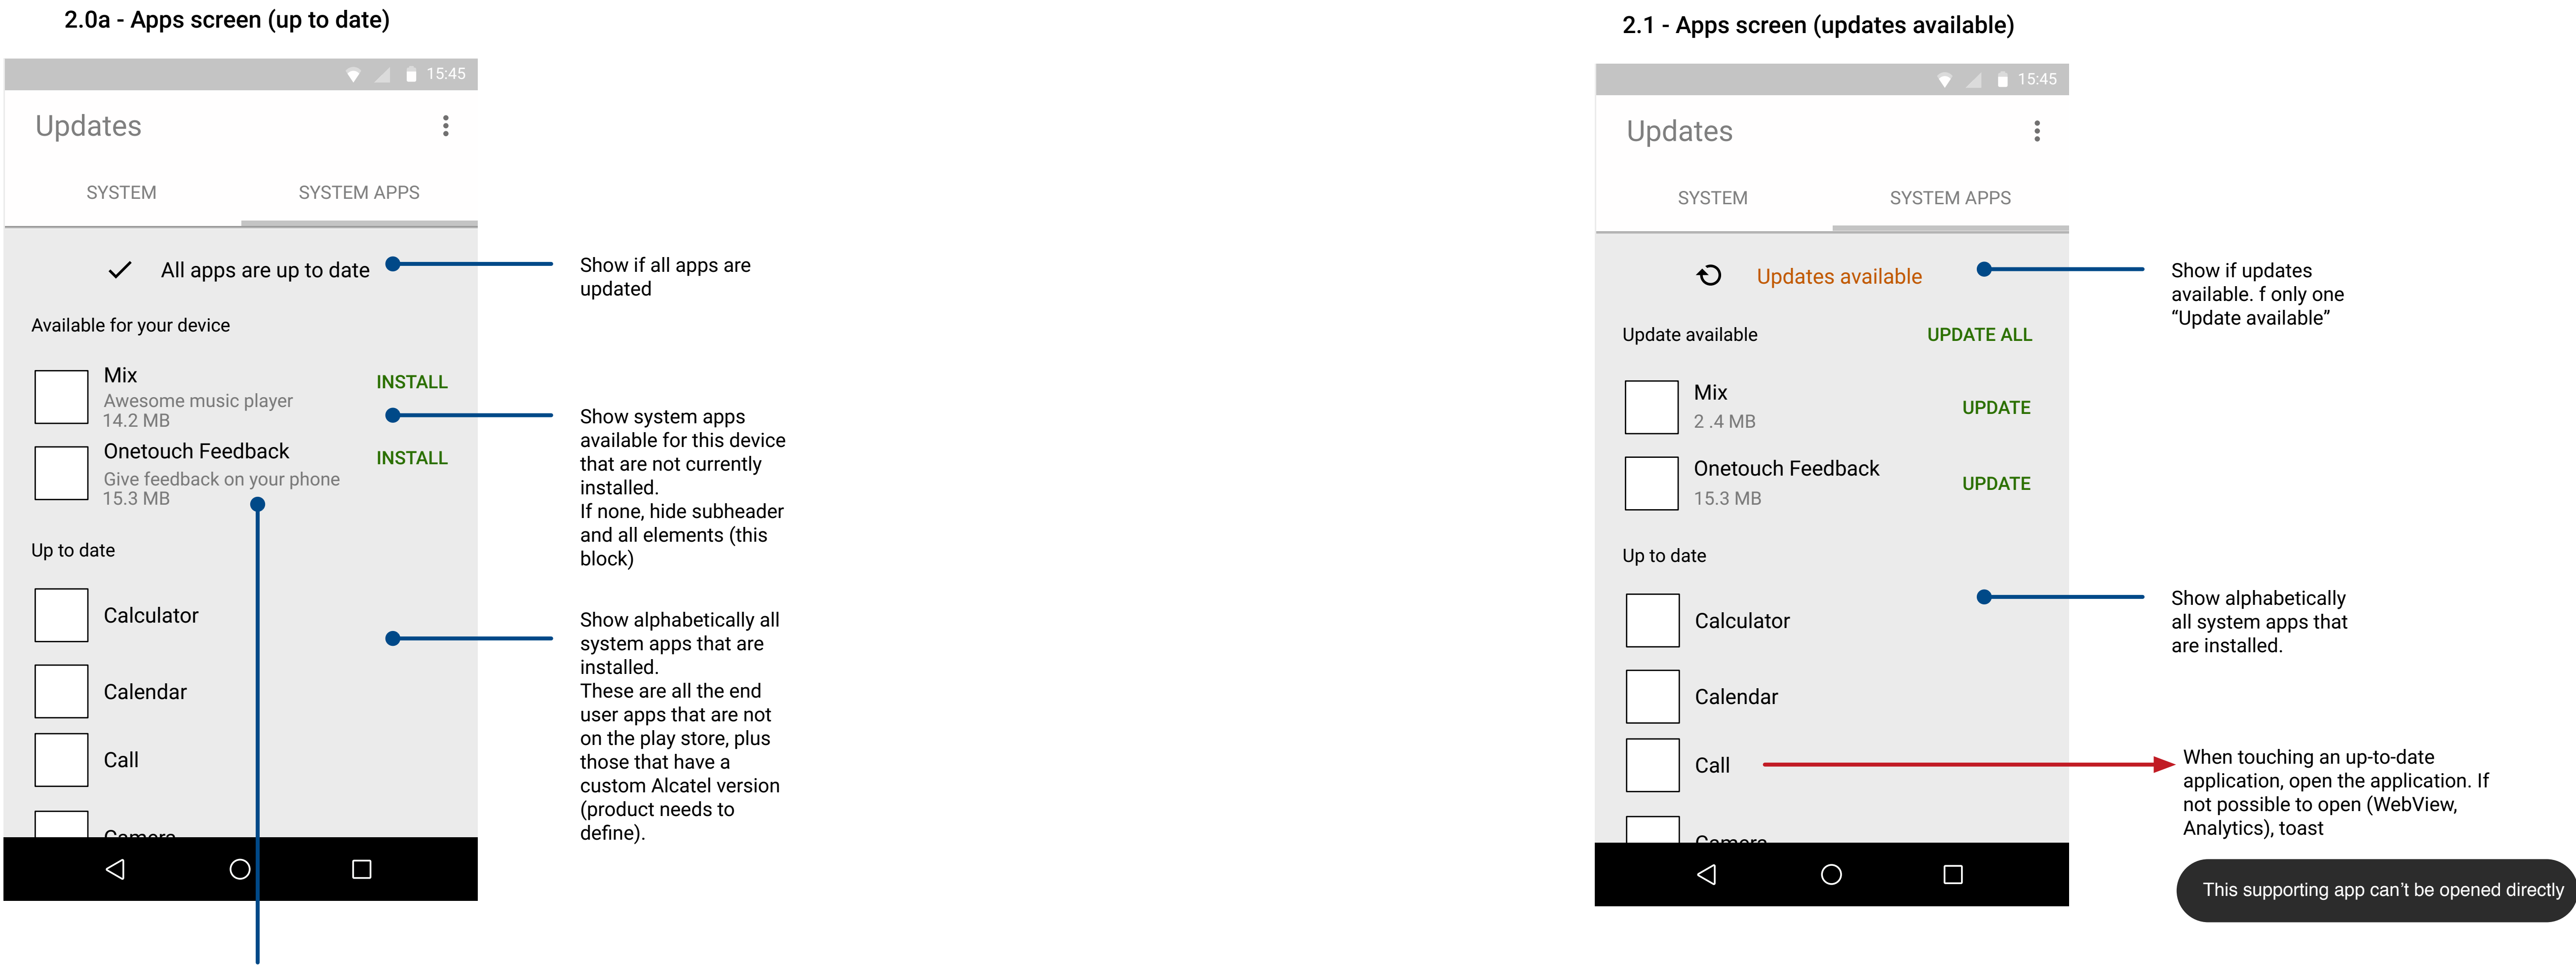

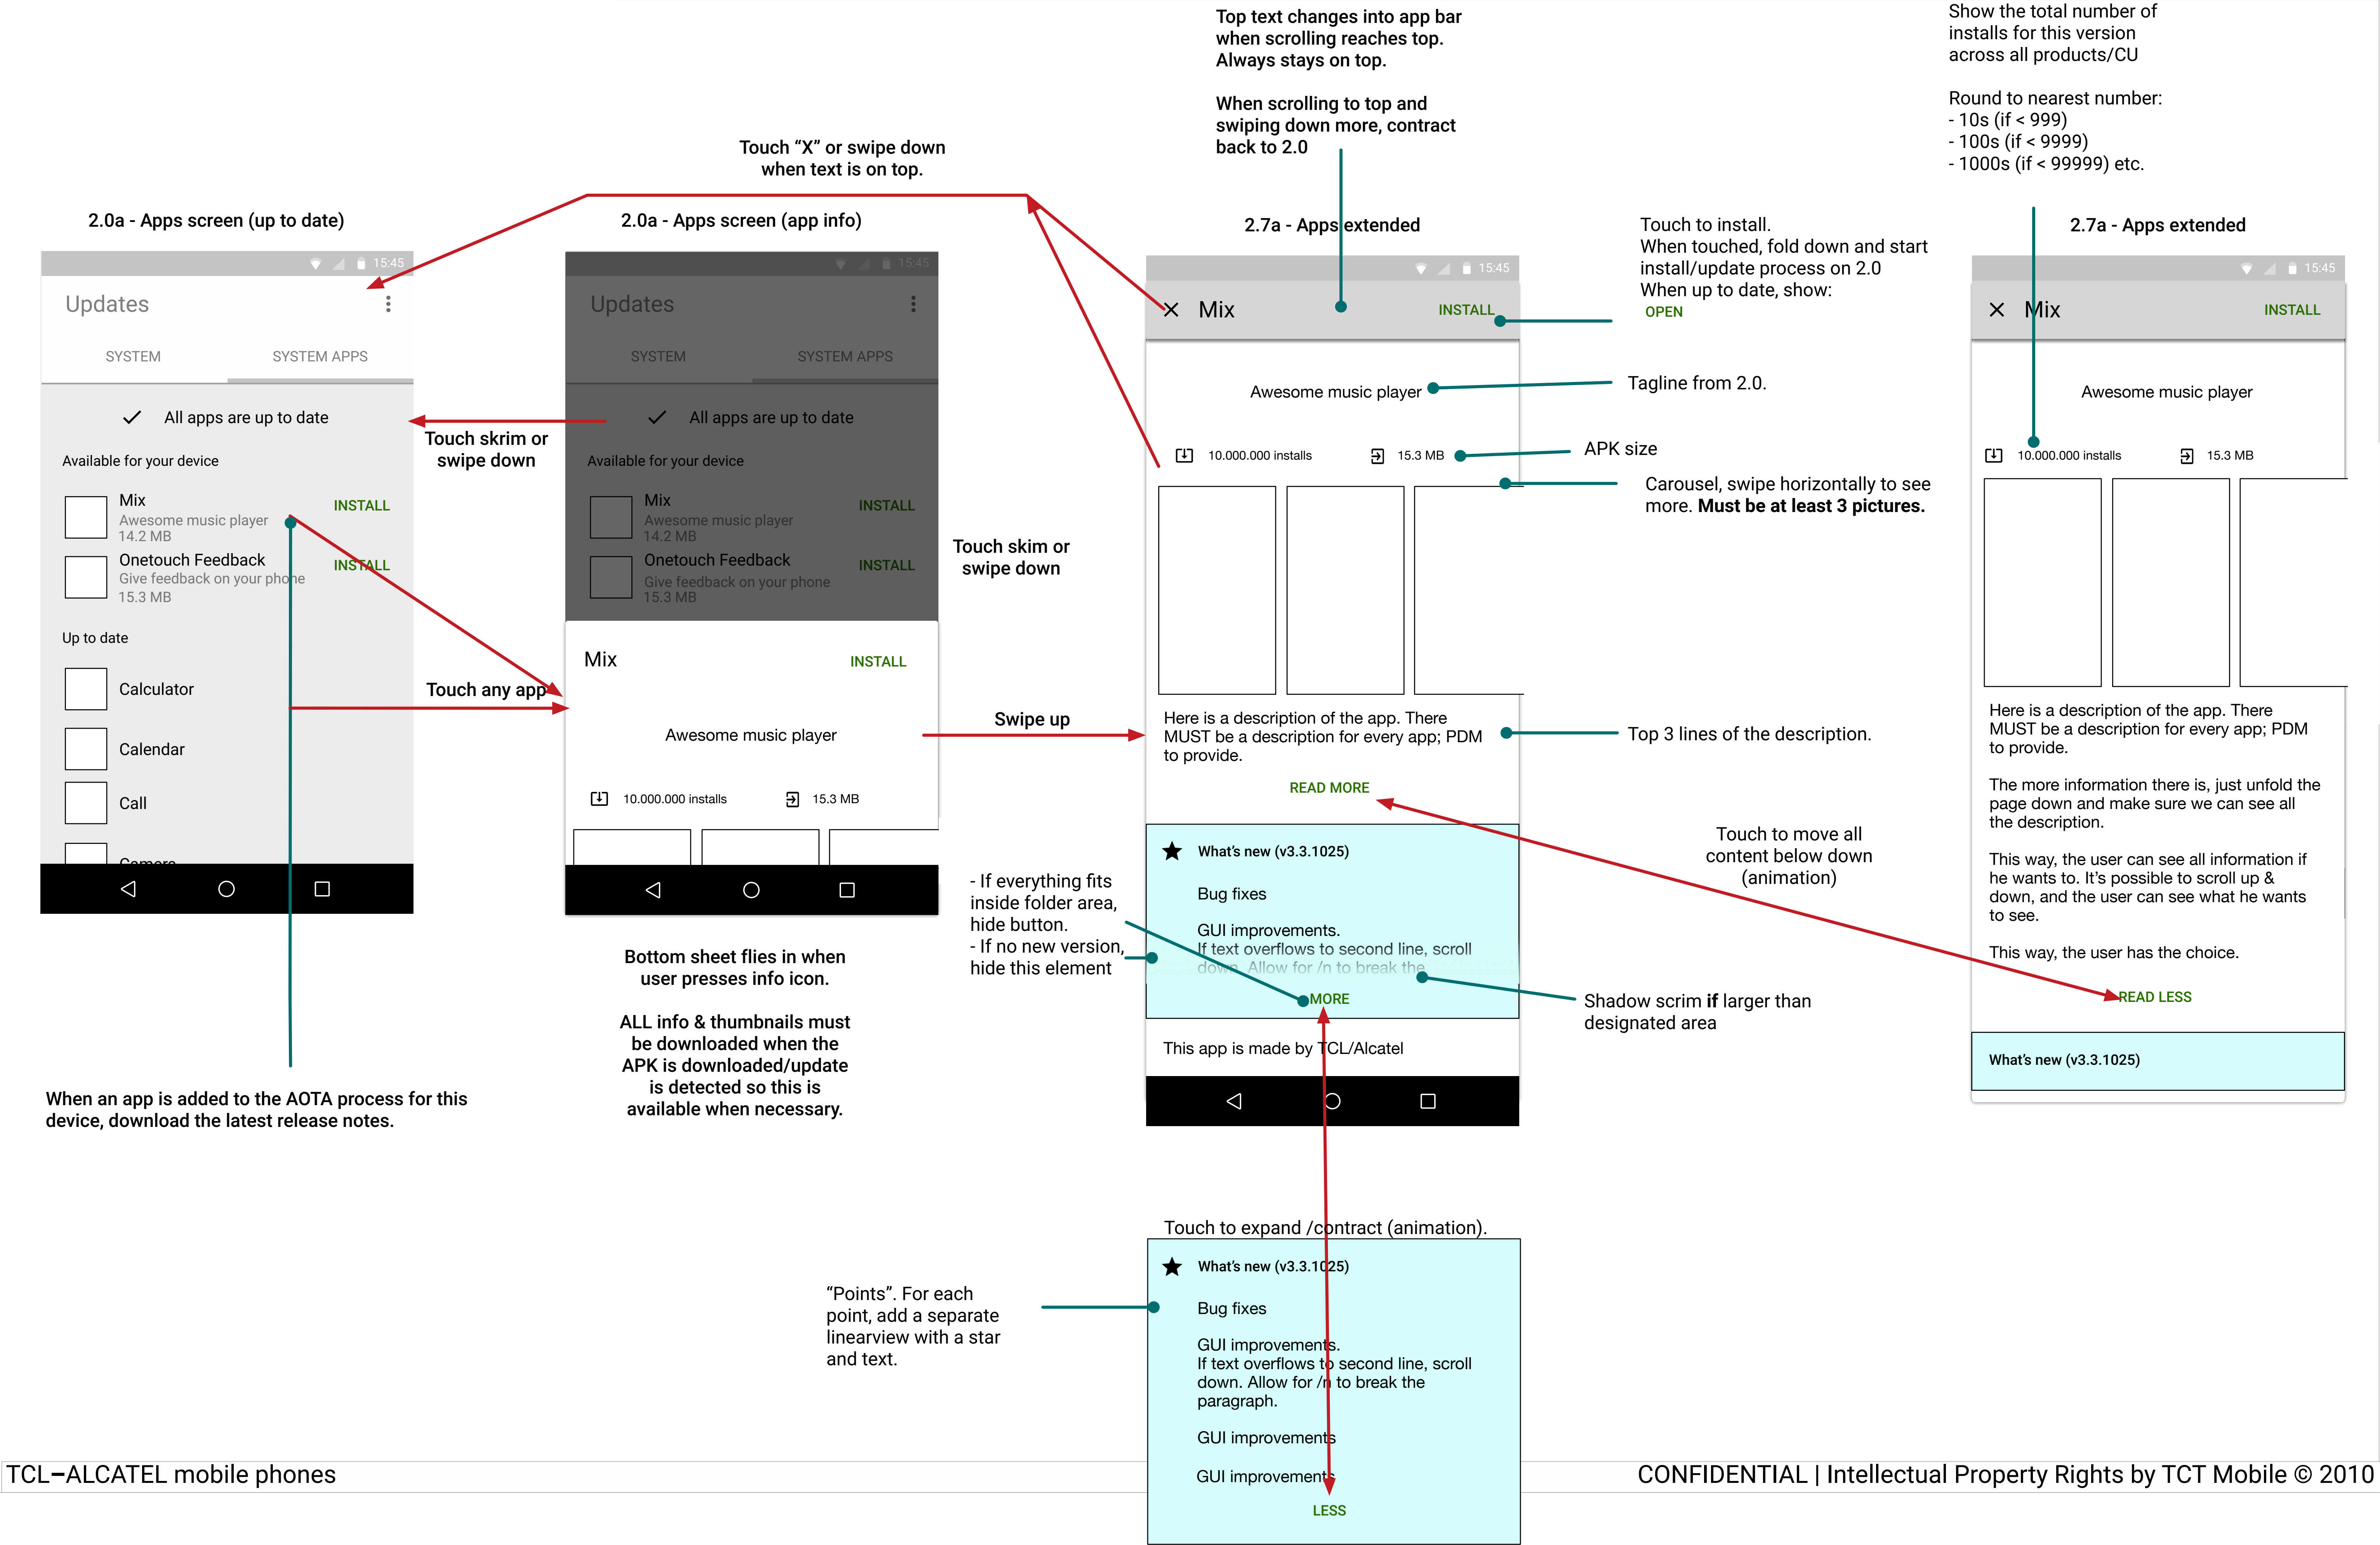

Touch to open website in browser.

4.0a- Overflow (advanced)

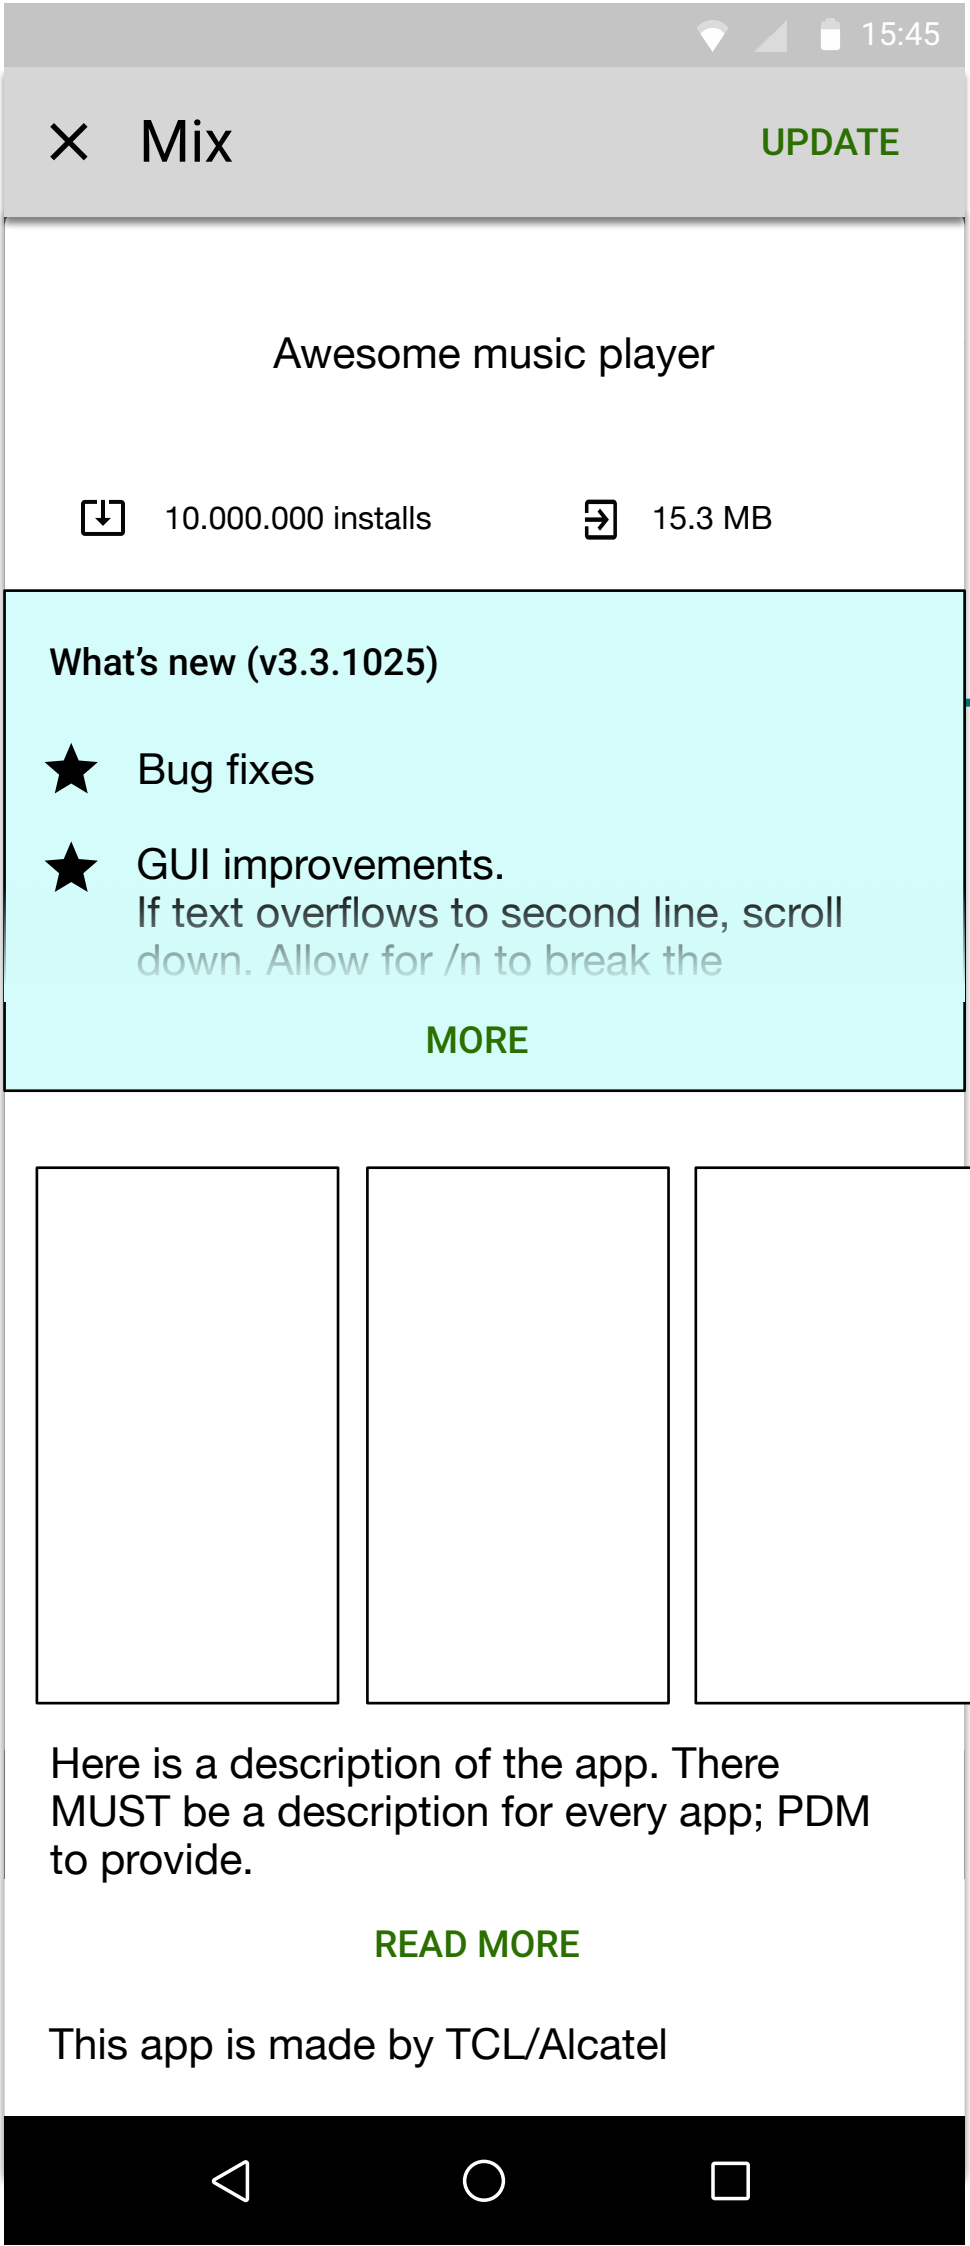

Open FOTA test/Project test respectfully.
Not in ergo to avoid maintenance on internal features.

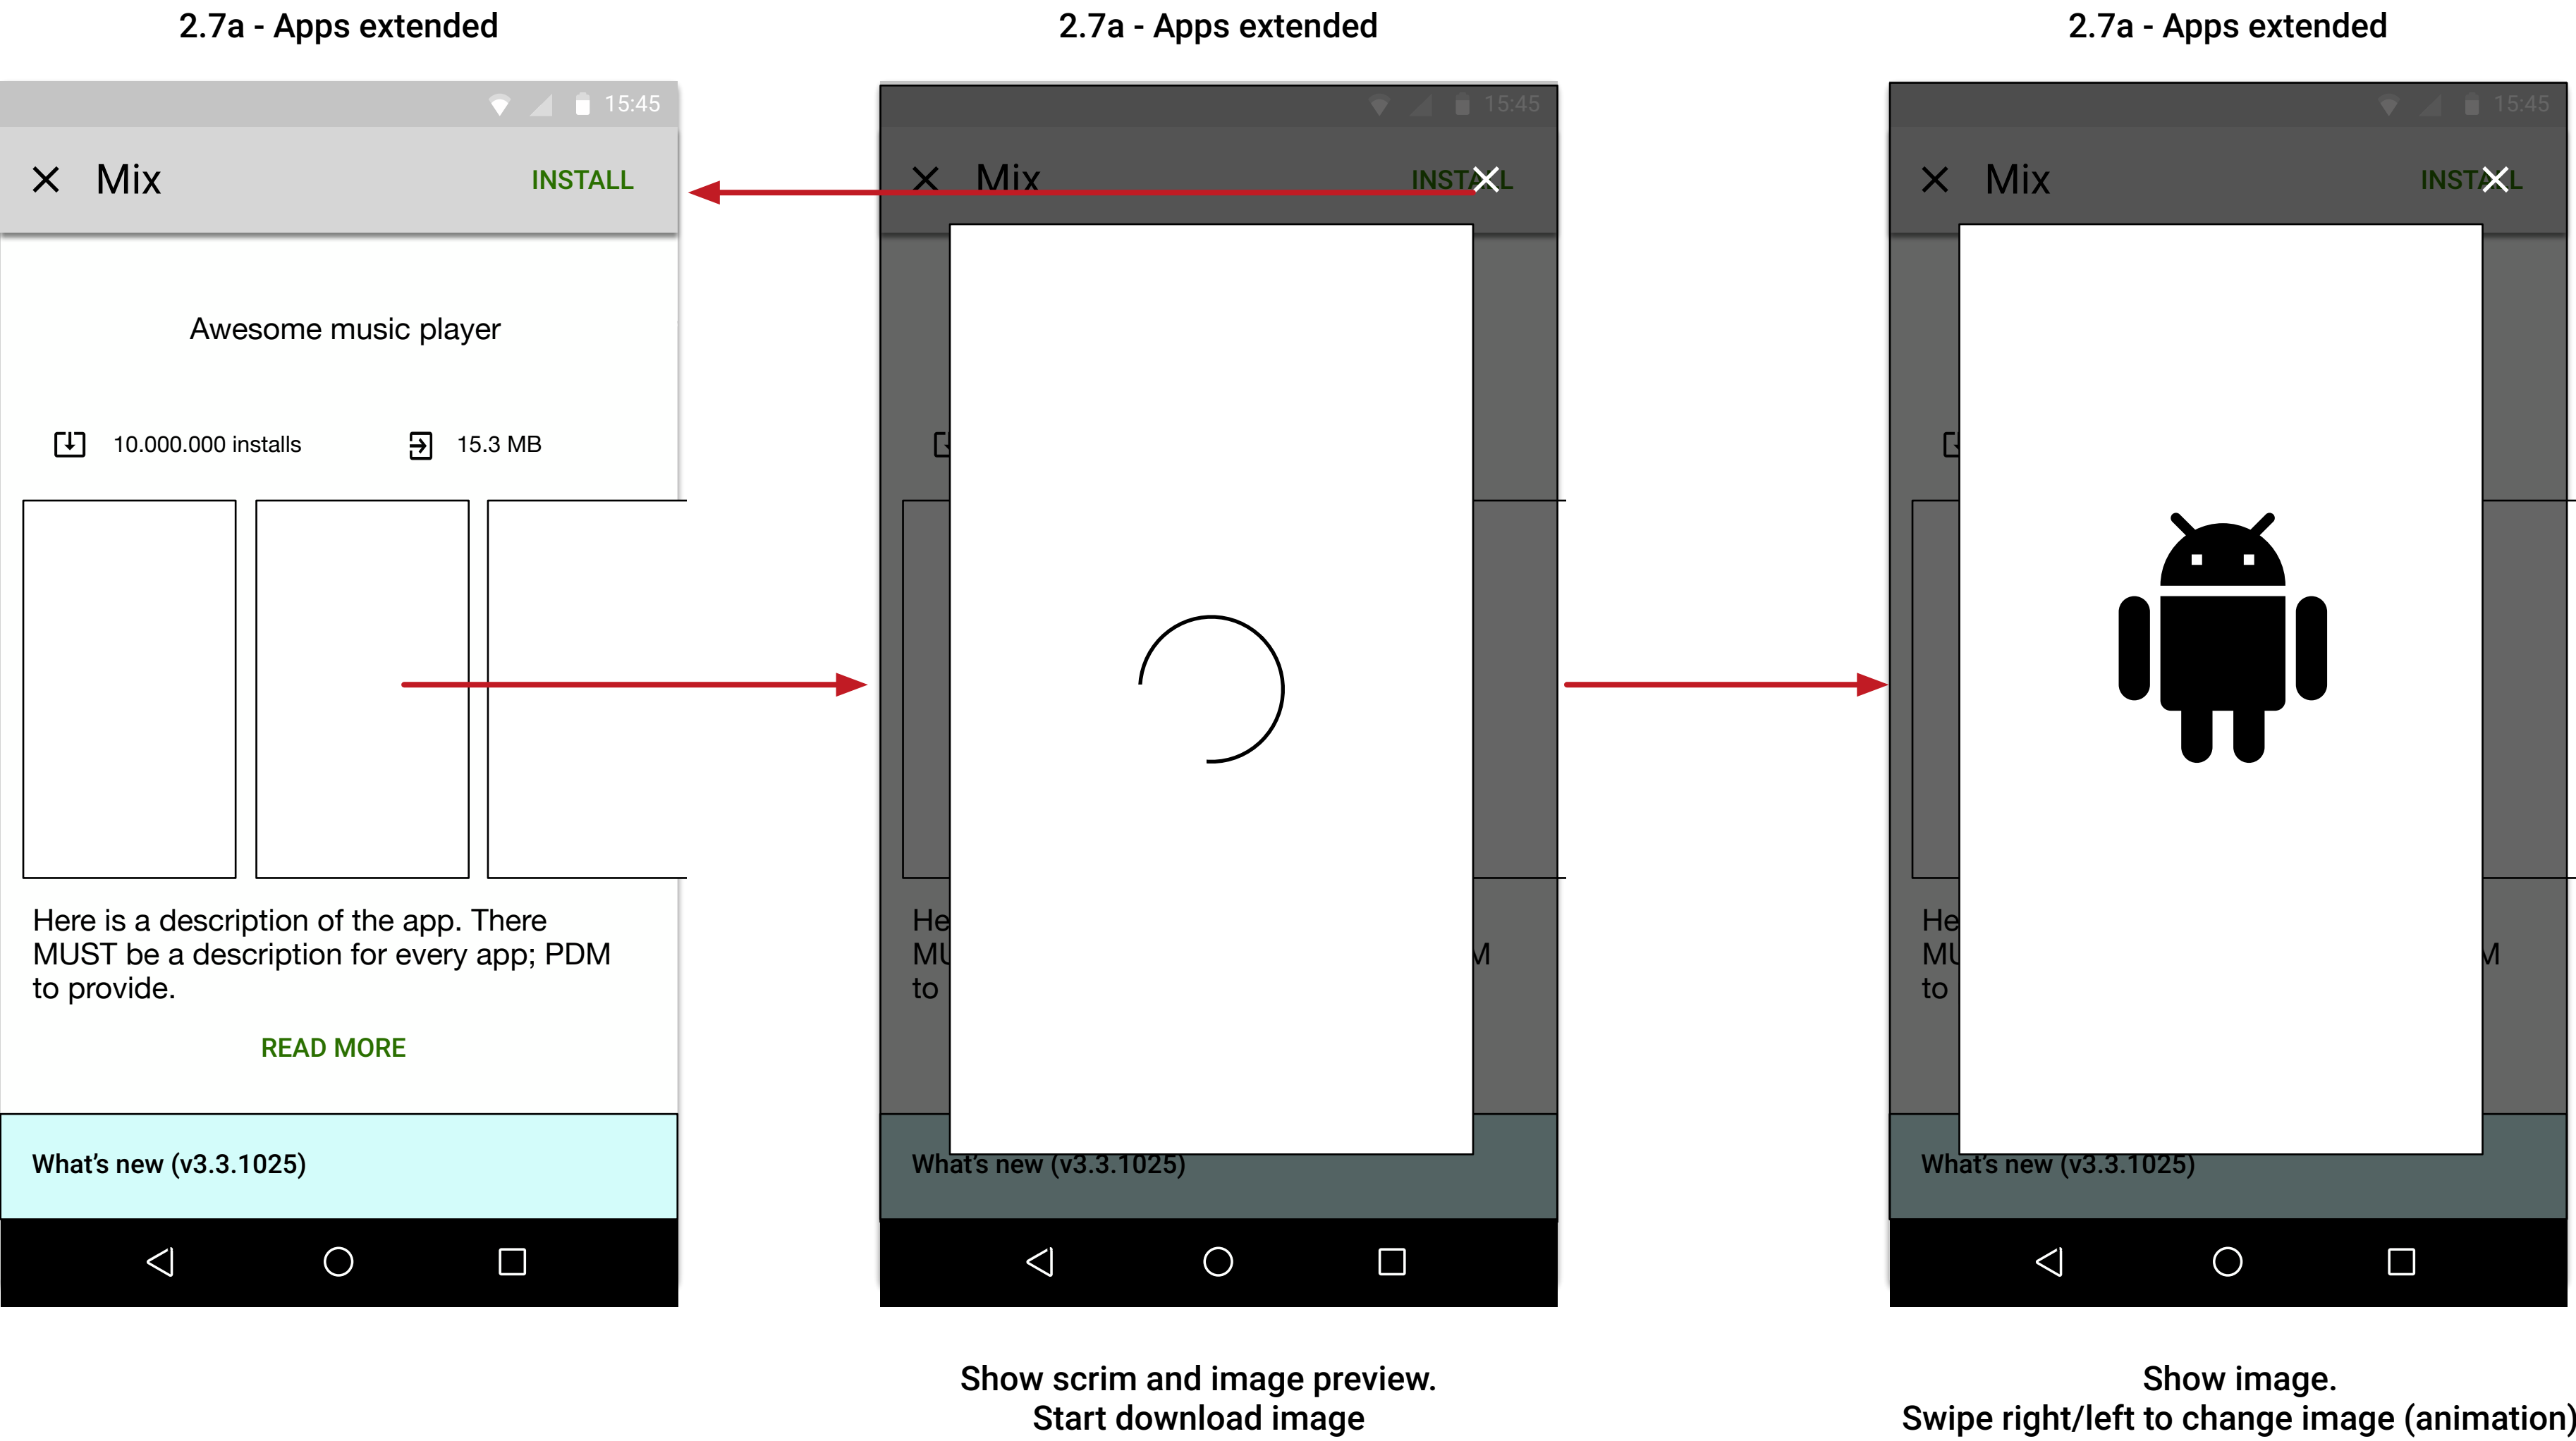

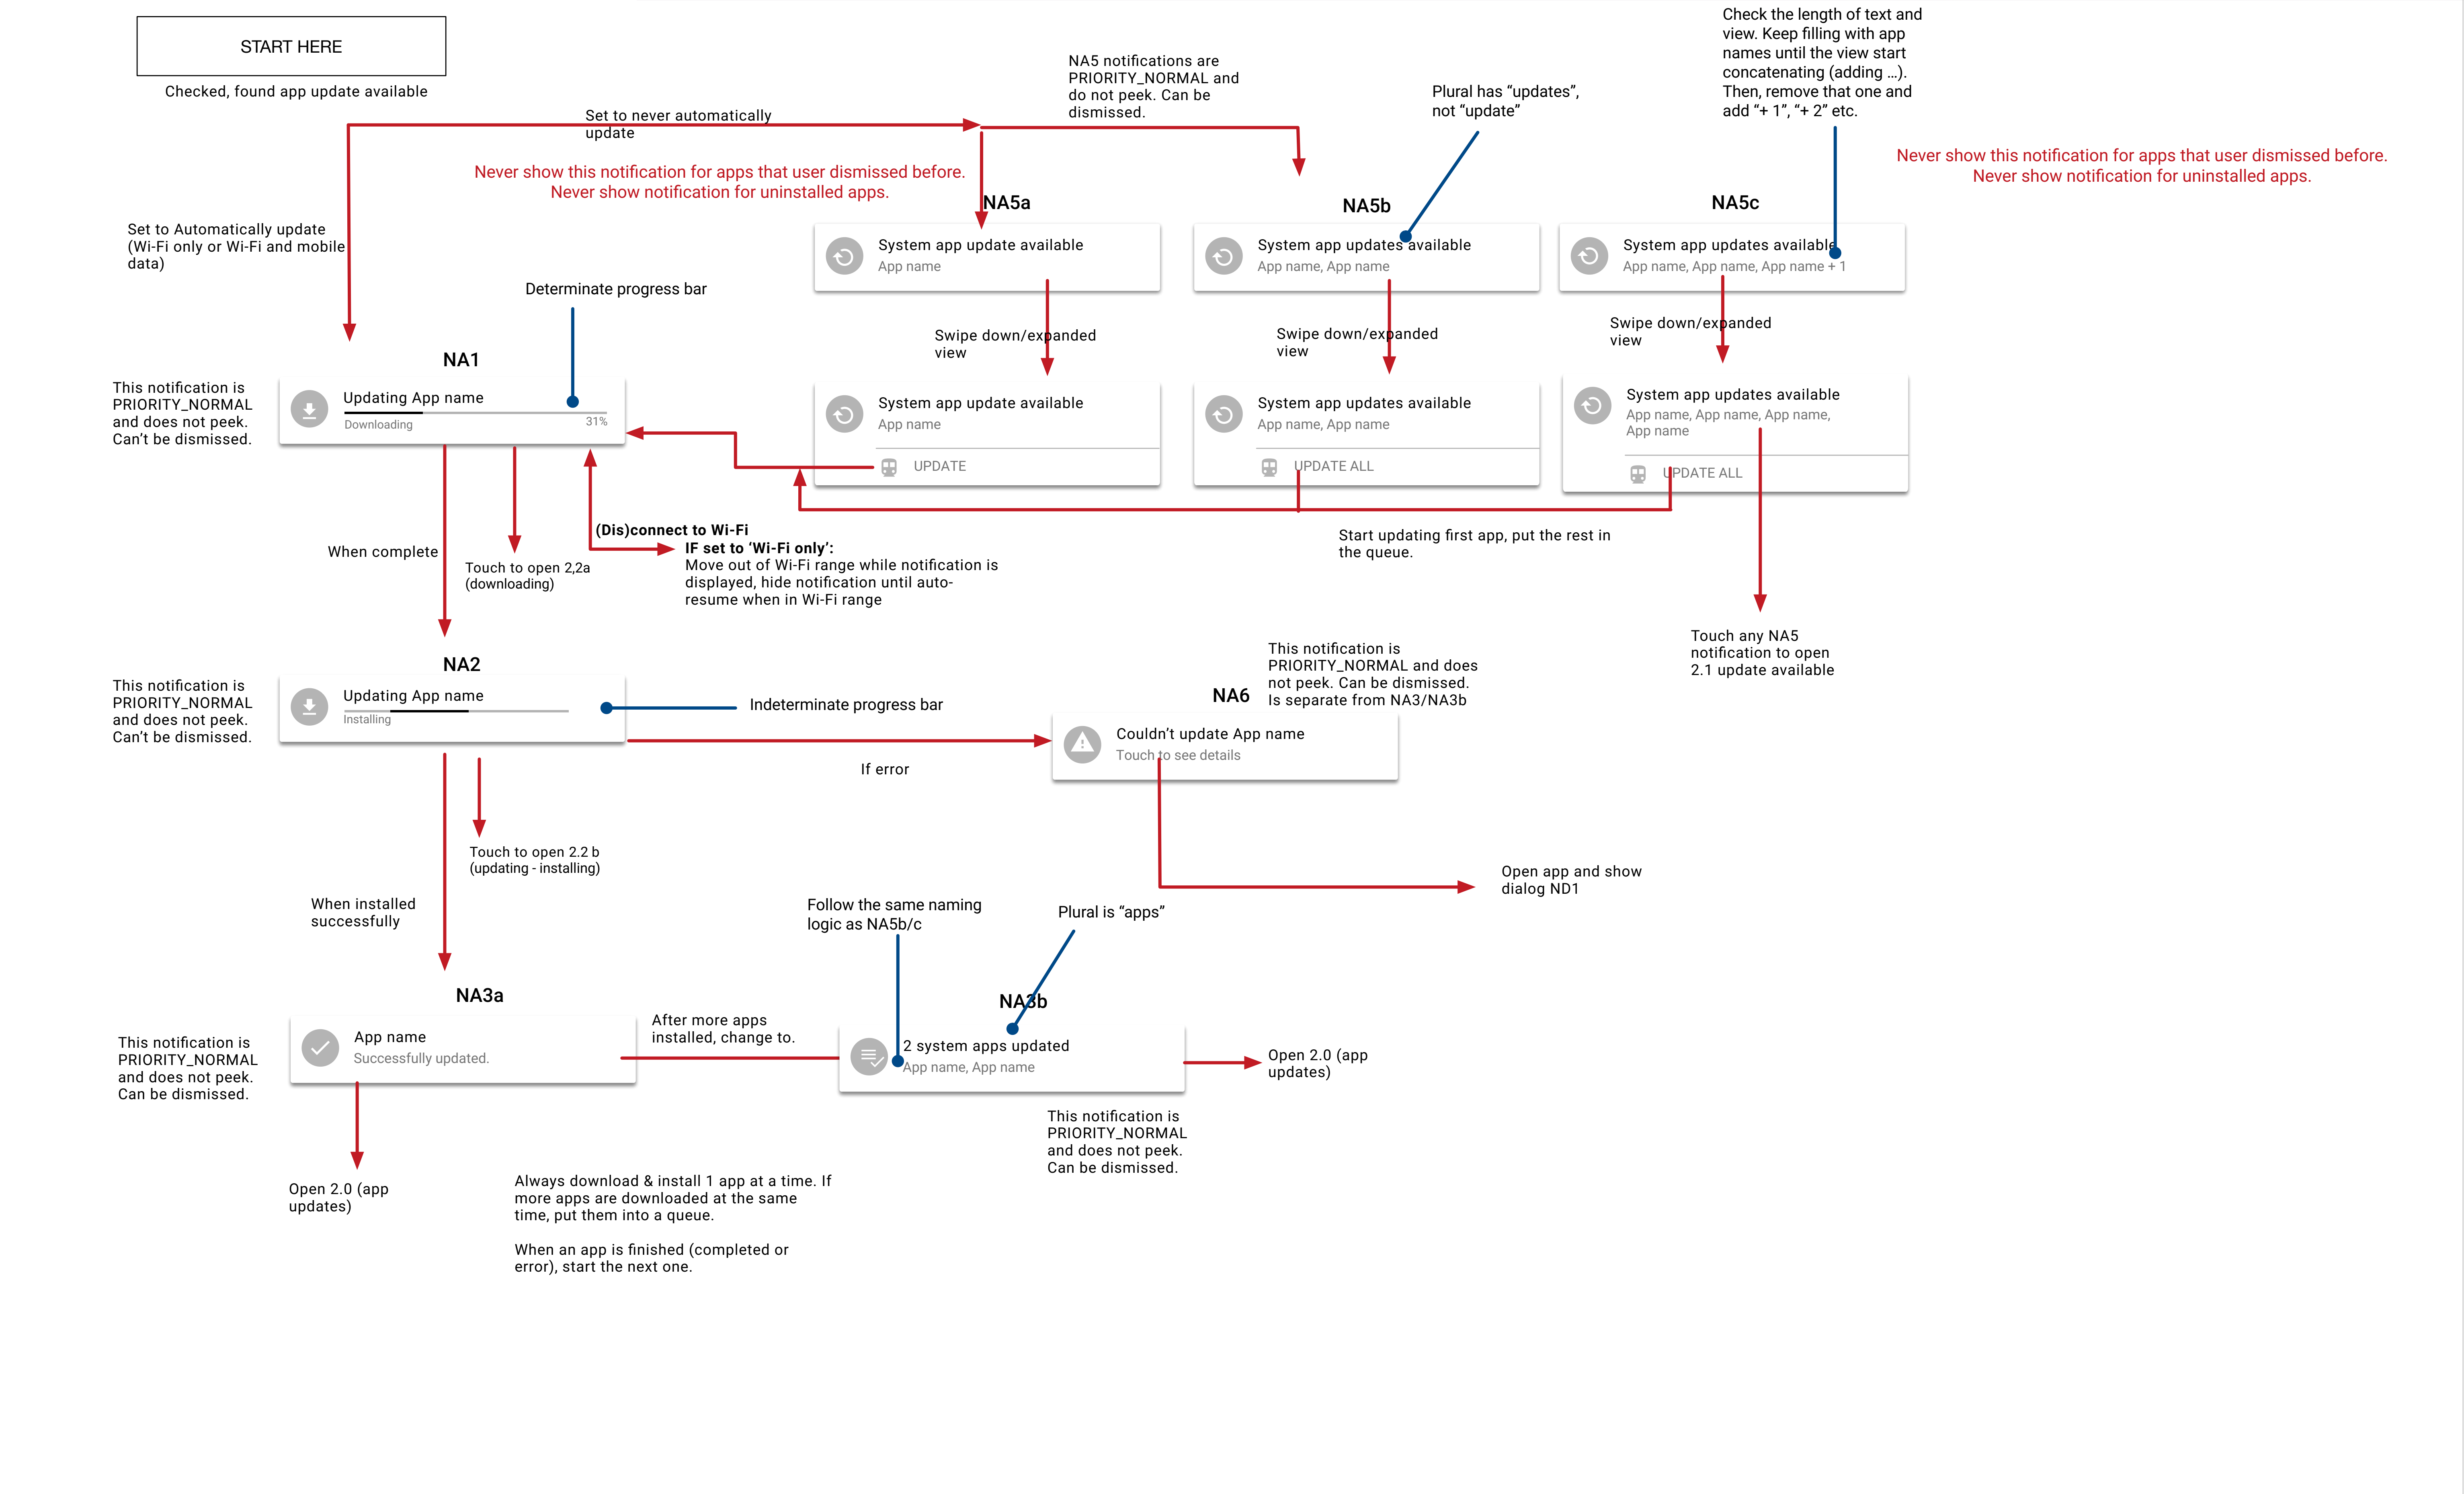

2.7a - Apps extended

If the app is not up to date, show install.

If the app is not up to date, move “What’s new’ up

Onetouch Feedback

If at the end of the 'UPDATE ALL' update cycle some apps are un-queued, don't show the update all button, but wait until the activity is rebuild and then use normal logic.

Leave the INSTALL button, so users can choose to update these manually later.

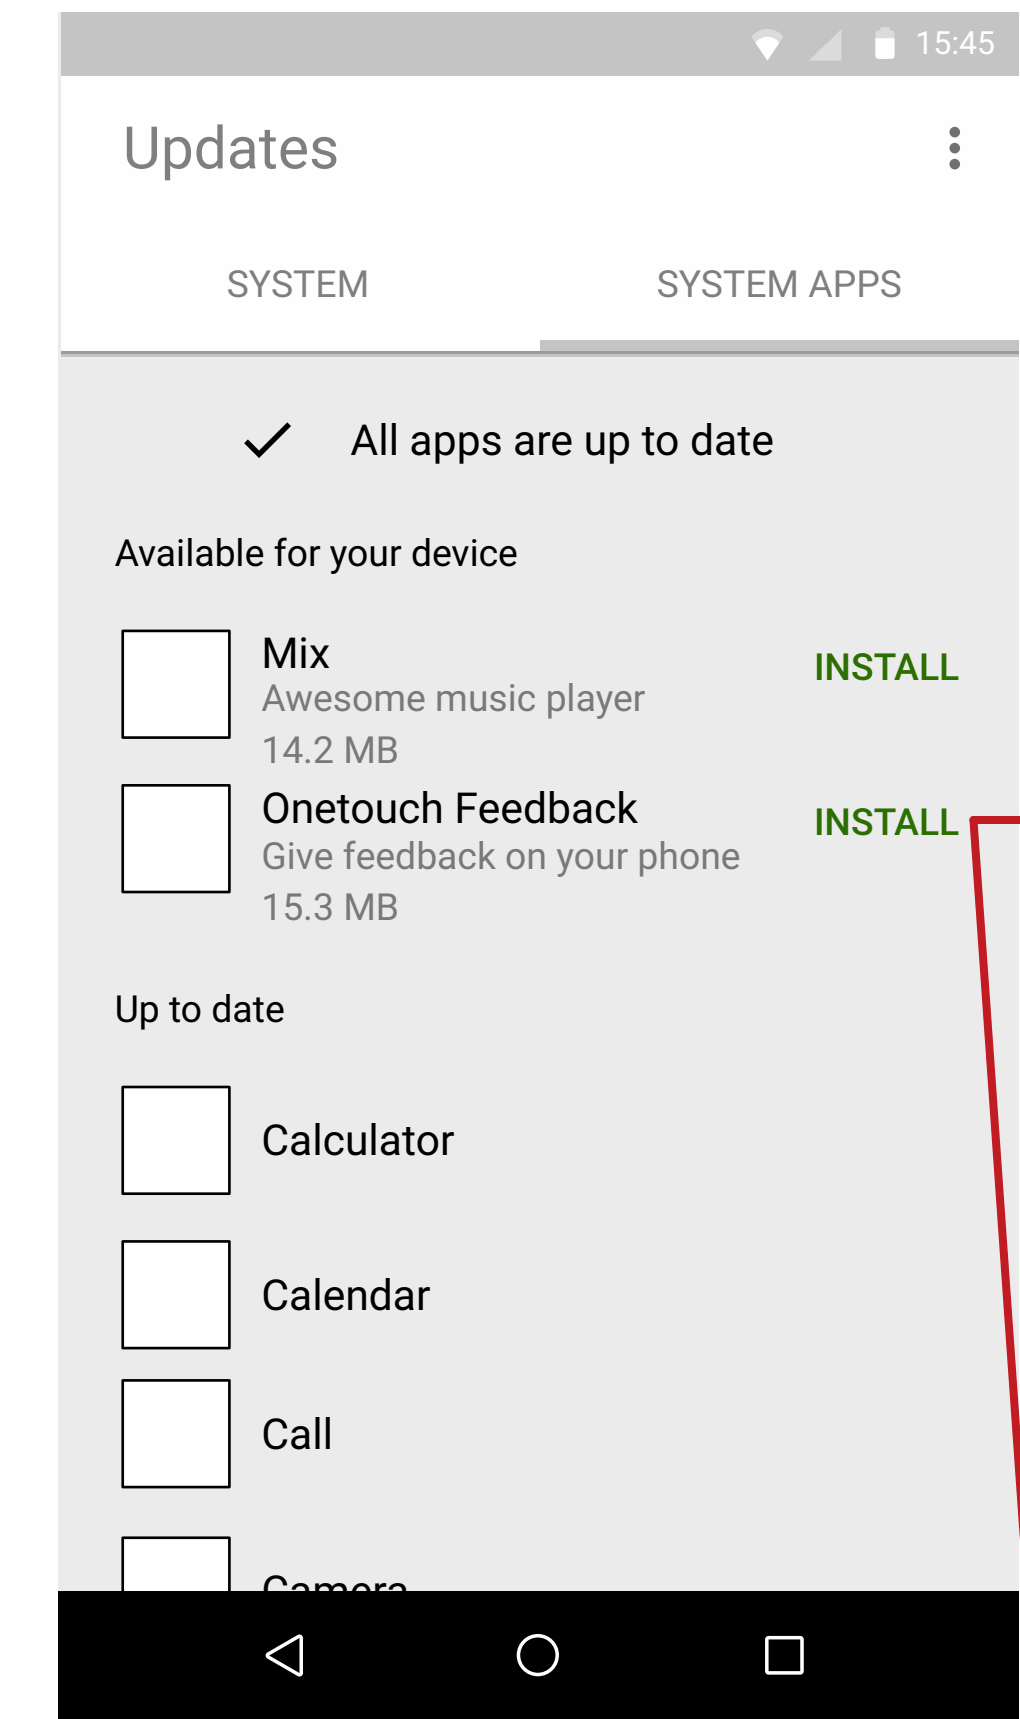

For installing, follow the same logic as updating. There is no ‘INSTALL ALL’ action.

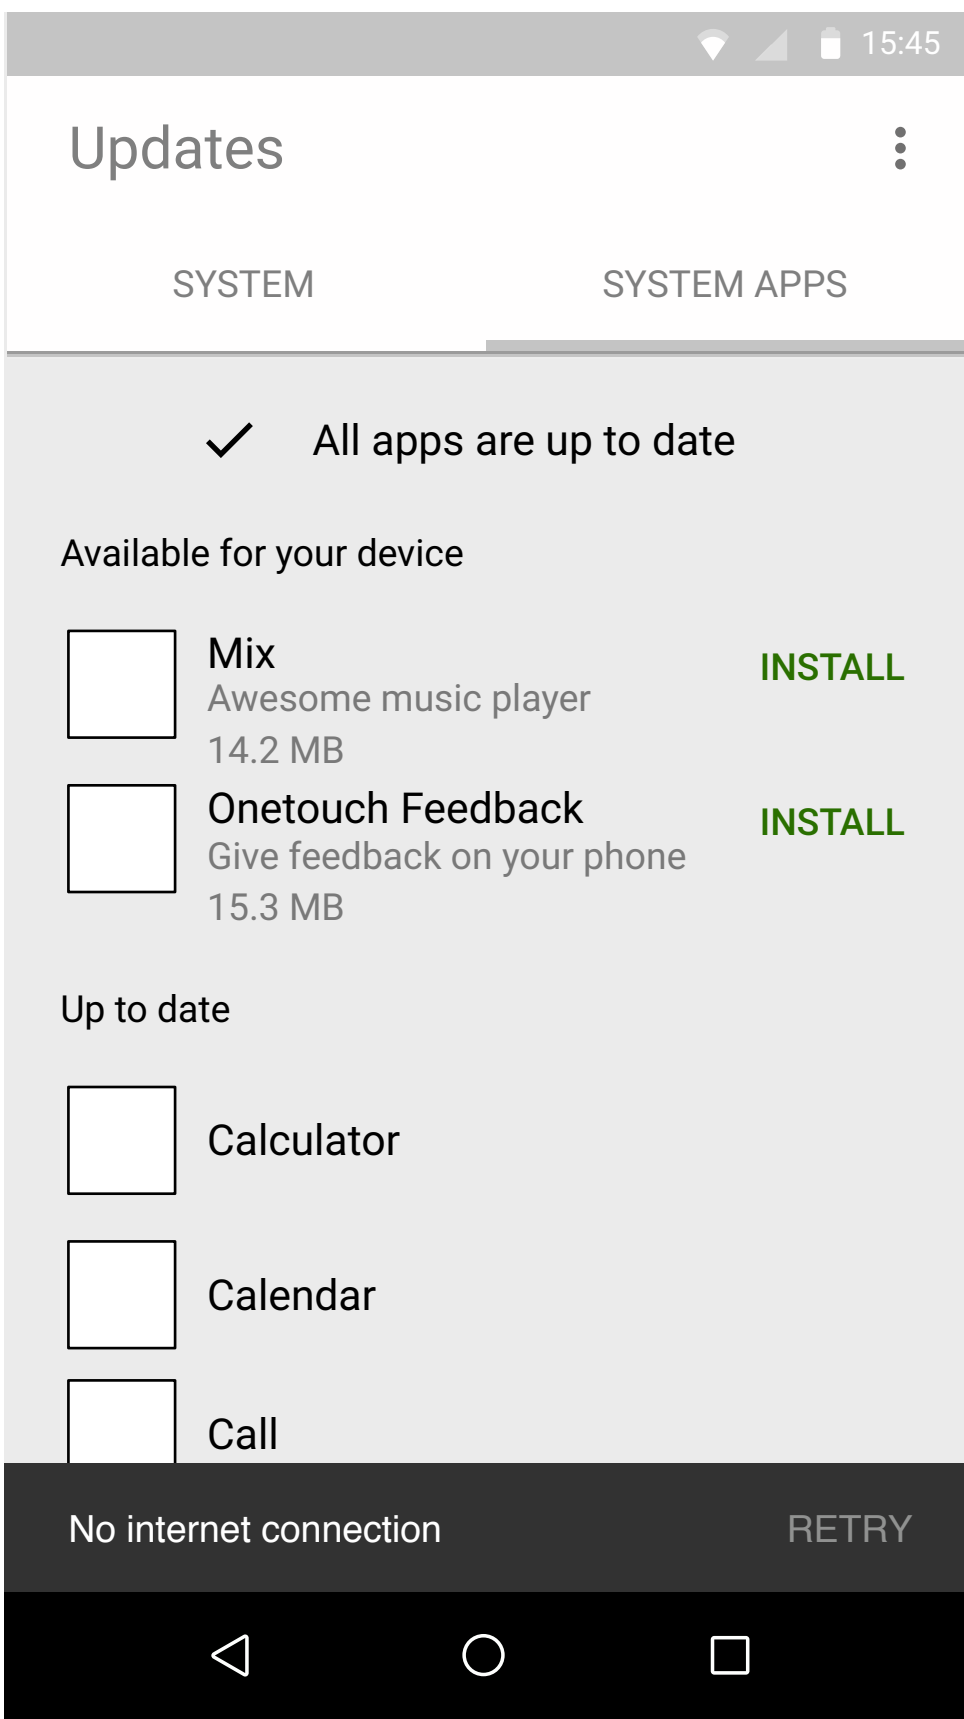

Activate the corresponding notification flow (NI) when the download is started.

The QUEUE logic spans between installs and updates. If a user starts installing and downloading applications, treat them as one queue.

2.0a - Apps screen (up to date)

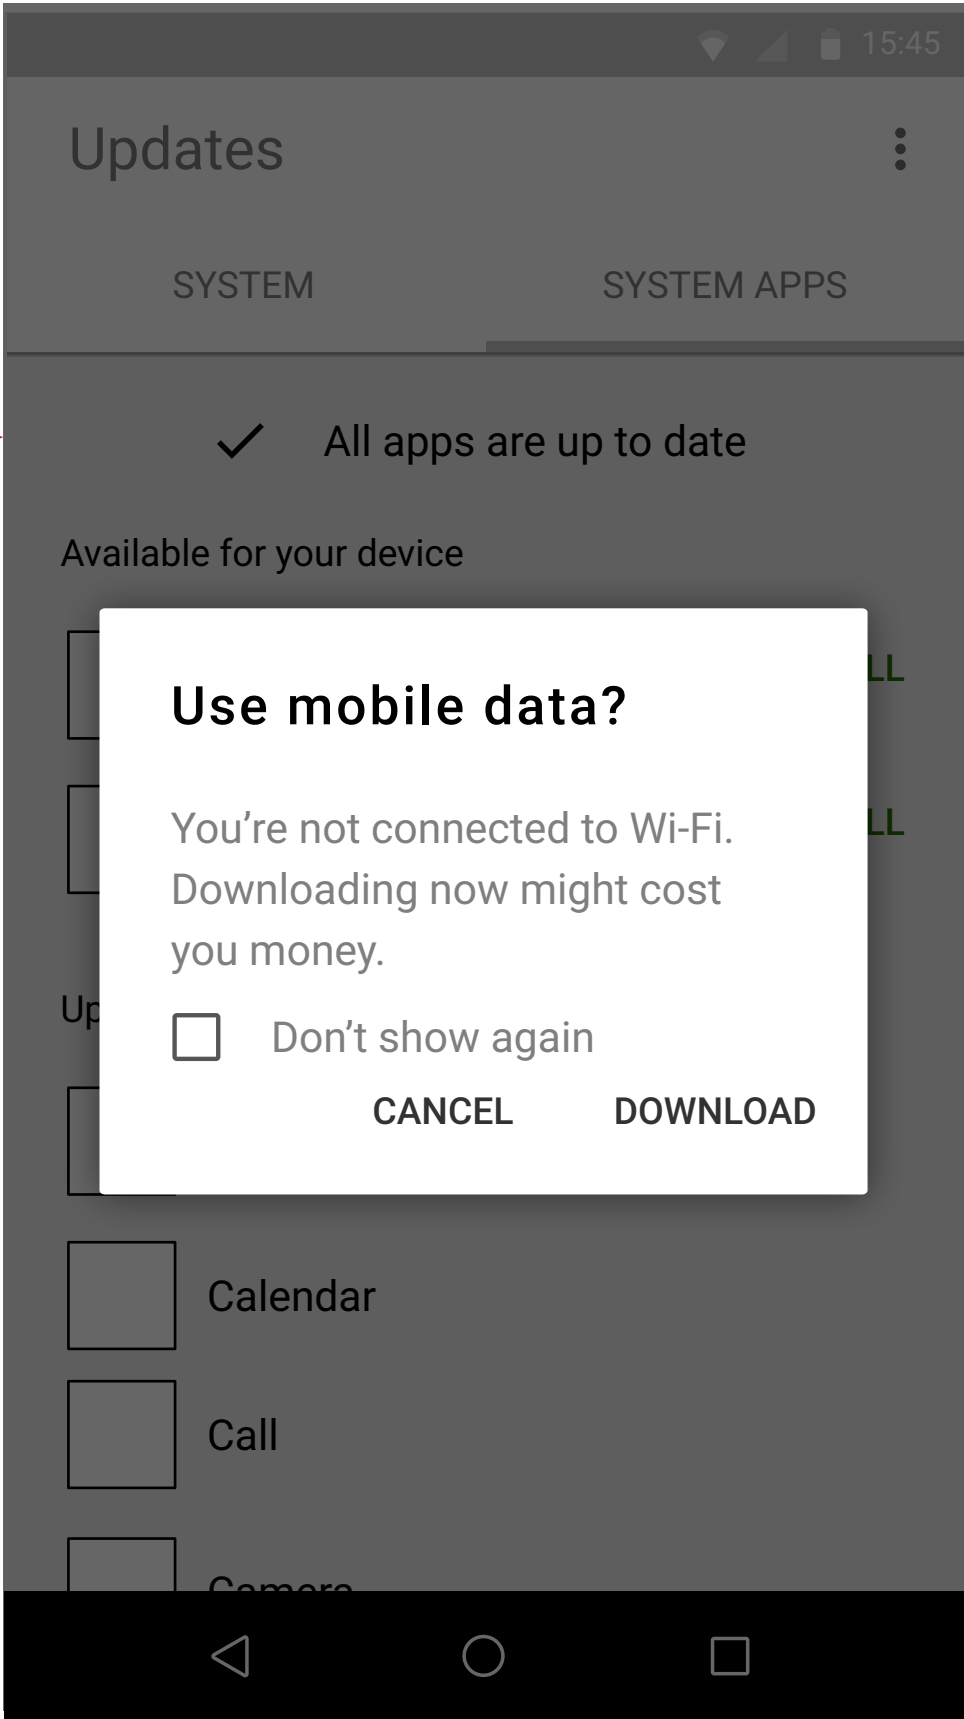

2.0a - Apps screen (no internet installing)

If no internet is detected, toast. RETRY checks again

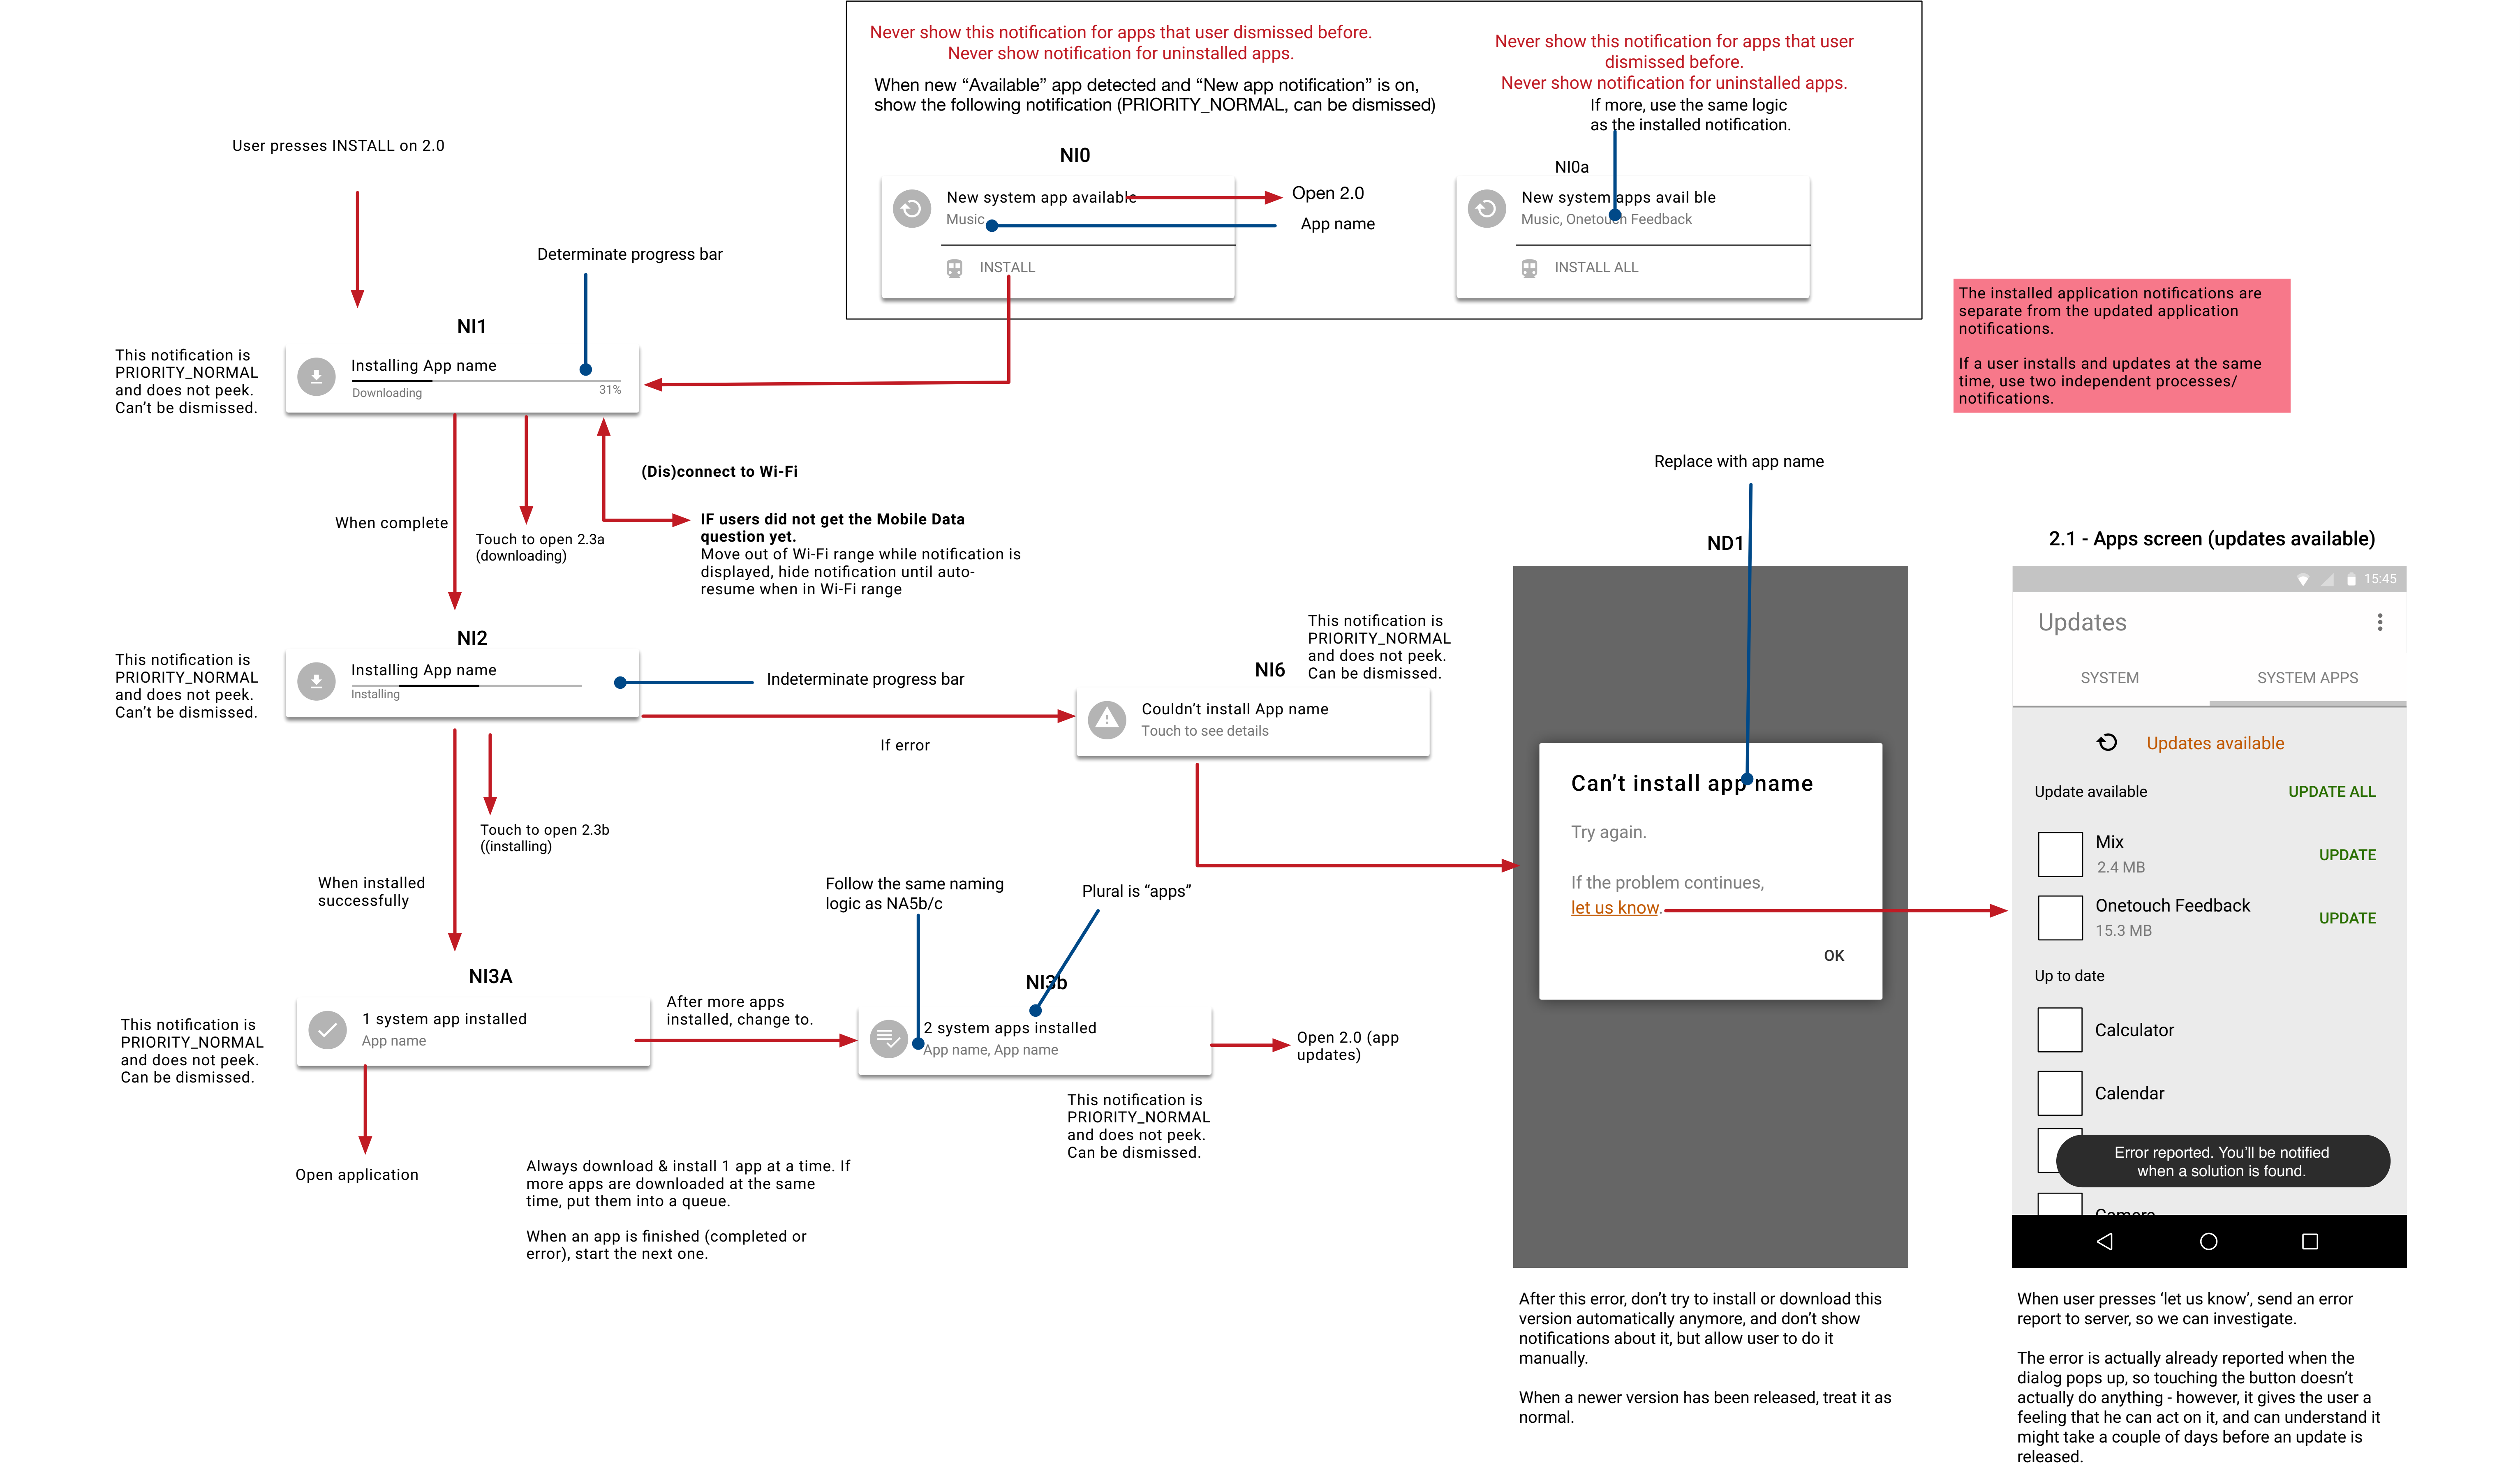

NA2 - mobile data

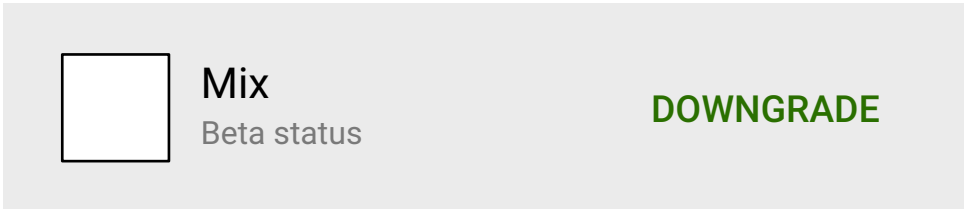

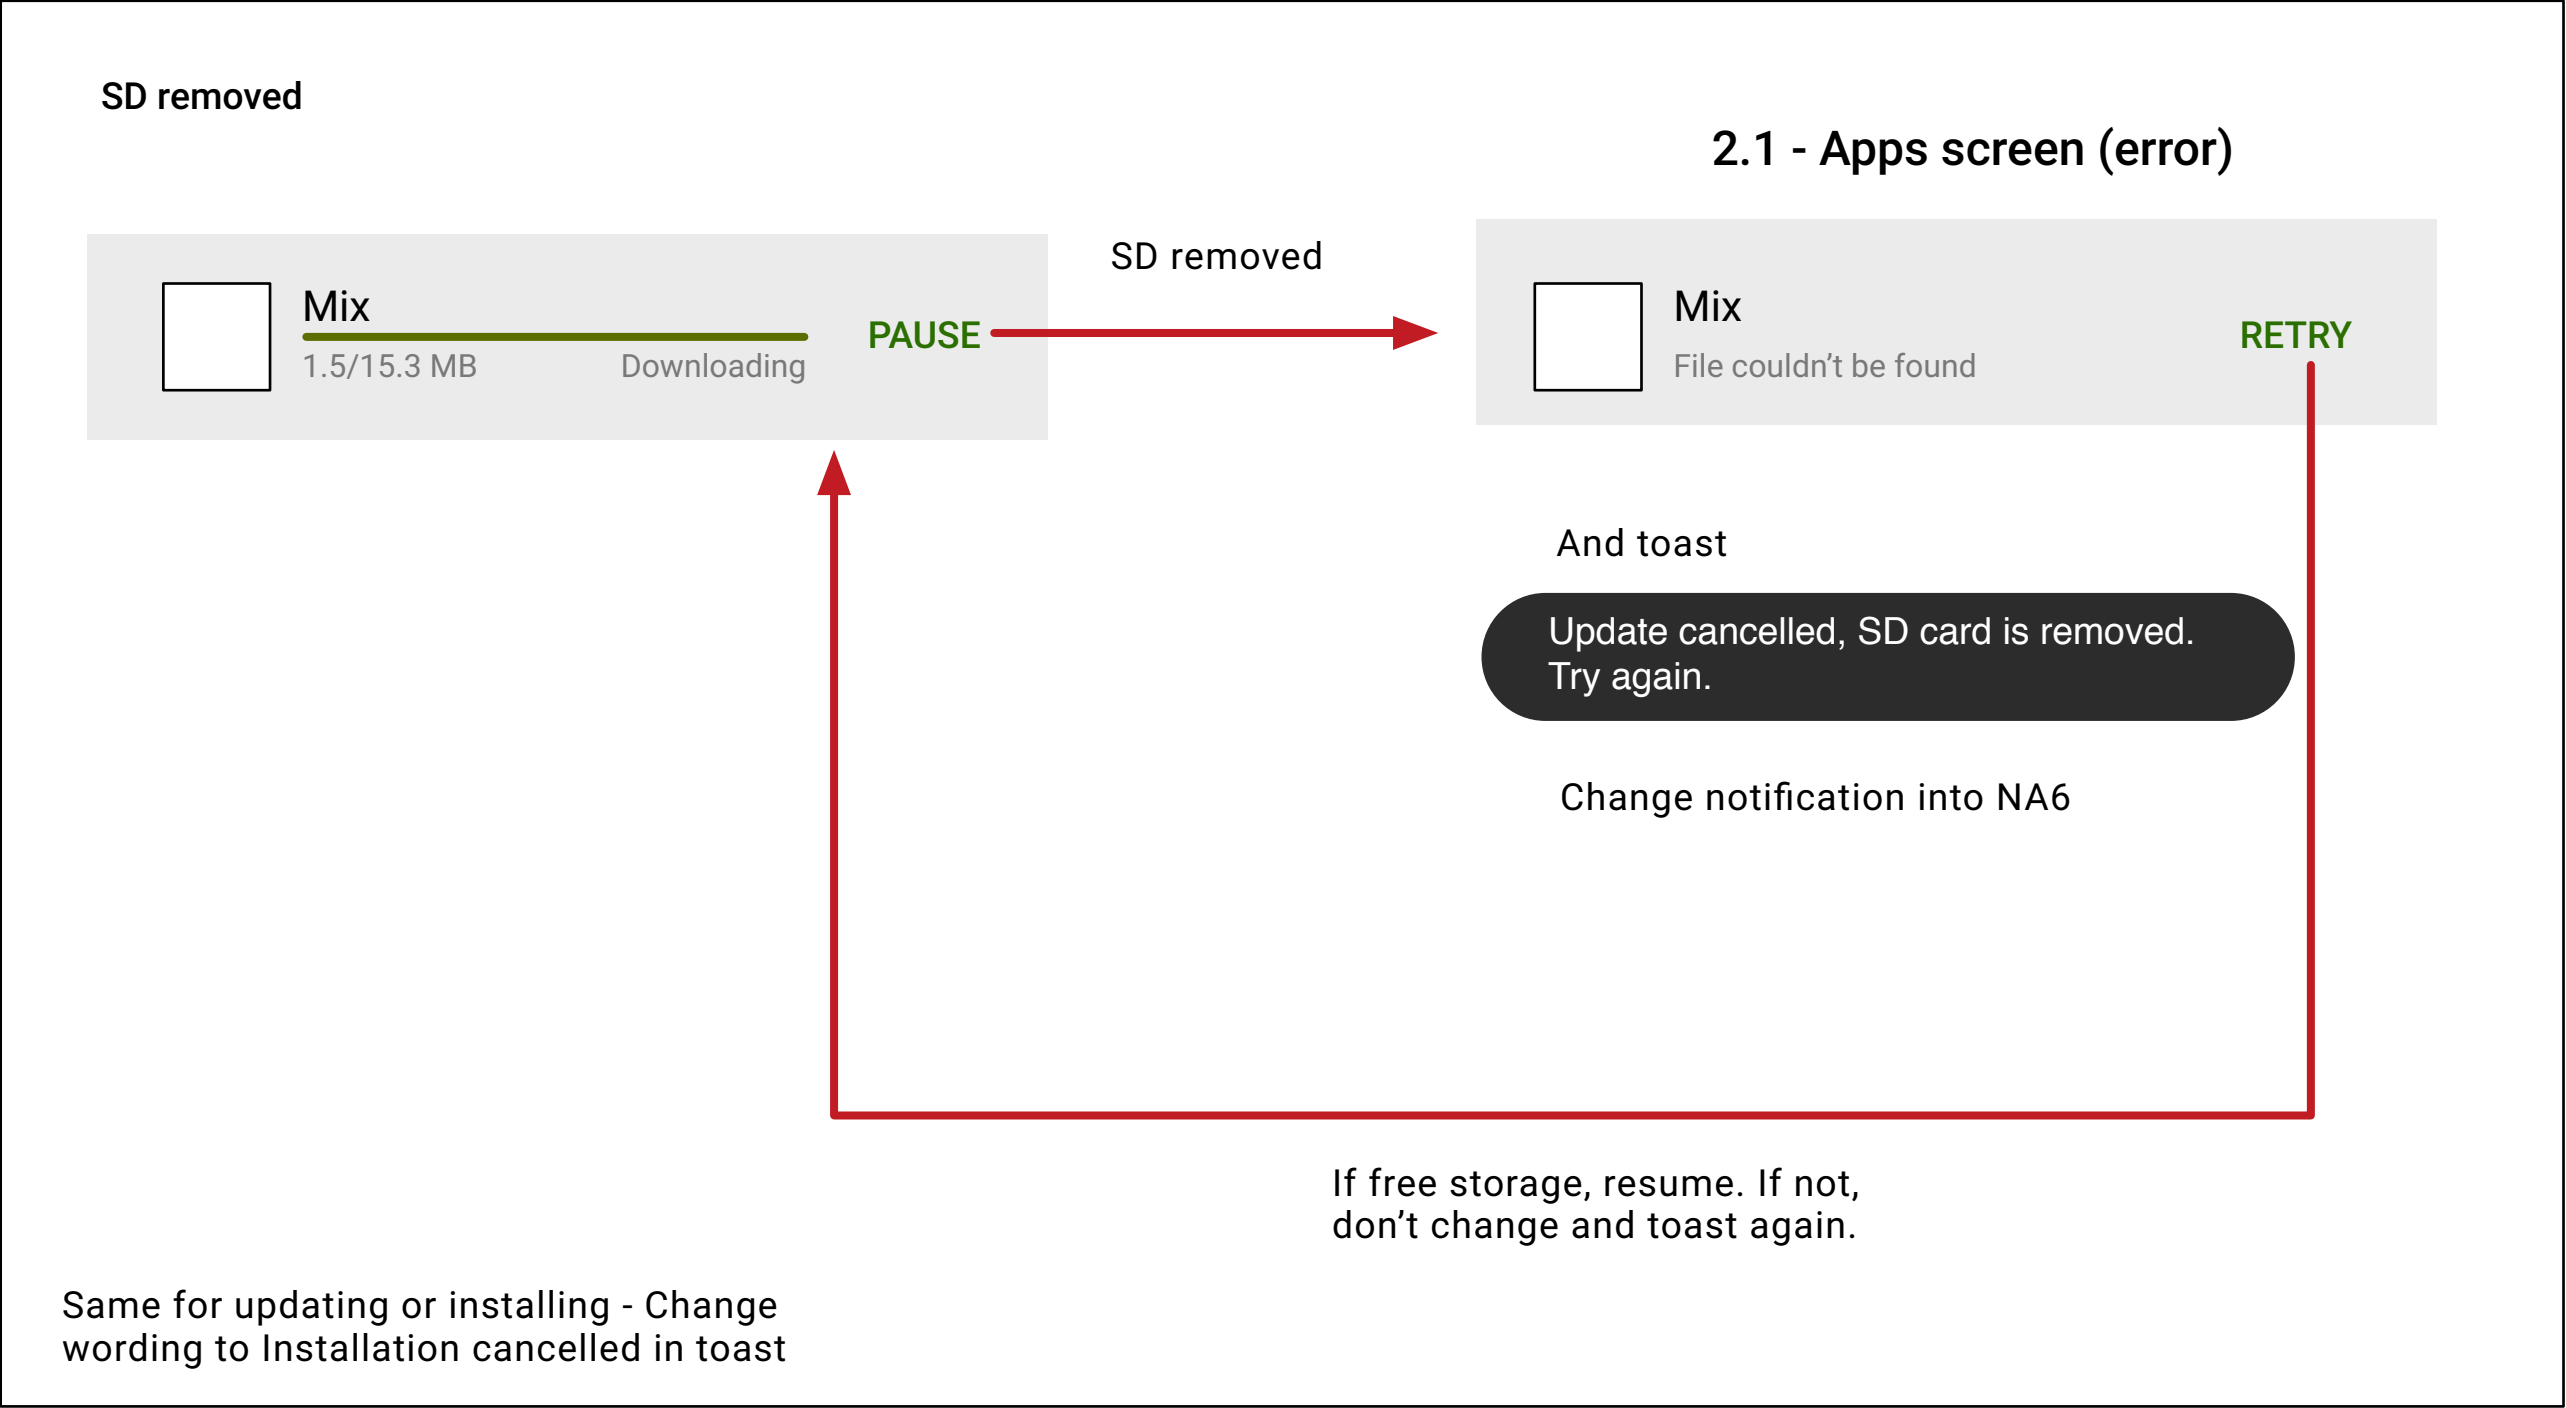

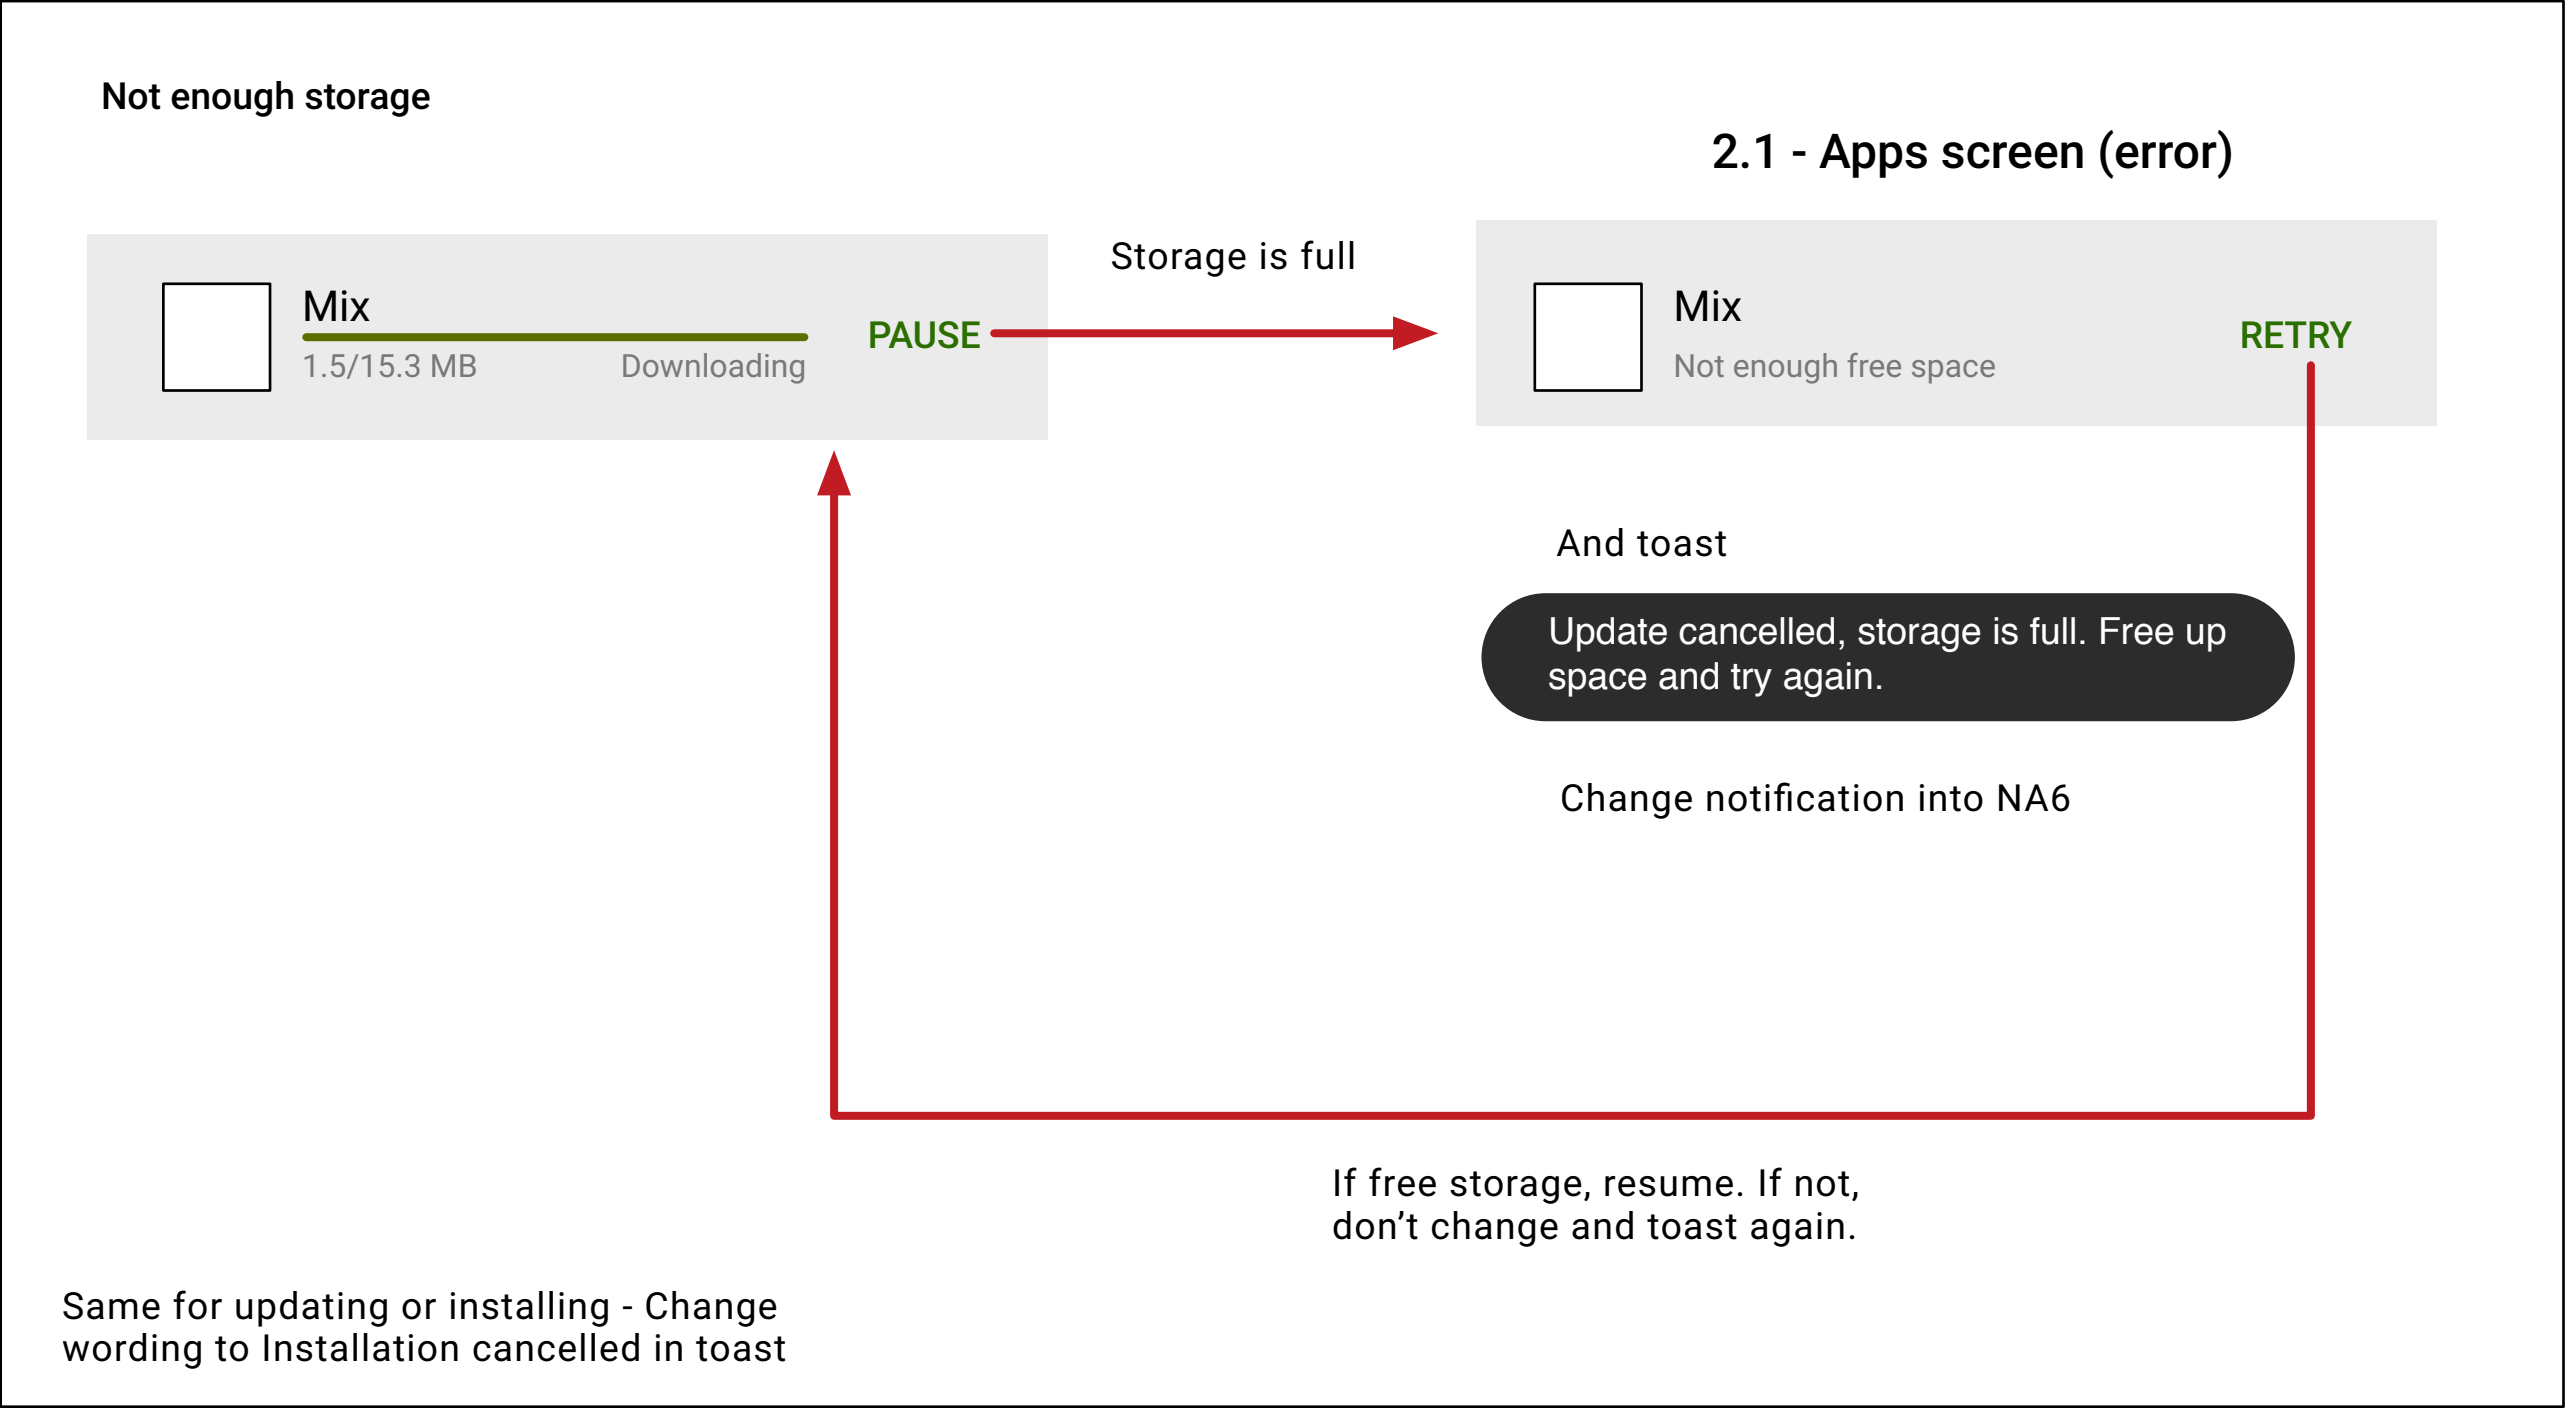

If no Wi-Fi and 'automatically update' is not set to Wi-Fi & mobile data

If user says 'Download", download all selected apps to download.

If user saw this notification, don't pause in background again if Wi-Fi is connected/disconnected - keep downloading until finished.

FOTA only

1.0b - Home screen (no app updates)

FOTA entrance for carrier

Extra App updates for AOTA

If carrier does not take FOTA, install AOTA only. Do not have app icon, only system entrance.

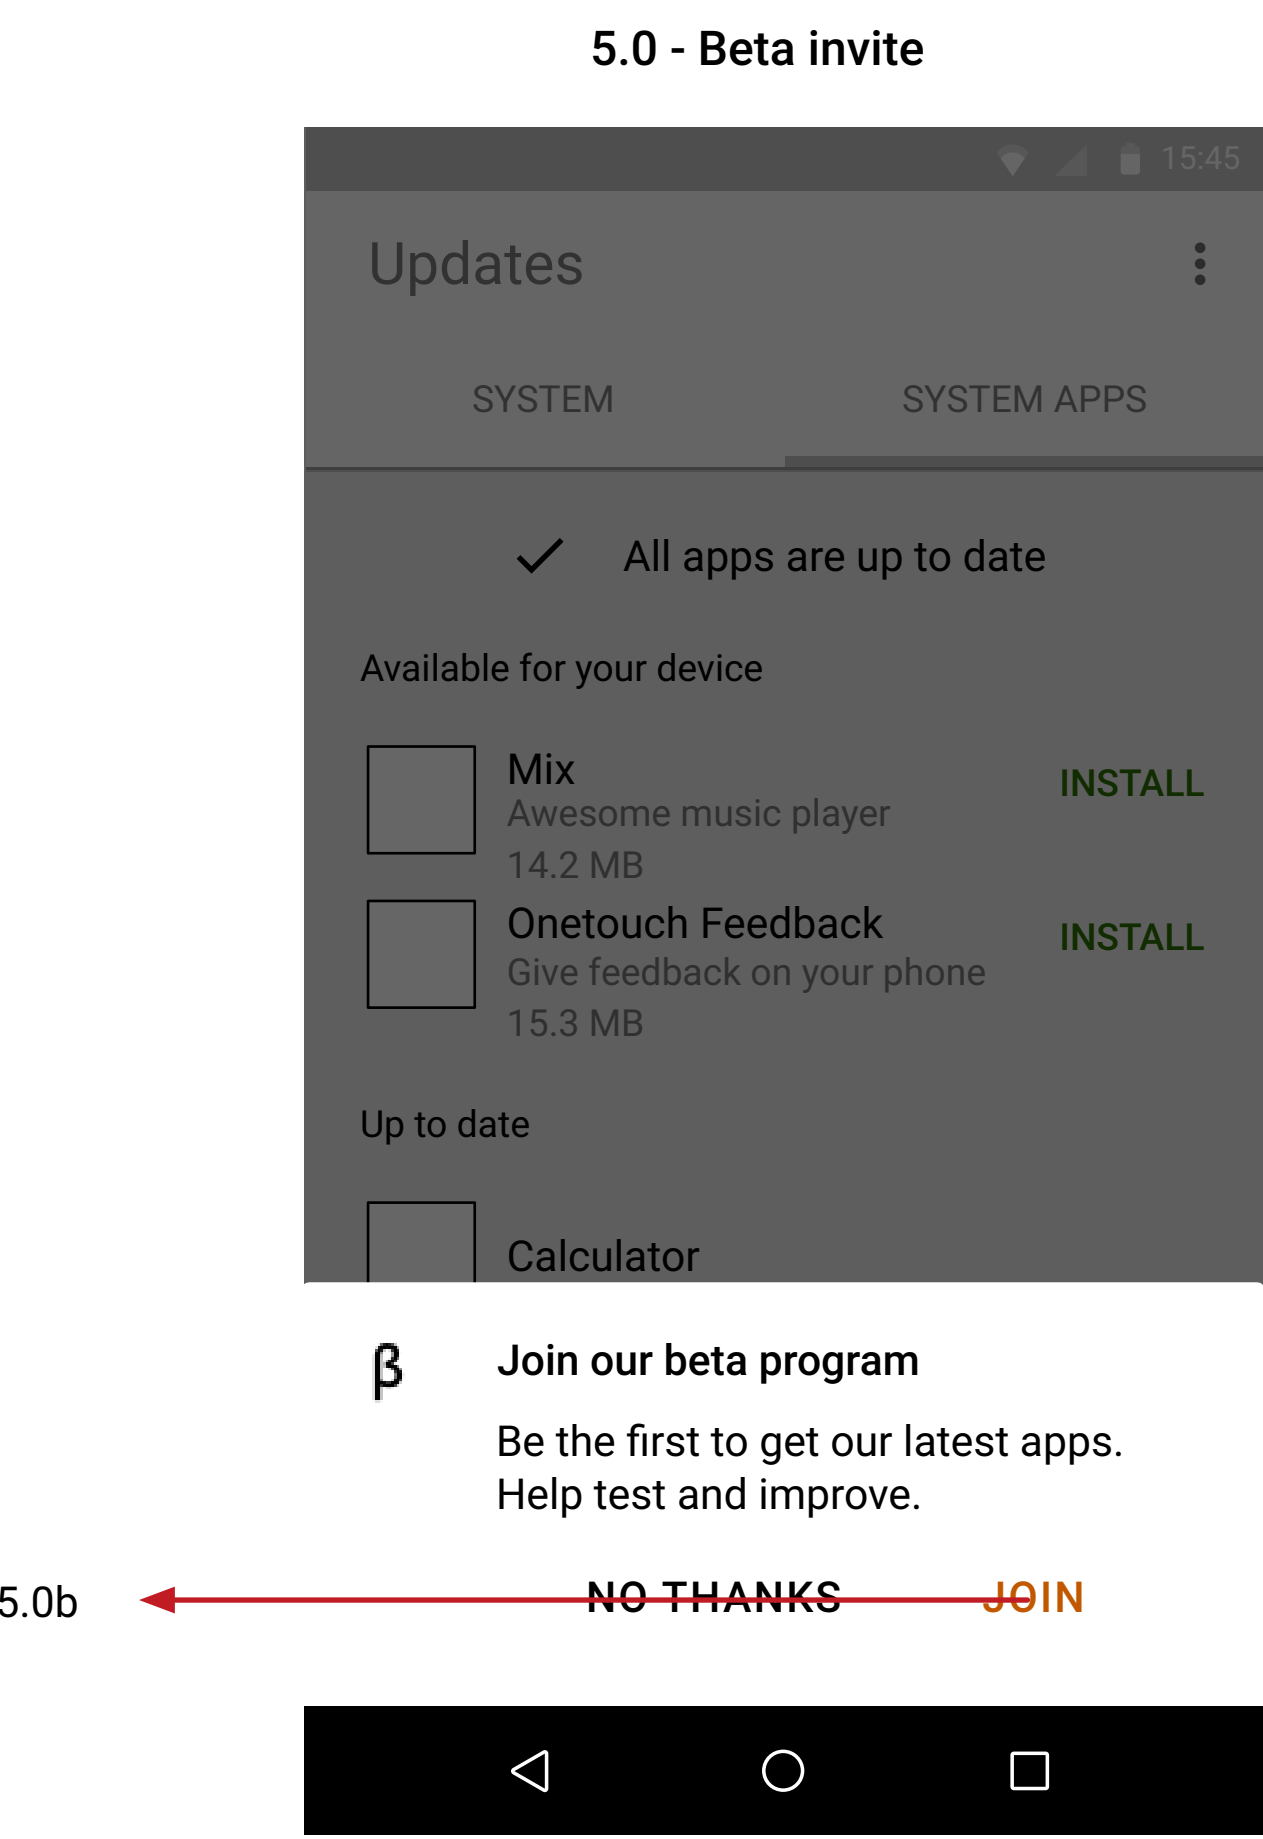

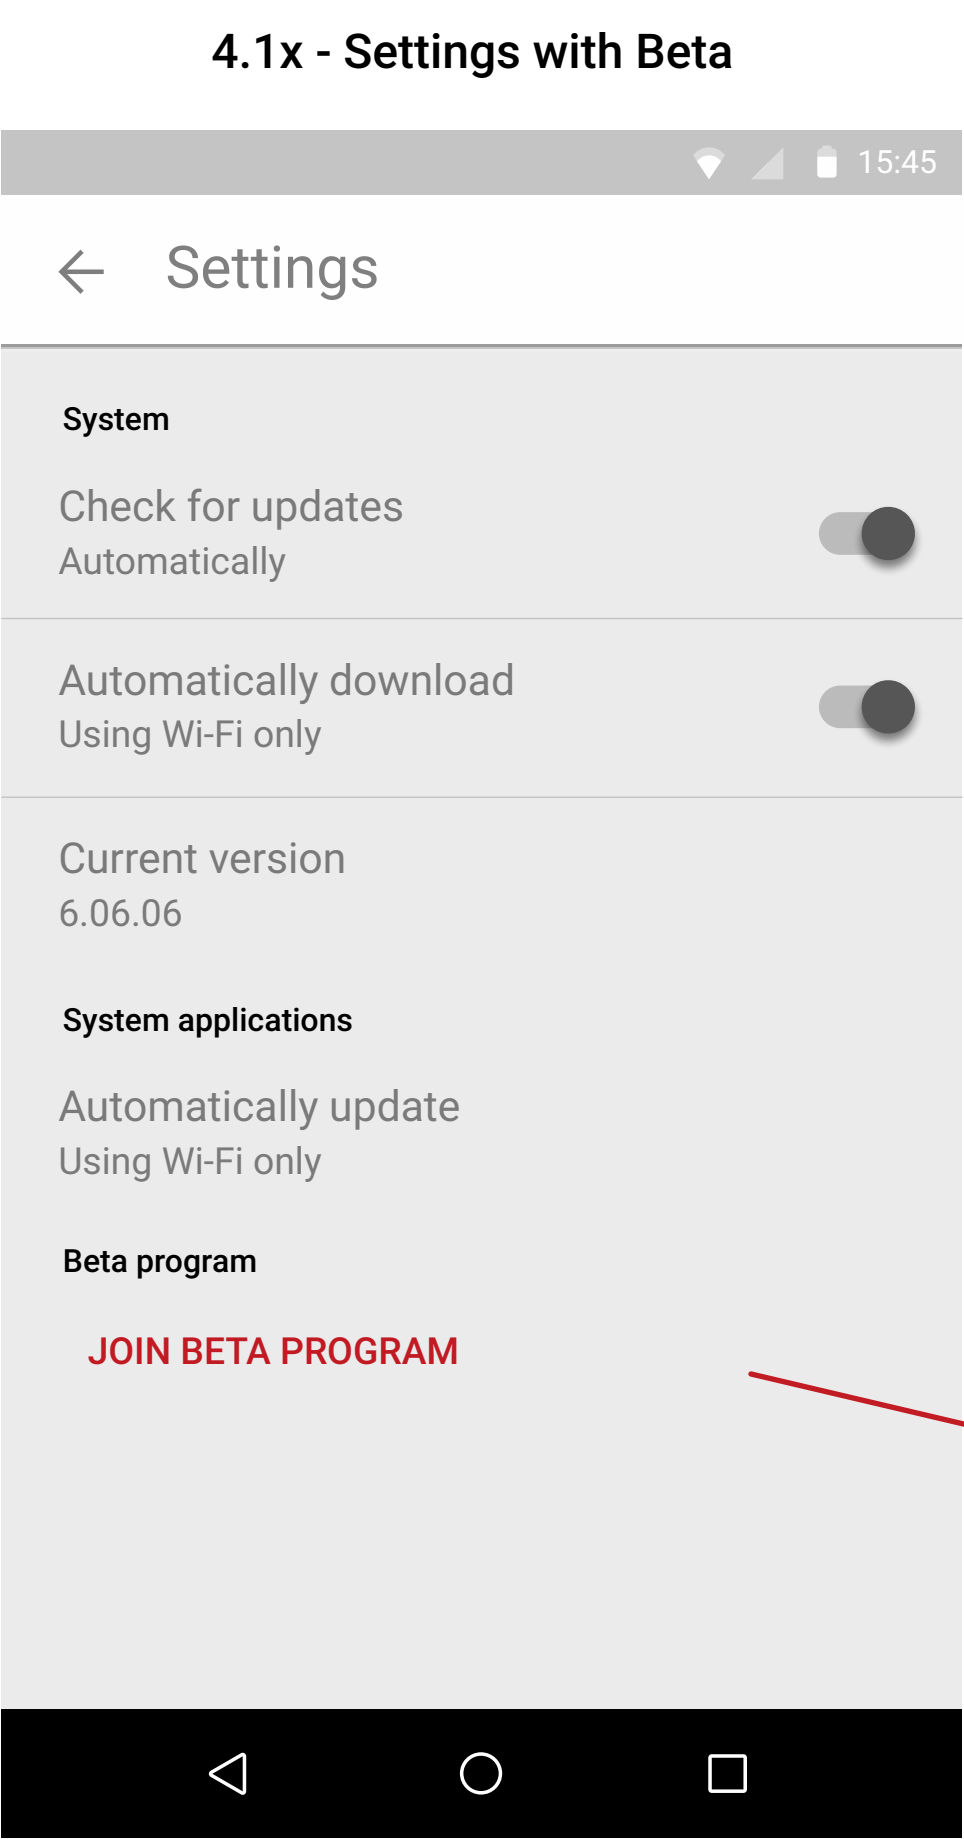

Beta program

There are three types of Beta's:

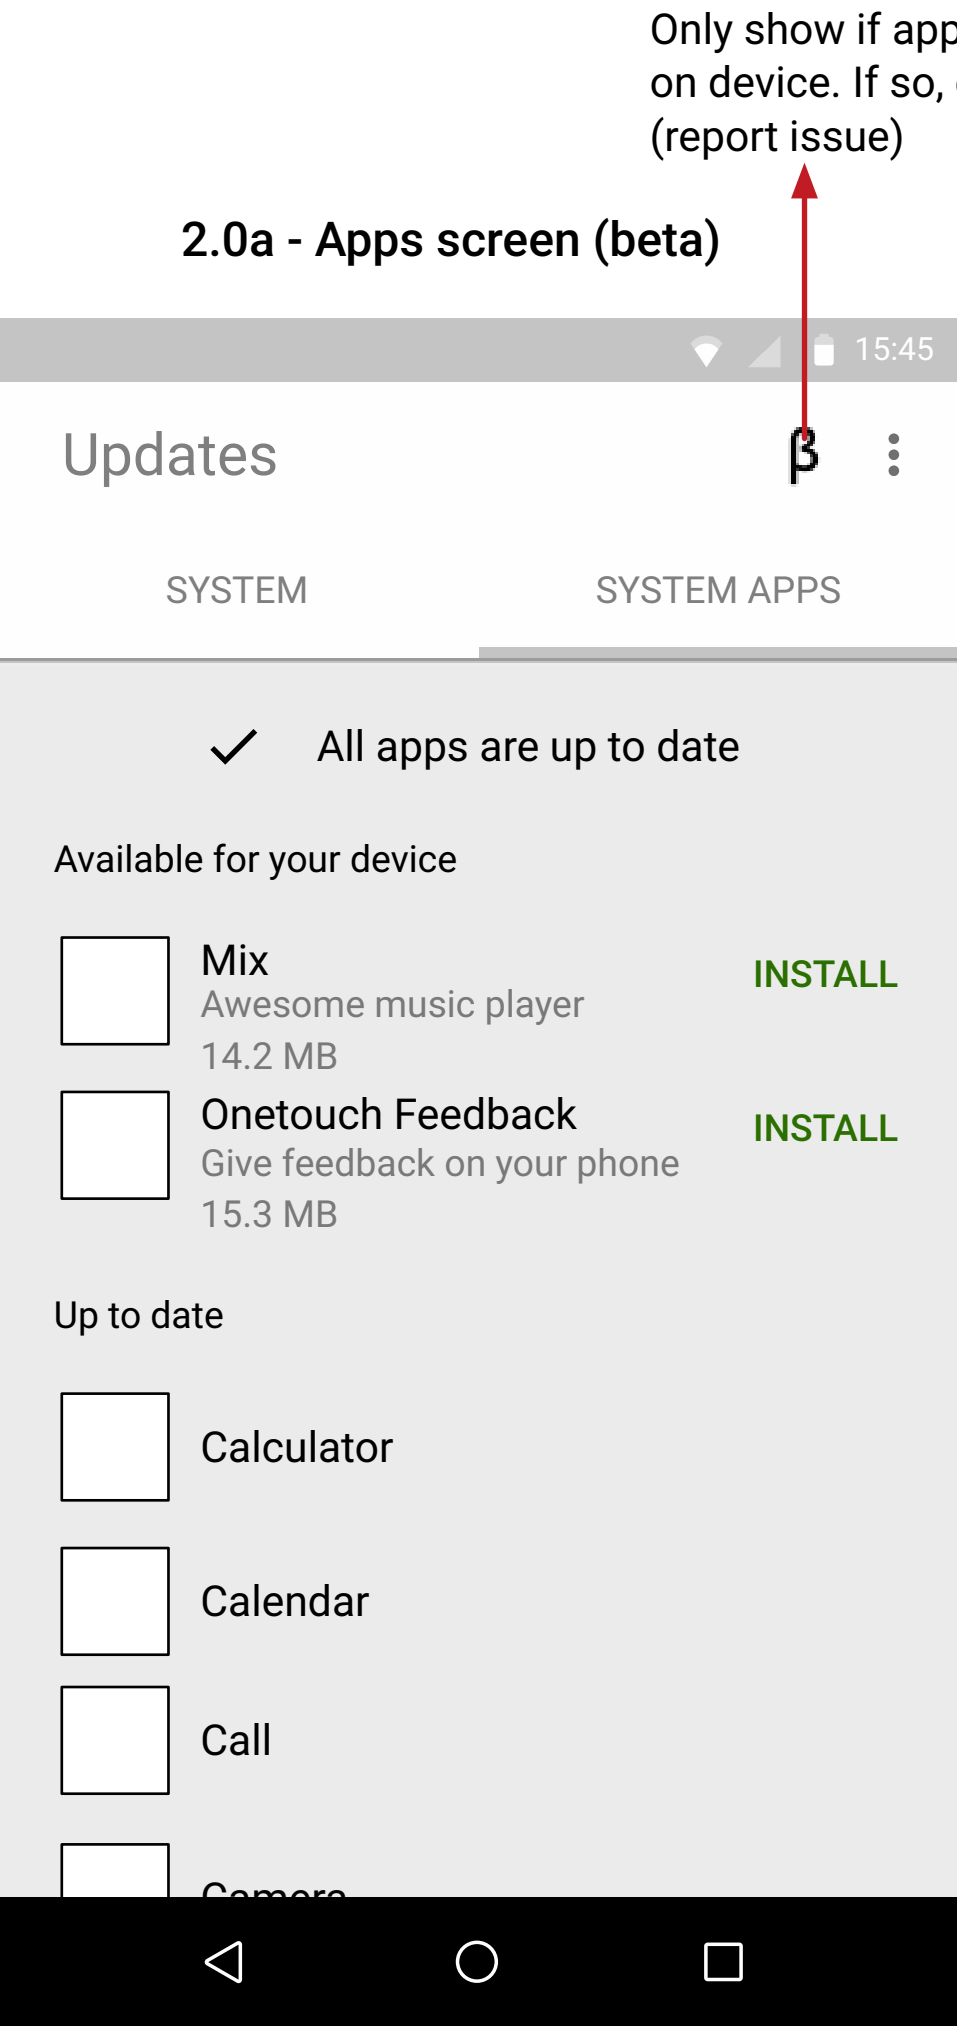

“Secret” - Users get updated by us, without their choice/option.
Selected based on criteria such as IMEI (e.g. *****064), Perso, Device, location and system language.
UX is same as normal updates, so no change.

“Beta program” - Sign up for Beta, and get ‘Beta’ notifications.
- Automatically moved to Beta.
- Some apps Beta optional.
Account are managed by User Care, but System Updates needs to communicate with this app to select users who signed up.

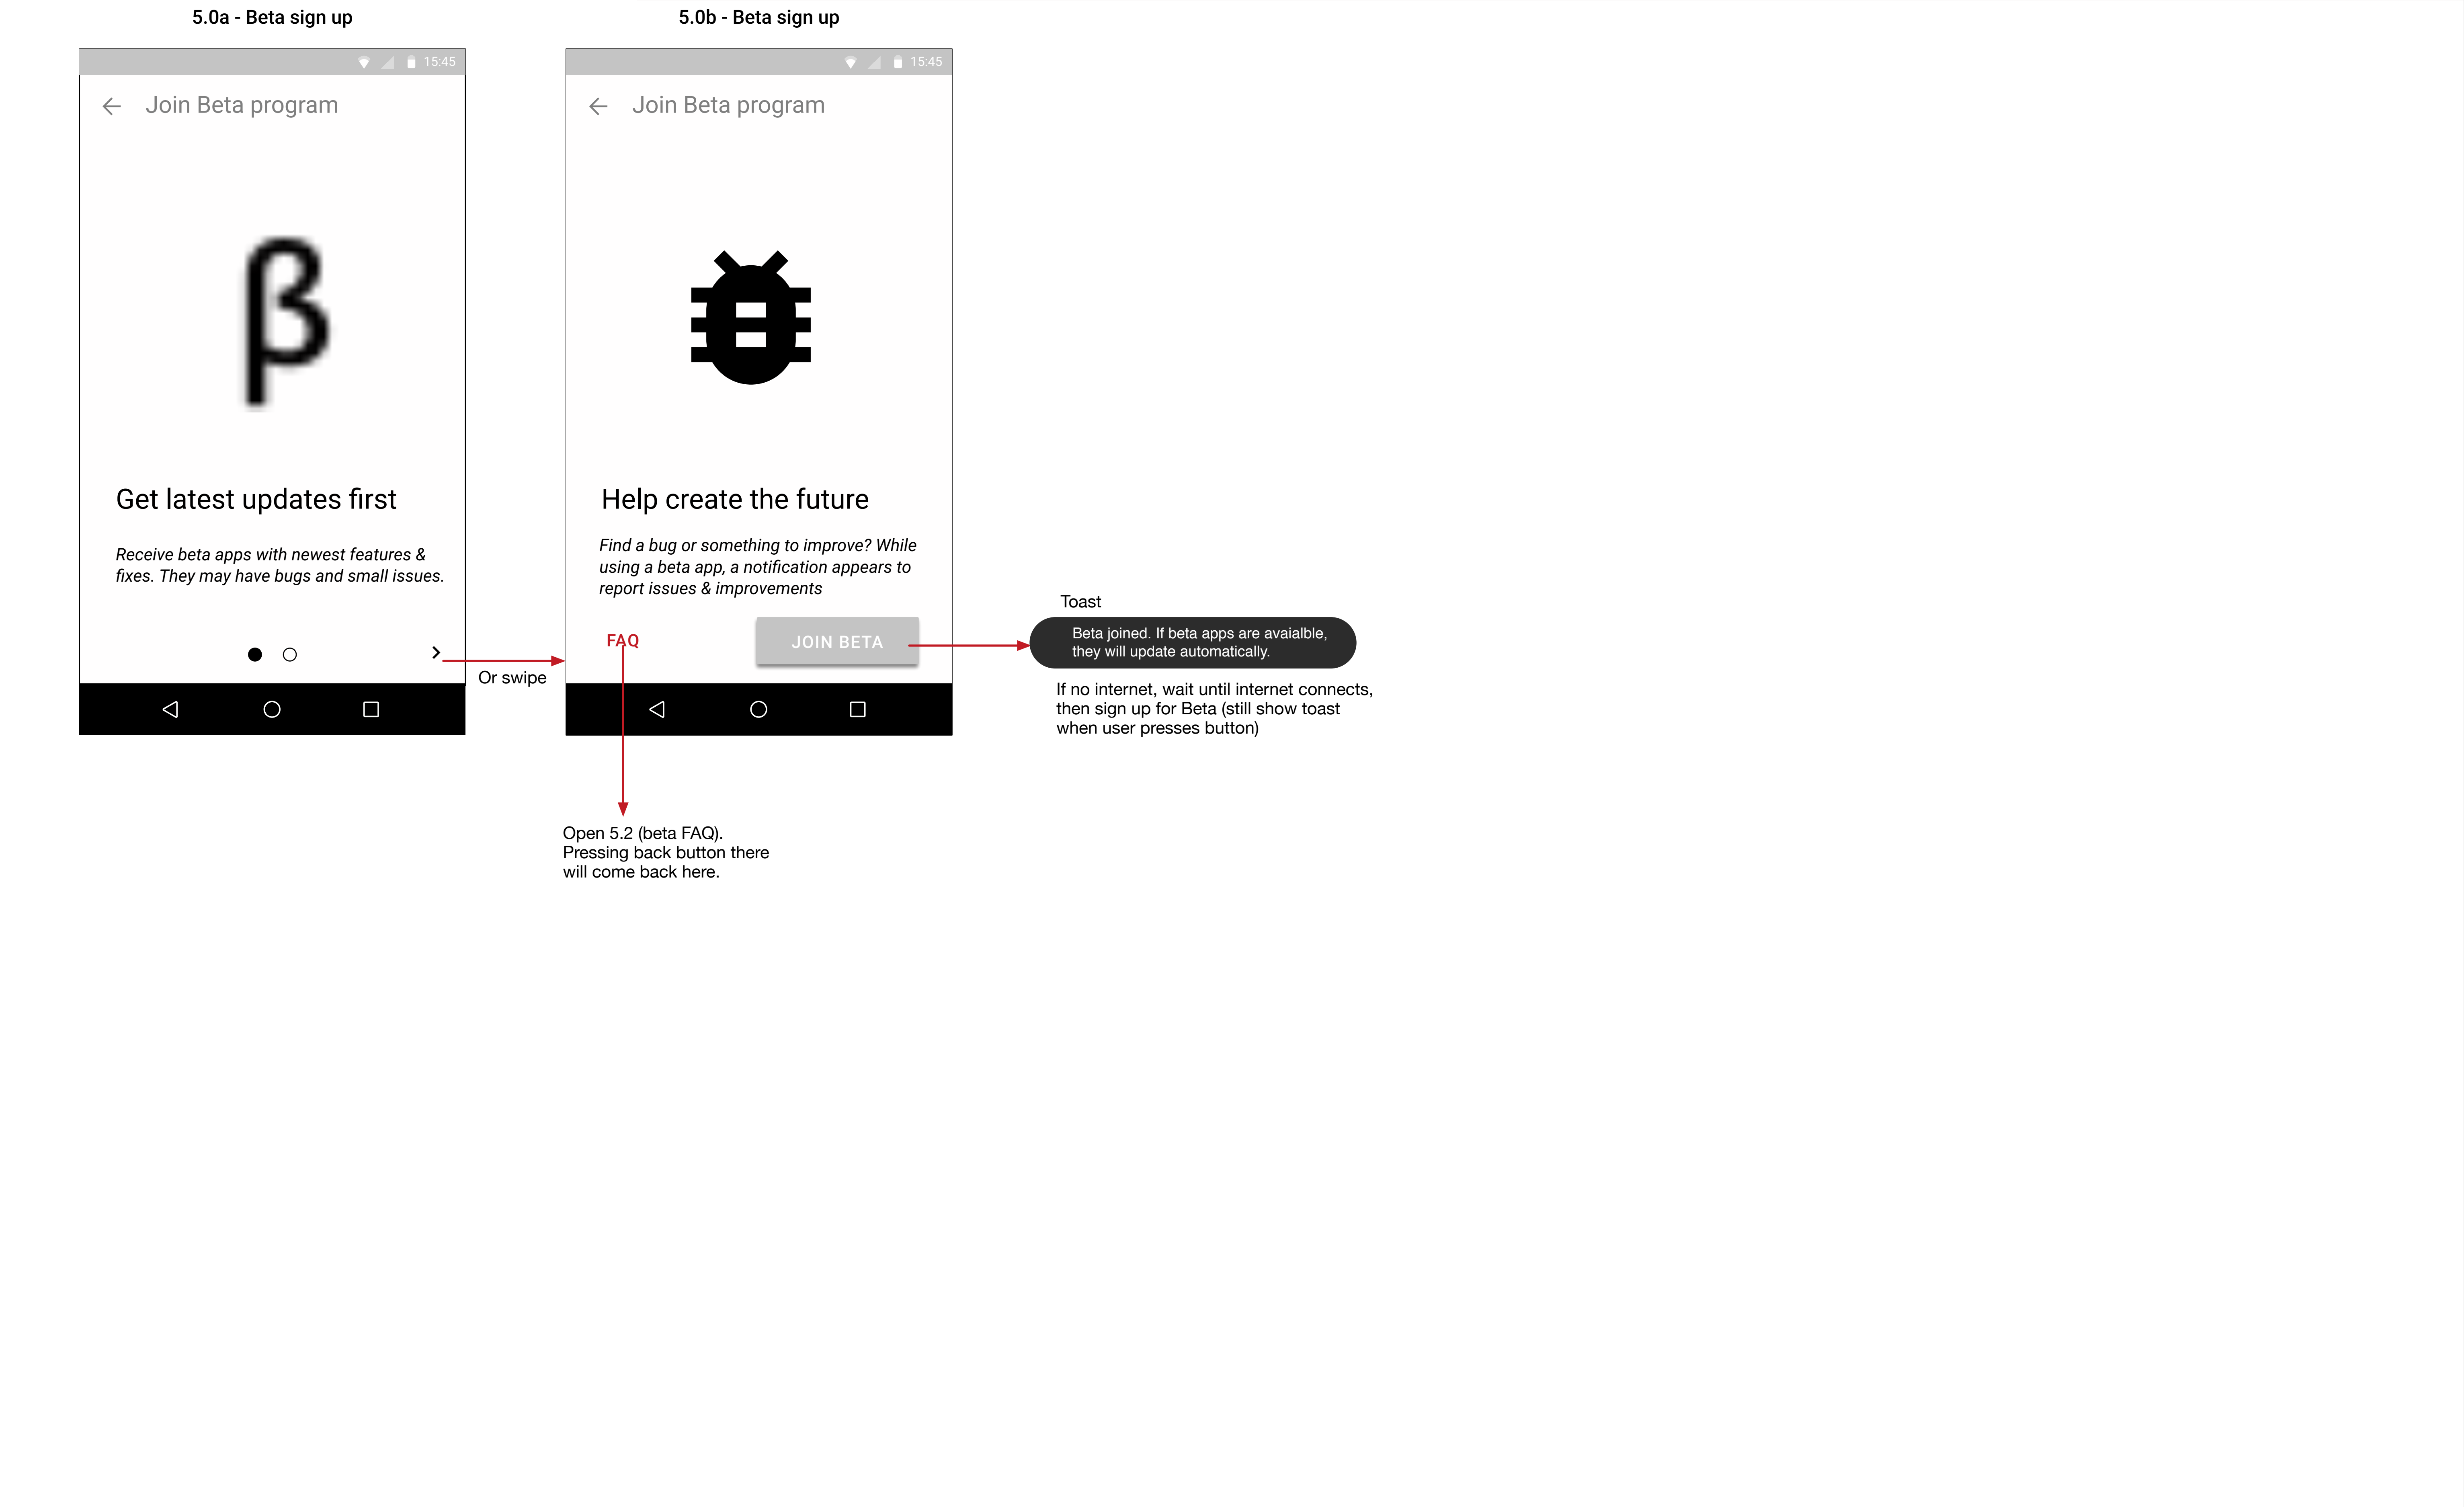

“VIP Beta program” - Same as beta program, but only for users that are manually added.

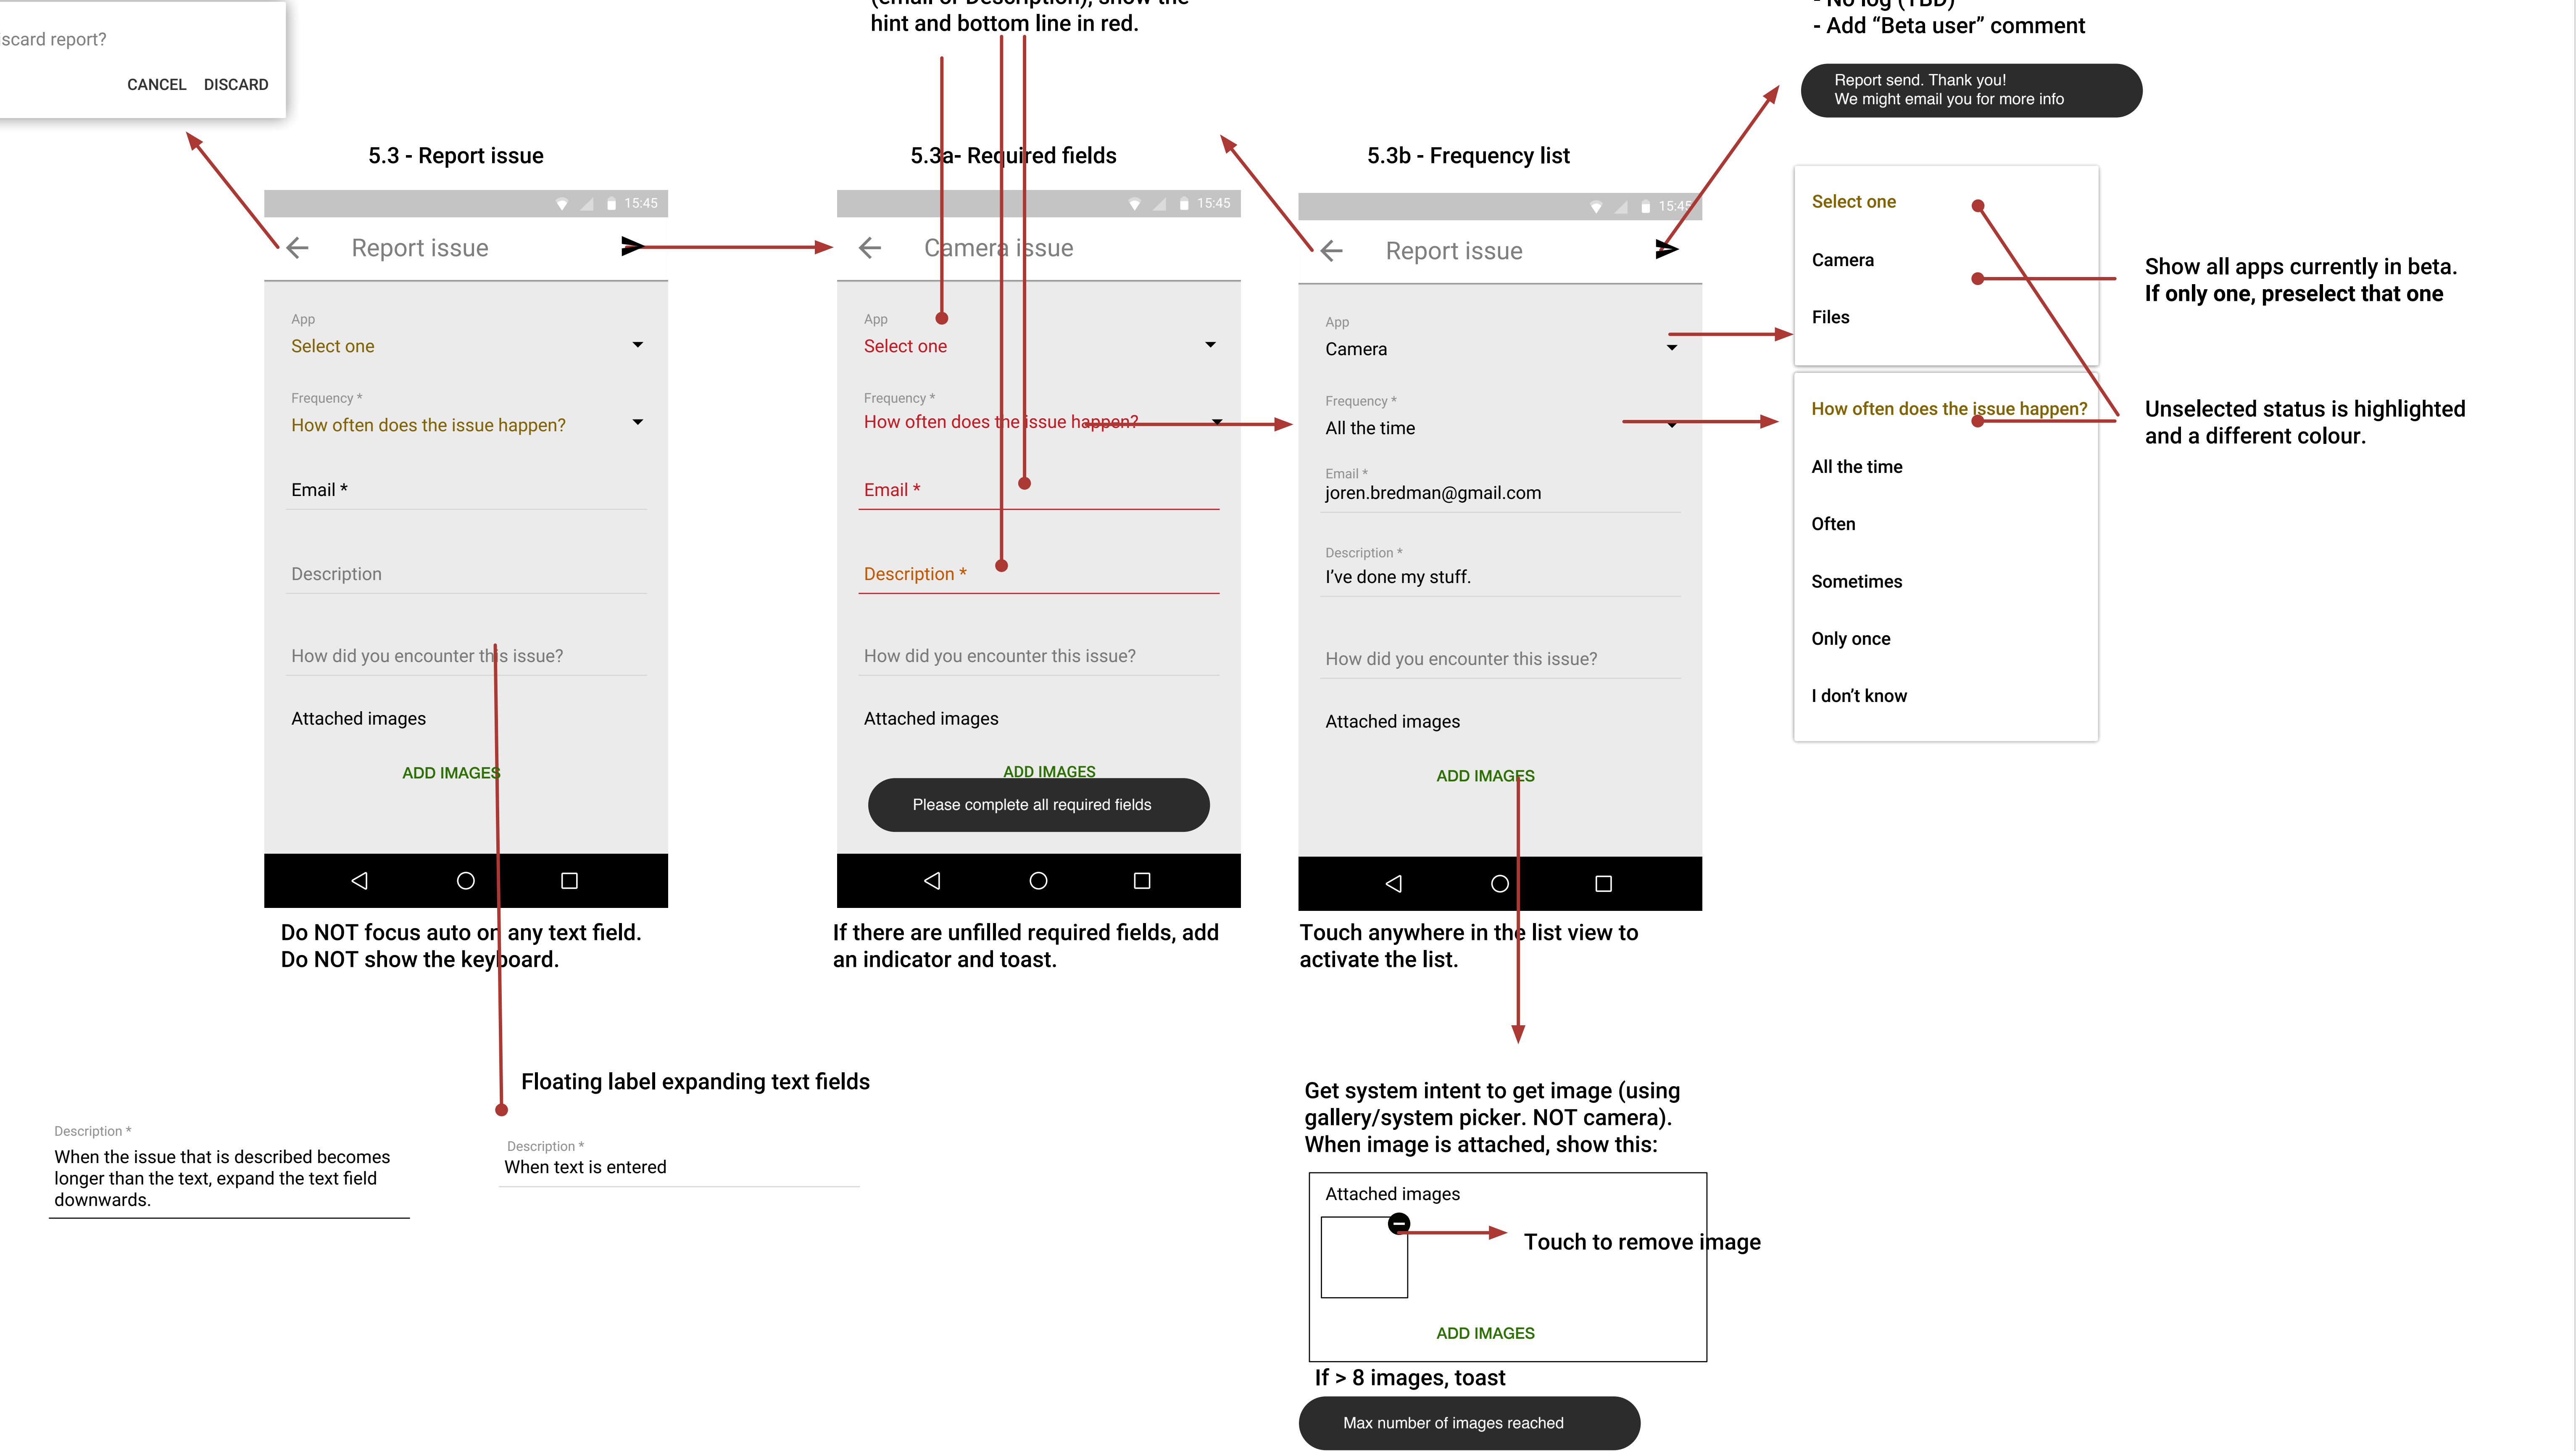

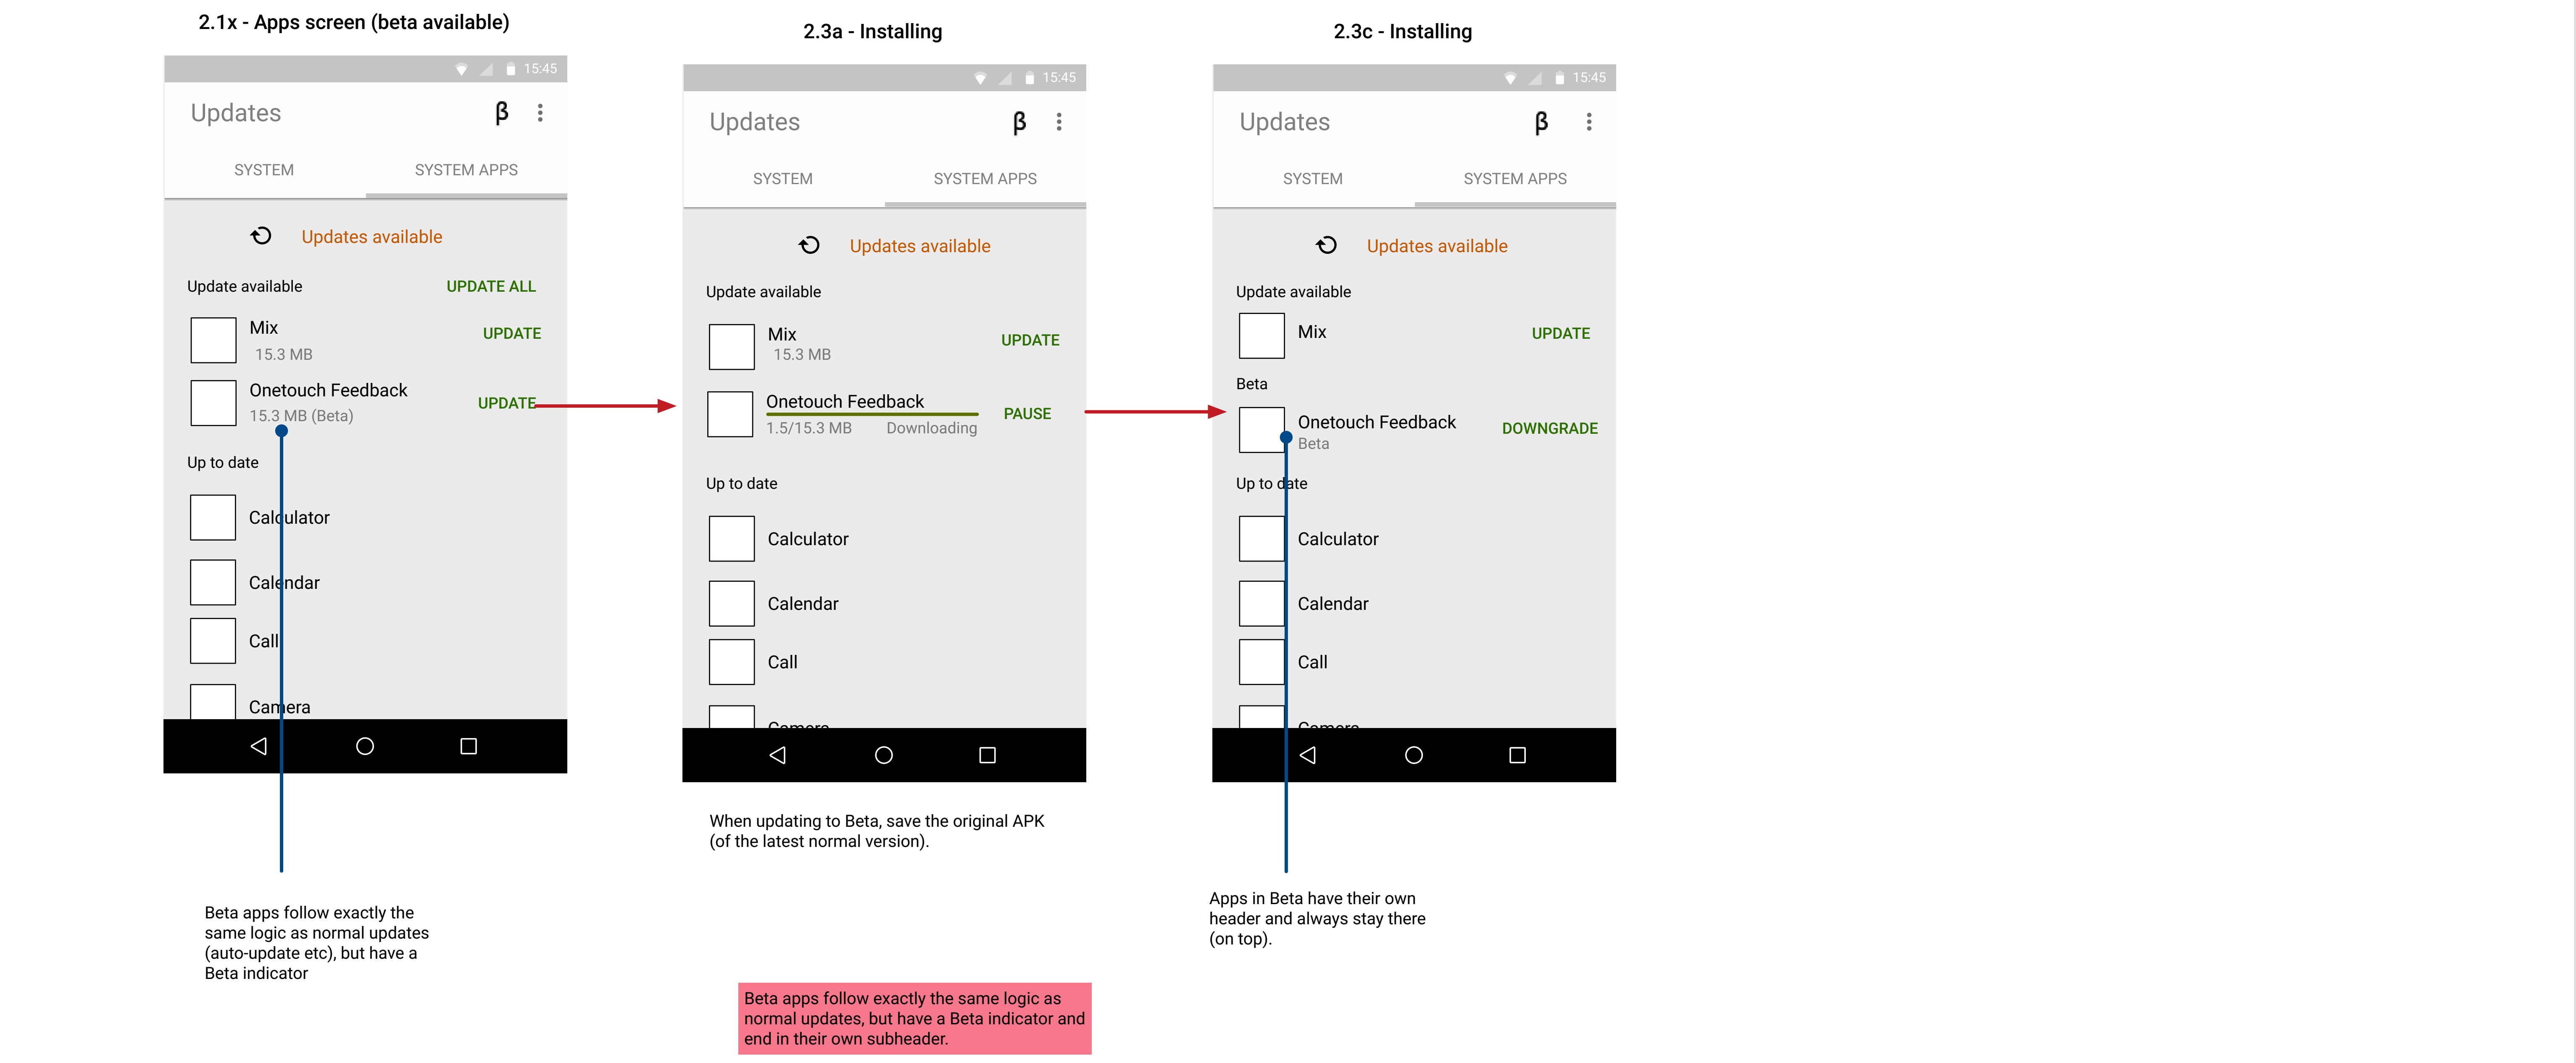

When opening the System apps tab for the first time and user is not signed up for (VIP) beta yet, fly in from below.

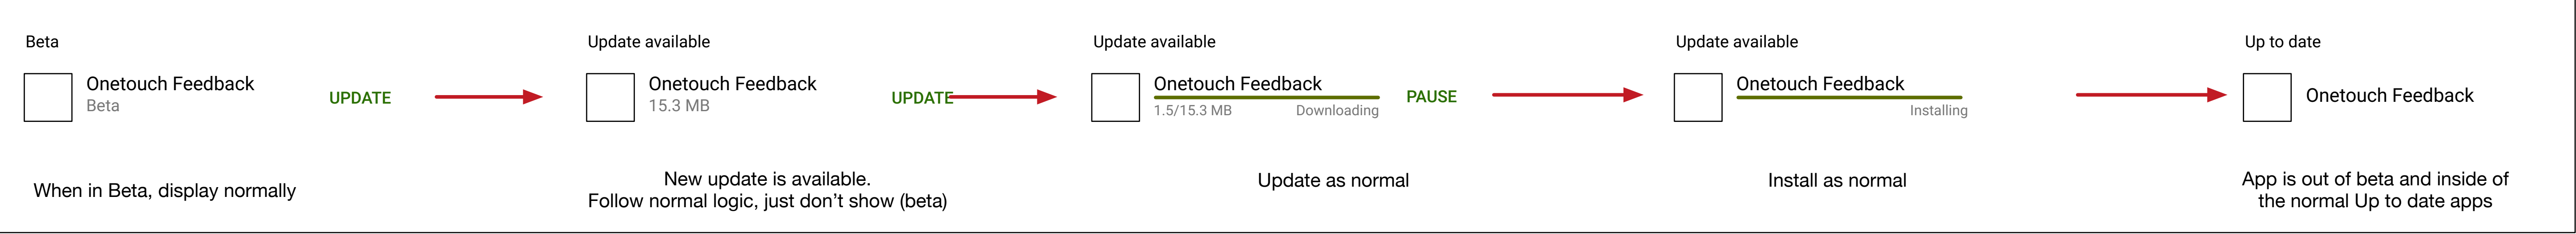

Only show if apps in beta on device. If so, open 5.3 (report issue)

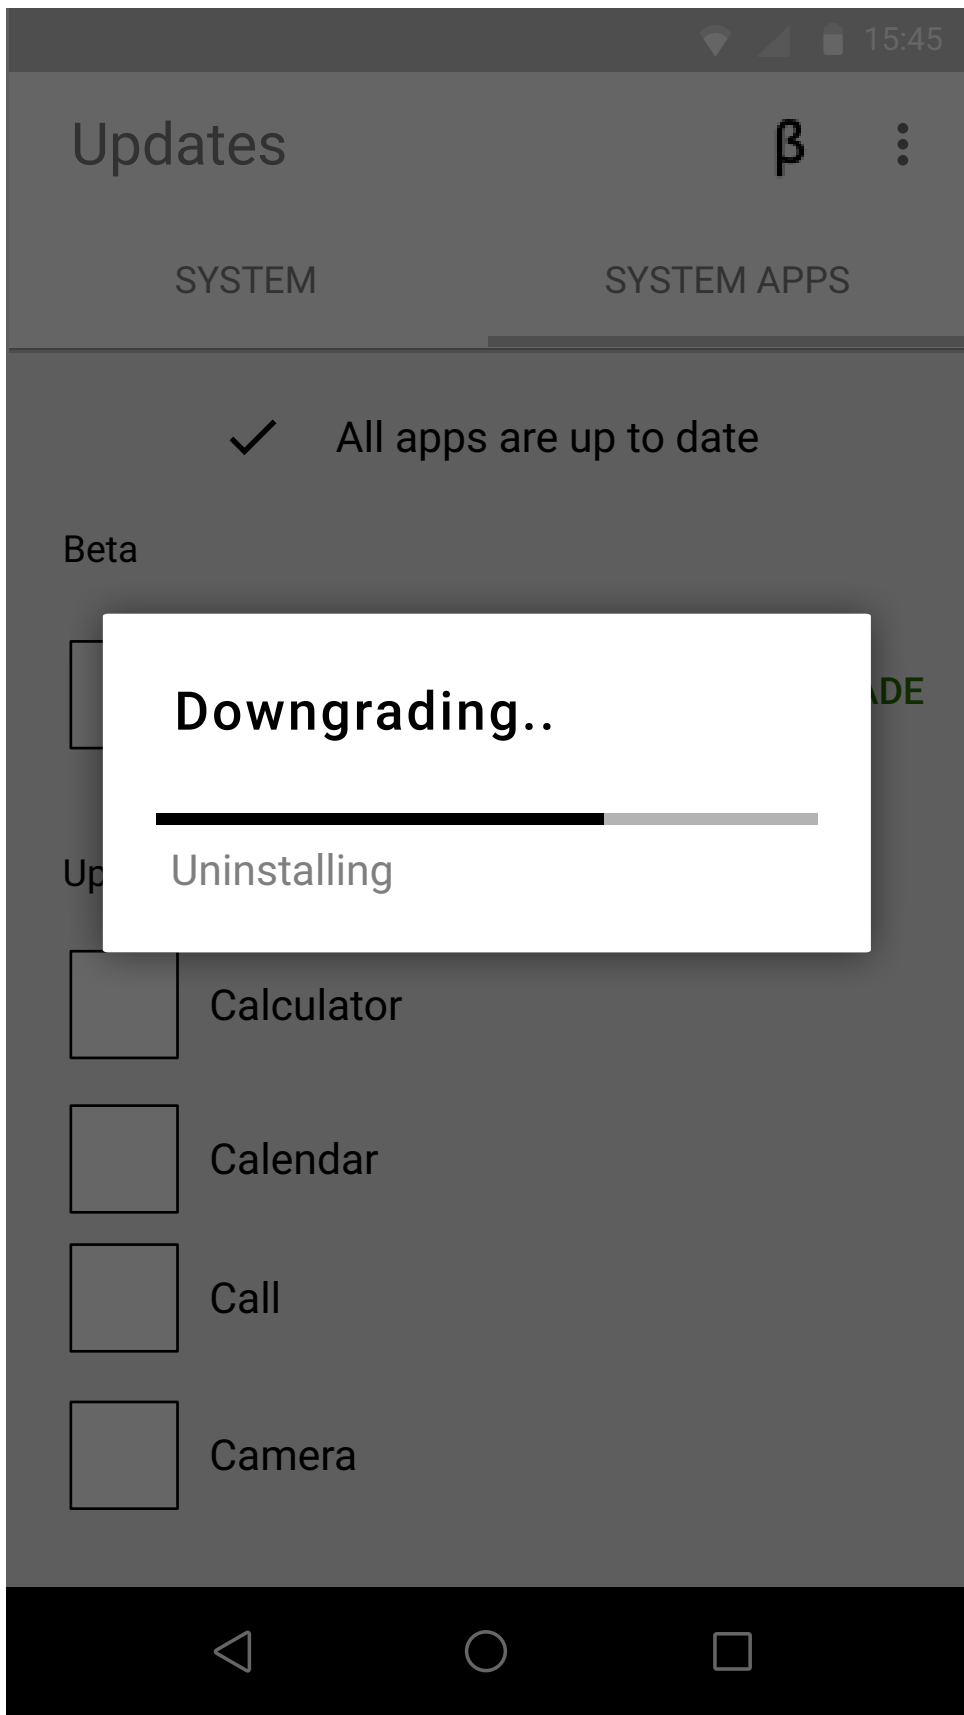

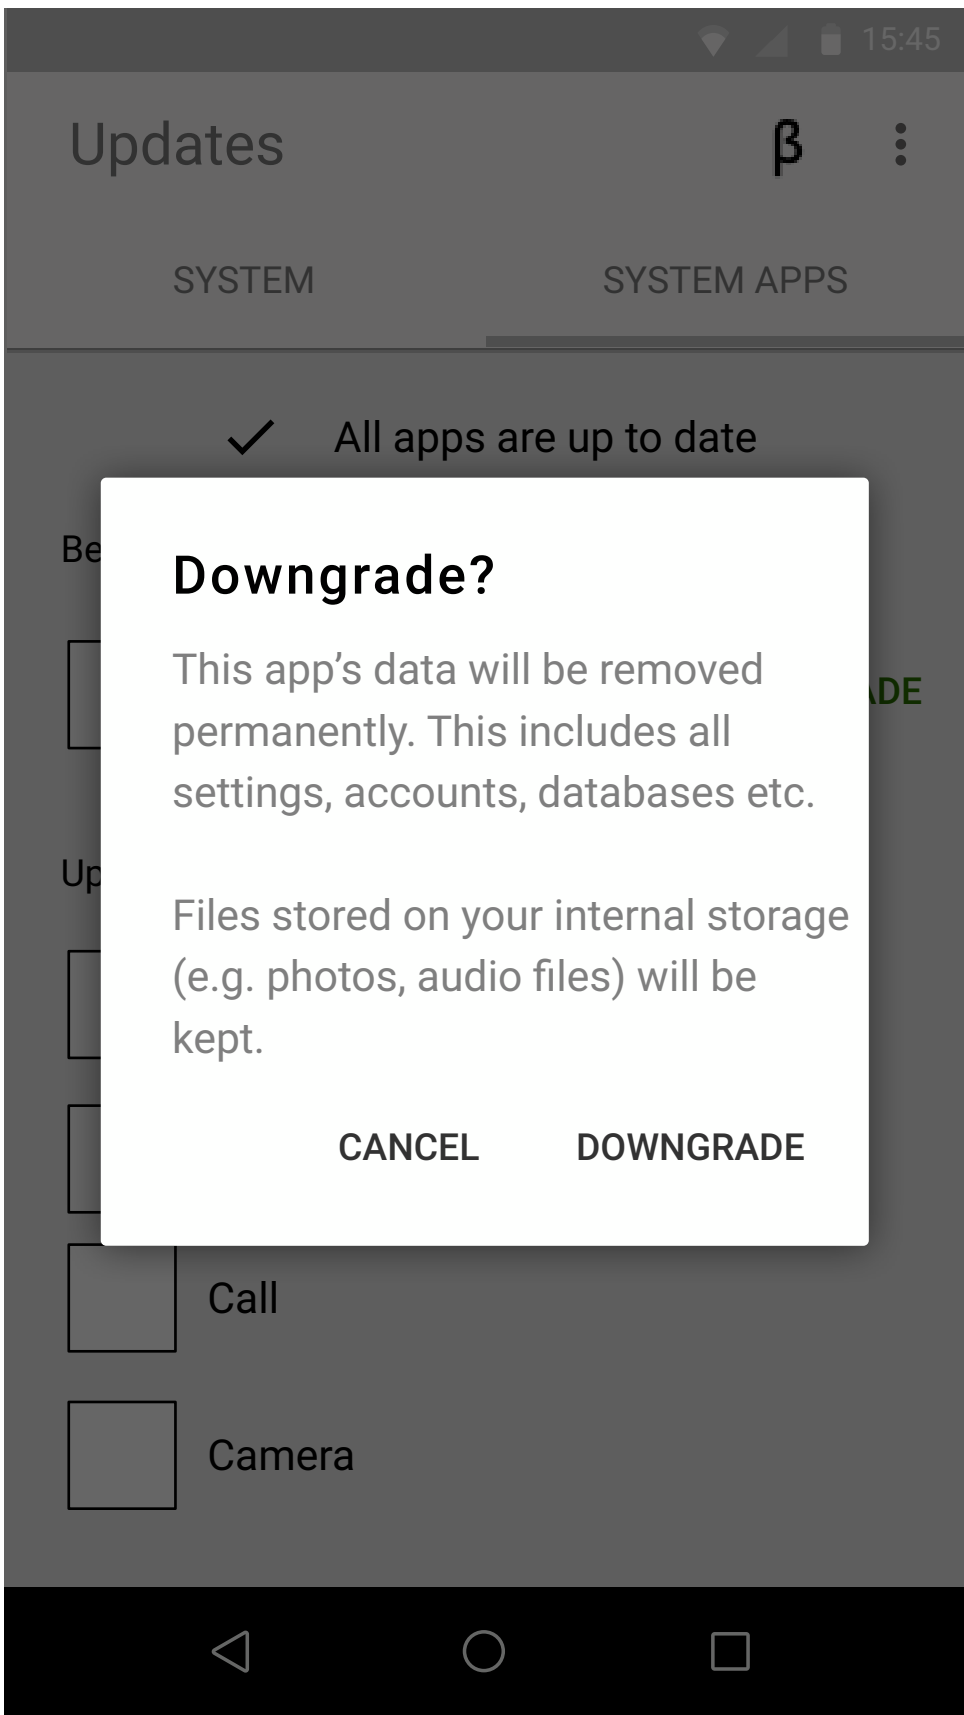

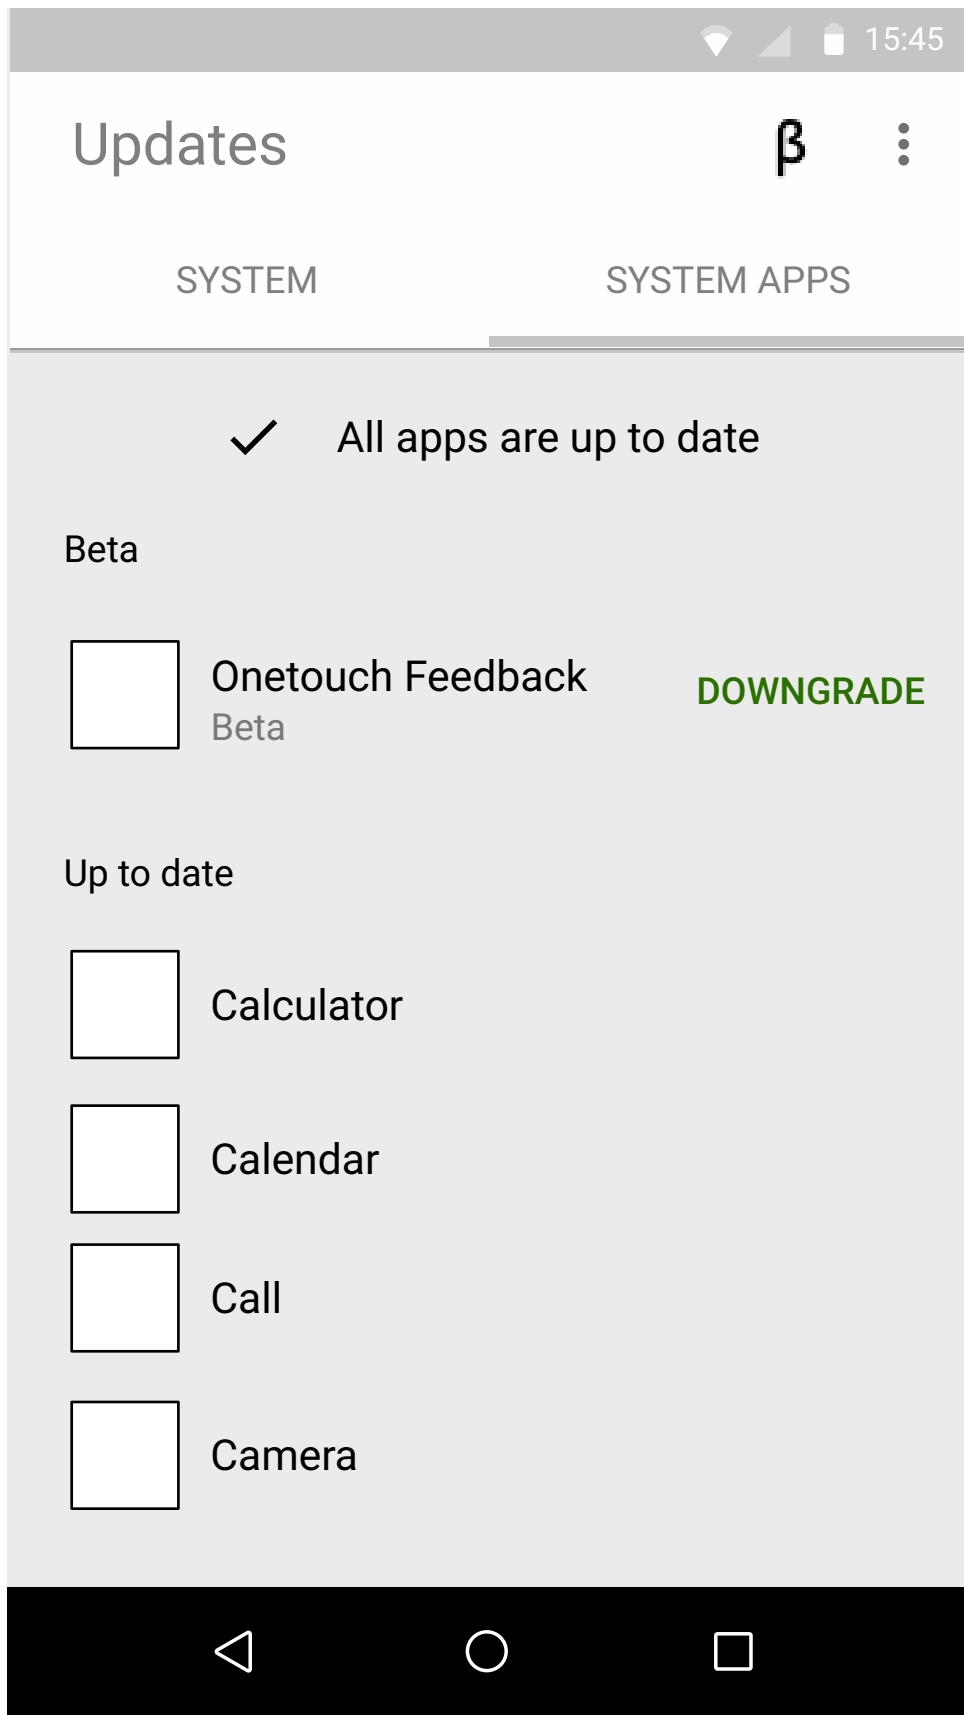

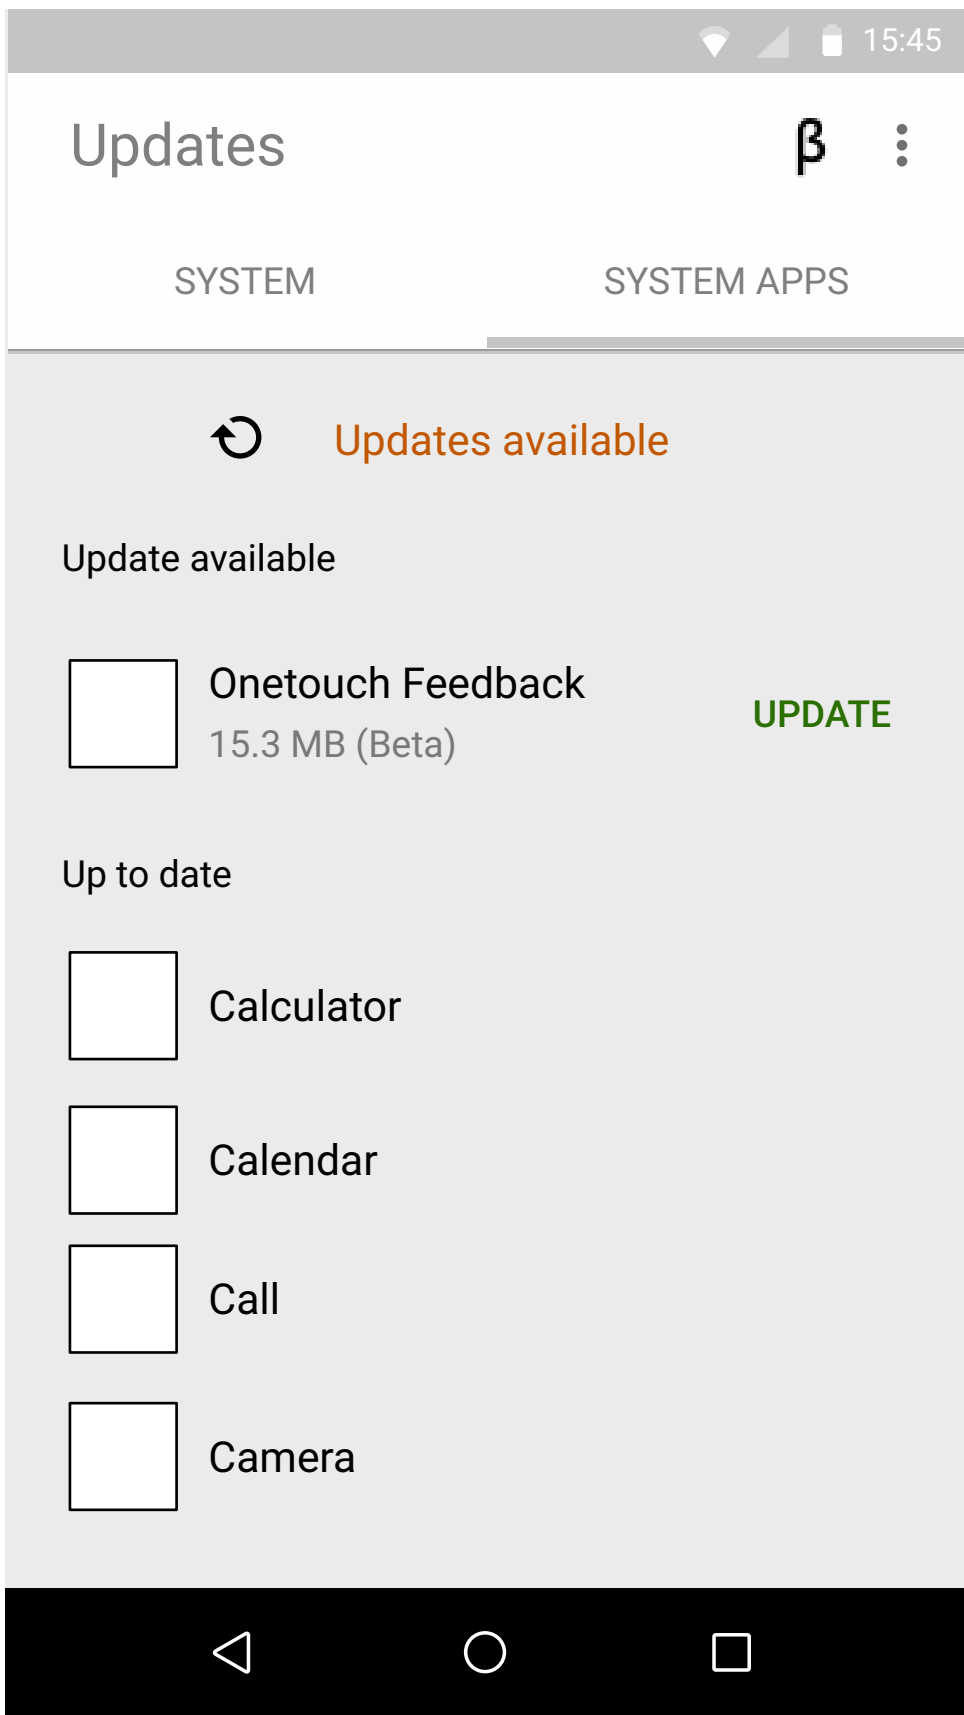

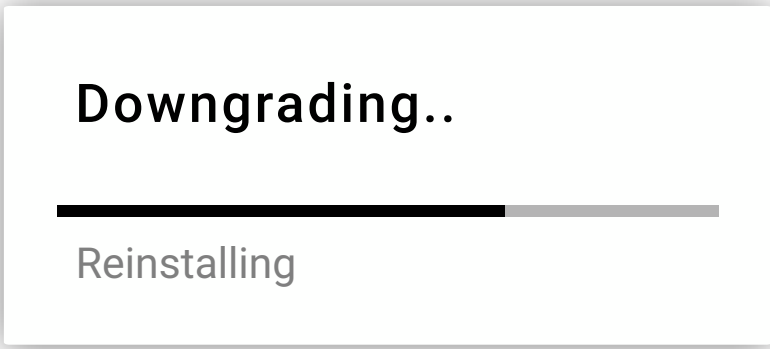

When a beta app ends, update a newer (non beta) version and update as normal

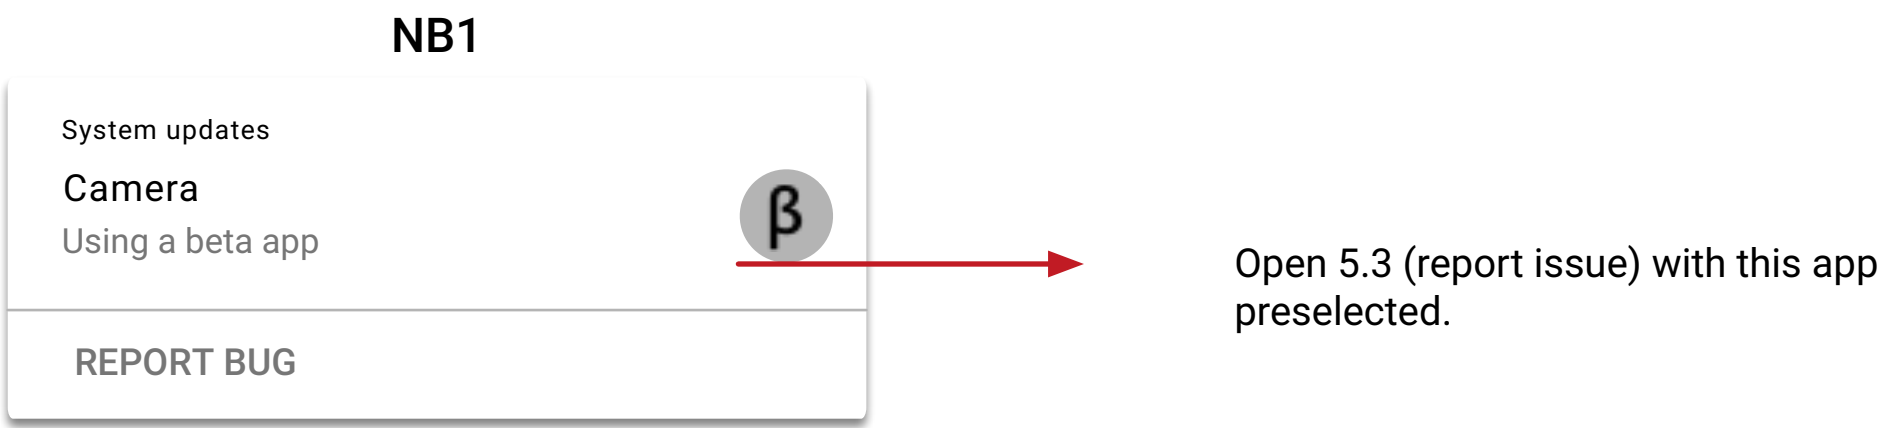

Uninstall and install latest “normal” version from the saved APK

After uninstalling/reinstalling, make Beta available again, but don't automatically update even if a Beta is available for this app.

IF Onetouch Feedback is installed, do NOT show this notification (TBD)

While a Beta app is being used with *low priority (does not make a sound)*

After the app is moved to background, show for 20 seconds, then disappear
